A new but small group developing within the Timber Branch—the Economics Unit—is undertaking, in co-operation with other specialists, feasibility studies to lead to the establishment of forest-based manufacturers in under-developed areas, to expand and improve the statistical information of the forestry sector, to provide market information, and to analyse the economic implications of Departmental practices and proposals as a means of strengthening the value of services provided.

Expansion currently under way or completed within 1965-66 by major firms dependent upon timber products, permits a prediction that wood utilization in Ontario will increase by at least 1,000,000 cords a year by 1968. This very favourable rate of capital formation, together with the present dynamic approach to forest management, is assurance that a viable, broadly based forest industry is developing on a sound business basis.

*Protection.*—The area under organized forest protection in Ontario totals 176,000 sq. miles and includes the main central band of accessible forests. This area is organized into 21 fire districts and further subdivided into 54 chief ranger divisions for the purpose of forest protection. South of this area, in the highly developed agricultural counties of southern Ontario, the municipalities are responsible for fire control; the vast inaccessible areas to the north of the fire districts, totalling some 190,000 sq. miles, do not support significant stands of merchantable timber and, except for communities or other special values, are not protected. Within the fire districts, agreements were in effect in 1965 with 214 municipalities and 225 timber licensees for the prevention and control of forest fires. An agreement was also in effect with the Federal Government for the protection by the Ontario Department of Lands and Forests of 873,000 acres of Indian lands in the province. The average annual number of fires for the 1950-64 period was 1,360 and the average annual burn was 152,623 acres.

Forest fire detection is accomplished through a 310-lookout-tower system and through aerial patrols as well as public reports. During the autumn of 1965, an infra-red aerial detection system was evaluated and will be further appraised in 1966 for the detection of lightning fires. Also in 1965, 300 northern Ontario Indians were recruited and trained to provide a readily available body of skilled forest fire fighters at various key centres. Prescribed burning for hazard reduction and site preparation purposes was carried out on 12 burns covering 1,560 acres, a program scheduled to be increased to 7,000 acres in 1966. A new water-bombing system utilizing the interior of aircraft floats to carry the water load was developed in 1965, a design that increases the water concentration in the drop pattern by several times over the existing external tank system on Beaver and Otter aircraft.

Water-bombing aircraft took action on 70 fires in Ontario in 1965. At the end of 1965, the fleet consisted of 41 aircraft—six turbo-Beavers, 24 standard Beavers, 10 Otters and one Super Widgeon. Five helicopters were leased during the fire season. The communication system included 174 ground stations, 308 lookout-tower radios, 15 patrol vessels, 538 mobile radio telephones, 1,046 portable fire-line radios and 41 aircraft radio telephones.

Forest pest control programs were carried out on about 10,000 acres of Crown owned or managed forest lands in 1965. The main effort was concentrated on the European pine sawfly, the white pine weevil and the white pine blister rust. Experimental work was carried out with the chemical Bidrin, a systematic pesticide, to test the effectiveness of protecting individual elm trees with it against the conventional spraying method for controlling Dutch elm disease.

**Manitoba.**—The central administration of Manitoba's forests is organized into two Branches—Forest Management and Forest Protection. Each is in charge of a director and is a Branch of the Department of Mines and Natural Resources. The Province is divided into eight regions, each under a regional supervisor who is responsible to the Branch directors.

The Management Branch co-ordinates control measures for the propagation, improvement and management of the forests, the harvest of forest products, and forest inventory surveys. Two nursery stations are maintained to supply stock for reforestation of denuded Crown land and some natural seed areas have been established for nursery stock. Seedlings are supplied to farmers for shelterbelts and woodlots and to commercial Christmas tree producers. The program of forest stand improvement comprises thinning, clearing and chemical spraying to remove undesirable species and encourage growth of preferred trees. Forest inventories cover 3,000 to 4,000 sq. miles annually and on the basis of these inventories working plans with annual allowable cuts on a sustained-yield basis have been brought into operation.

Timber-cutting rights are awarded by Forest Management Licences, Timber Sales and, in certain cases (particularly for salvage operations), by Timber Permits. Forest Management Licences may be granted for periods of up to 20 years and are renewable. Timber Sales may be for varying periods from one year upward and Timber Permits for periods of up to one year. At present, one long-term Pulpwood Berth with an area of 2,745 sq. miles and 10 long-term Timber Berths, all granted prior to 1930, are in force. A second Pulpwood Berth agreement was signed early in 1966, covering the construction of a pulp mill and sawmill at The Pas and debarking units placed near Arnot in northern Manitoba.

The area of the province under forest fire protection is 120,000 sq. miles with zones of priority established in the less accessible areas. Fires are detected through a comprehensive network of lookout towers and supporting air and ground patrols, all tied together by radio and Departmental or public telephones. Two Canso water-bombers and two helicopters are rented for the worst of the fire season to supplement the aircraft of the Manitoba Government Air Service.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas in the province. The Department co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases. Public education in the fields of fire prevention and forest conservation is carried out and use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

**Saskatchewan.**—The forests of Saskatchewan are located mainly in the northern half of the province and cover 117,738 sq. miles, or 53 p.c. of the total land area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of six divisions—Administration, Fire Control, Forest Management, Forest Research, Inventory and Silviculture—is responsible for developing and evaluating forest policies and management programs based on the findings of inventory and research. The responsibility for carrying out such policies and programs is borne by the various regional administrative authorities. For purposes of resource administration, the province, with the exception of the most northern portion, is divided into three regions, each under the supervision of a regional superintendent. The regions are subdivided into conservation officer districts which vary in size according to resource base and population to be served. In the most northern part of the province, because of various special programs with northern residents, resource administration is the responsibility of the Northern Affairs Branch of the same Department. Close liaison is maintained between the Forestry Branch and the various regional authorities.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 72 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by three aircraft on regular patrol duty during the high-hazard periods. A group of smoke-jumpers, trained to parachute on remote fires, is in constant readiness during the fire season and, if necessary, takes immediate suppression action which it maintains until relieved by overland crews. Northern Saskatchewan's communication system, with more than 990 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities are assisted by the use of helicopters and aircraft equipped for water-dropping.

**Alberta.**—The 157,595 sq. miles of provincial forest in Alberta are administered by the Alberta Forest Service of the Department of Lands and Forests at Edmonton. The Service, headed by the Director of Forestry, is composed of five Branches—Administration, Forest Protection, Forest Management, Forest Surveys and Planning, and Forestry Training.

For ease of administration the forest area has been divided into 11 Forests, each responsible for the forest within its boundaries. These Forests are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his superintendent. Each Forest staff includes: forest superintendent, fire control officer and assistant, forester, mechanical foreman, carpenter foreman, equipment operators, scalers, land-use officers, radio operators, clerks, stenographers, and seasonal help such as standby fire crews, lookout men, general labourers and construction crews. Some Forests have minimum security crews that are employed in forest management, protection and construction projects.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, maintains the equipment inventory and deals with personnel.

The Forest Protection Branch has charge of all phases of protection including prevention, detection, suppression and use of forest and prairie fires. The Branch also plans, supervises and executes the construction and maintenance of the road and building programs and supervises the radio communication facilities.

The functions of the Forest Management Branch include the acceptance and approval of management and annual operating plans prepared for leased and licensed Crown lands, implementation of management plans prepared by the Department, supervision of proper land-use practices and the disposal of Crown timber. This extends to all phases including processing of timber applications, selection of timber to be sold, cruising of merchantable timber, inspection of cutting areas to ensure proper logging and utilization practices, scaling of forest products, collection of dues and fees and reforestation programs for areas denuded by cutting and fire. It is also responsible for the implementation and supervision of the new timber quota system.

The Forest Surveys and Planning Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; develops and supervises recreational area plans; provides regulation of geophysical activities in the forest area; and provides technical drafting and mapping services to the Forest Service and the general public.

The Forestry Training Branch prepares training material and conducts training programs for Departmental personnel and other persons concerned with activities of fire control, forest management, forest protection and conservation. It also provides the facilities and instruction for the second year of a two-year forest technology course provided by the Northern Alberta Institute of Technology. The Branch organizes and supervises the activities of the Junior Forest Warden Clubs.

One Forest and part of two others are included in the Rocky Mountains Forest Reserve. This area is administered by the Alberta Forest Service but decisions of the Director of Forestry are based on policies of wise watershed regulation formed by the Eastern Rockies Forest Conservation Board. The Board comprises one federal and two provincial members. This reserve includes part of the headwaters of the main Prairie Provinces river system. Research in general is carried out by the federal Department of Forestry and Rural Development, which maintains the Kananaskis Experiment Station.

**British Columbia.**—The productive forest land of British Columbia is inventoried (1958) at 208,411 sq. miles with an additional 59,227 sq. miles of forest land classed as non-productive. Of the productive area, immature timber occurs on 95,739 sq. miles; 84,275 sq. miles carry mature timber estimated at 251,000,000 M cu. ft.; and 28,397 sq. miles are unclassified, including areas of burn, cut-over or windfall not yet restocked.

Canada's annual production of lumber, which reached a record 100,000 M ft. b. m. in 1955, British Columbia contributes about 68 p.c. of the total and 72 p.c. of the softwood. Although the Canadian economy depends about 96 p.c. on its hardwood lumber, most two thirds of the softwood is exported, making this commodity one of the country's major export items.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision into Ranger Districts, of which there are approximately 25 in each Forest District. Twelve directional, servicing or policy-forming Divisions constitute the head office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual scale of approximately 1,533,000 M cu. ft., the total inventory would appear sufficient to support current needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. The over-cut coast (wet belt) forests now account for about 56 p.c. of the total forest cut each year and the interior for 44 p.c. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree Farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Pulp Harvesting Forests and Public Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Of major interest is the Pulpwood Harvesting Area plan, unique in North America, which calls for the integration of a 'sawlog' economy with a new pulp industry; five of these Areas have now been established—three in Prince George Forest District, one in Prince Rupert Forest District and one in Kamloops Forest District. Management, silviculture, roadbuilding and protection on such Areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

Forest fire prevention techniques and organization for effective forest fire suppression are vital aspects of planned sustained-yield management. A greatly expanded pulp industry, added to the long-established logging and sawmill industries, has increased the necessity for more adequate fire control. Extensive use is made of aircraft under various terms of contract. Air tankers and fire-spotter aircraft are employed during the fire season and helicopters and other aircraft are employed under contract for patrol duties and for the transport of fire suppression crews. The rugged topography and the many remote and sparsely populated areas of the province demand the availability of a variety of transportation methods to tie in with fast discovery and early attack on all forest fires.

Close liaison with the federal Department of Forestry and Rural Development, through facilities at Victoria and Vernon, provides detailed information on insect and fungal enemies of the forest and on fire research.

### **Subsection 3.—The Pulp and Paper Research Institute of Canada\***

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University,

\* Prepared by B. W. Burgess, Secretary, Pulp and Paper Research Institute of Canada, Montreal, Que.

it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute occupies a building on McGill campus erected by the pulp and paper industry and a building at Pointe Claire on the western outskirts of Montreal constructed by the Government of Canada. The Institute's facilities include: organic and physical chemistry, physics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp and paper. It has a staff of about 195.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 42 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood and by a grant from the Association. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles and for major engineering research and development projects which individual pulp and paper companies would find difficult to justify if the costs were not shared. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 40 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The Head of the Institute's Wood Chemistry Division, who is also the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin and hemicelluloses. The Head of the Institute's Physical Chemistry Division, also a Professor in the McGill Chemistry Department, supervises graduate student work in polymer, surface and colloid chemistry with particular reference to those aspects that pertain to the physics and chemistry of pulp and paper. An Associate Professor of Chemical Engineering at McGill, who is a consultant to the Institute, directs graduate students in a variety of chemical studies. In addition, the Head of the Institute's Wood and Fibre Physics Division, who holds a teaching appointment in McGill's Department of Mechanical Engineering, supervises graduate student investigations on such subjects as supercalendering of paper and frictional processes in polymeric systems. Other staff members who hold concurrent honorary positions at McGill as Research Associates assist in this student program.

The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

# CHAPTER XIII.—MINES AND MINERALS

## Section 1.—Canada's Mineral Industry, 1867-1967\*

Canada's mineral industry takes pride in its record of growth and expansion over the past hundred years, although its history reaches back to the activities of the earliest explorers. Samuel de Champlain, early in the 17th century, discovered silver and copper in what is now Nova Scotia and, later in that century, in 1672, Nicholas Denys noted the existence of coal on Cape Breton Island. At about the same time, Sieur de la Portardière began the first examination of bog iron deposits in Canada in the St. Maurice Valley of Quebec. In the 18th century, exploration activity increased and a number of mining operations were undertaken—coal was produced in Cape Breton and iron ore for iron-smelting operations was produced in several communities of Quebec. However, it was not until the 19th century that development of Canada's mineral resources got under way on a significant scale and by the middle of the century there had been sufficient mineral activity to give promise of a major resource industry. With the founding of the Geological Survey of Canada in 1842 began the systematic examination of the country's mineral resources and since then the Survey's records and reports have served as important guides to prospectors and exploration companies in their search for new mineral deposits.

By the time of Confederation a number of discoveries had been made in Eastern Canada but the most spectacular was the discovery of gold in British Columbia in the 1850s. Although the gold rush on the Fraser and Thompson Rivers was relatively short-lived, thousands of people flocked into British Columbia in the 1850s and the 1860s as a direct result of gold-mining activity. Settlement, railway construction, agricultural expansion and growing industrialization have followed many other mineral discoveries. Reference to even one or two notable examples of mineral discoveries in each decade of the past century illustrates the importance of the mineral industry in the economic development of Canada. In the 1860s a thriving oil industry was established in southwestern Ontario, following an initial discovery near Petrolia in the late 1850s. Asbestos was

\* Prepared under the direction of Dr. C. M. Isbister, Deputy Minister of the Department of Energy, Mines and Resources, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch. The statistical tables included throughout the Chapter were prepared in the Industry Division of the Dominion Bureau of Statistics. Figures for 1965 (except those for coal) are preliminary.

discovered in the Eastern Townships of Quebec in 1877 and Canada has since been one of the world's leading asbestos producers. In 1883, nickel-copper ores were found at Sudbury in Ontario and Canada has since been the world's leading nickel producer and one of the major copper producers. A number of gold, silver and base metal discoveries were made in southern British Columbia in the 1890s, including the great Sullivan mine, following an initial copper-gold discovery at Rossland in 1889. In 1896, the famous Klondike discovery in the Yukon precipitated the world's most spectacular gold rush. At the turn of the century, northern Ontario was the focus of attention when silver ore was discovered at Cobalt. This was followed by the discovery of many other major mining areas including the Porcupine gold mining camp in 1909 and Kirkland Lake in 1911. While exploration was continuing in northern Ontario and Quebec, leading to the Noranda copper find in the Rouyn district in 1921, oil and gas exploration in Western Canada resulted in the discovery of the important Turner Valley field near Calgary in 1913. The introduction of aircraft in mineral exploration in Northern Canada in the 1920s was a key factor in the discovery of pitchblende, a source of radium and uranium, at Great Bear Lake in the Northwest Territories in 1930, and in the finding of a number of gold and base metal deposits in the northern areas of the provinces, the Northwest Territories and Yukon Territory in the 1930s. The Leduc oil discovery in Alberta in 1947 was the start of Canada's present-day oil industry, one of the most thriving sectors of the mineral economy. Since the immediate postwar period, mineral discoveries have been made in almost every region of Canada and the industry's rapid growth and increasing diversification have had a profound effect on the Canadian economy.

The dynamic role of the mineral industry is evident from the fact that in 1867 the value of mineral production was well under 1 p.c. of the gross national product whereas it now accounts for over 7 p.c. Since 1867, the value of mineral production on a per-capita basis has risen from an estimated \$1 to almost \$200; this increase resulted from a growth of mineral production value from about \$3,000,000 to nearly \$4,000,000,000, an increase that greatly outpaced the country's population growth and industrial production as a whole. Mineral exports have increased in proportion to production and now account for almost one third of all of Canada's merchandise exports. The mineral industry's record of the past hundred years is indeed one of greatly increasing importance and Canada now ranks as the world's third largest diversified mineral producer following the United States and the Soviet Union.

The historical trend of the value of mineral production is shown in Table 1. Statistics are available from 1886 and are given for five-year intervals from that date to 1950 and annually for subsequent years. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but serve as a measure of the tremendous growth of this major industry.

1.—Value of Mineral Production, 1886-1965

Year	Total Value	Value per Capita	Year	Total Value	Value per Capita	Year	Total Value	Value per Capita
	\$	\$		\$	\$		\$	\$

<sup>a</sup>Value of Newfoundland production included from 1949.

### The Mineral Industry in 1965

The Canadian mineral industry in 1965 continued the strong advances in each of its three sectors—metallic minerals, industrial minerals and mineral fuels—that have been experienced since the slight decline in 1958. It was a good year that was characterized by growth of output both regionally and by commodity. Preparation for production was under way at several large mineral projects, commercial production commenced at some large projects and others were expanded, and a continuing high rate of success in the discovery of mineral deposits of economic importance was maintained.

Canada's mineral production had a value of \$3,744,000,000 in 1965, almost double the 1956 value of \$2,085,000,000. The increase over 1964 of 10.5 p.c. was one of the largest percentage increases in recent years and the total value gain of \$356,000,000 was the third largest annual advance ever recorded. The metallics sector accounted for \$229,000,000 of this increase, the non-metallics, including structural materials, accounted for \$46,000,000 and the mineral fuels for \$81,000,000. The percentage contributions to total mineral output value of these three sectors were 51.5, 19.5 and 29.0, respectively.

### 2.—Value of Mineral Production, by Class, 1956-65

Year	Metallics	Non-metallics	Fuels	Structural Materials	Total
	\$	\$	\$	\$	\$
1956.....	1,146,349,595	160,341,599	518,761,191	259,453,169	2,084,905,554
1957.....	1,159,579,226	169,061,110	564,776,791	296,905,265	2,190,322,392
1958.....	1,130,160,395	150,354,802	510,768,681	309,455,160	2,100,739,038
1959.....	1,370,648,535	178,216,641	535,577,823	324,577,512	2,409,020,511
1960.....	1,406,558,061	197,505,783	565,851,829	322,594,308	2,492,509,981
1961.....	1,387,159,036	210,467,786	653,327,802	331,345,763	2,582,300,387
1962.....	1,496,433,950	217,453,009	780,932,387	356,166,833	2,850,986,179
1963.....	1,509,536,931	253,452,413	908,428,087	379,011,116	3,050,428,547
1964.....	1,701,648,538	284,497,000	998,767,672	403,058,324	3,387,971,534
1965 <sup>a</sup> .....	1,930,231,456	310,827,059	1,079,737,606	423,185,127	3,743,981,248

The index of the volume of mineral production provides a means of measuring the mining industry's absolute growth and its comparative growth in the economy;\* in 1965 it was 365.6 (1949=100) compared with 211.3 for industrial production of the economy as a whole. The extent of the industry's growth is also evident from per capita comparisons (see Table 1); the per capita value of mineral output in 1965 was \$191, which was 2.9 times greater than the 1949 per capita, whereas the increase in the per capita value of the gross national product was 2.1 times in the same period. Net value criteria, which measure value added in the production process, also point to the dynamic role of mining in the Canadian economy; mining net value increase has been about double that of the economy as a whole since 1949 and, as a percentage of total primary industry net value, mining has risen from 20 p.c. to over 30 p.c. since 1949 whereas agriculture has declined from 60 p.c. to a little more than 40 p.c.

\* For a description of this index, as well as one for manufacturing and electric power and gas utilities, see DBS Reference Paper *Revised Index of Industrial Production, 1935-1967 (1949=100)* (Catalogue No. 61-502). To update these series and others in the Index of Industrial Production, see DBS monthly report *Index of Industrial Production (1949=100)* (Catalogue No. 61-005).

## 3.—Quantity Indexes of Production of the Principal Mining Industries, 1956-65

(1949=100)

NOTE.—Revised since publication in the 1966 Year Book.

<sup>1</sup> Includes minor items not specified.

Mineral production was recorded for 63 mineral commodities in 1965, the leaders being crude oil, nickel, iron ore, copper, zinc, natural gas, cement, asbestos, gold and sand and gravel. These 10 commodities accounted for 79 p.c. of the industry's output. Notwithstanding this, there were important gains for several other minerals—notably natural gas by-products, molybdenum, potash and elemental sulphur—indicative of growing mineral diversification. There is also increasing regional diversification caused by greater mineral industry activity throughout the country, resulting in particularly marked gains in British Columbia, New Brunswick and Newfoundland, and in appreciable increases in all other provinces except Nova Scotia where the decline of the coal industry is having an adverse effect. Canada's land area of 3,600,000 sq. miles and extensive offshore areas provide great scope for continuing discovery and expansion. This trend to diversification is also evident from the output increases for most of the minerals produced and from the fact that Central Canada—Ontario and Quebec—now accounts for 45 p.c. of the country's output compared with close to 62 p.c. at the end of World War II.

The Canadian mineral industry is strongly export-oriented and, consequently, production increases are determined in considerable part by progress in export markets. The metallic mineral sector, in general, is an export industry, close to four fifths of its output being exported. Exports of all mineral materials in crude and fabricated forms in 1965 totalled \$2,782,000,000. The mineral industry is the country's leading export industry and for several years has been accounting for close to one third of the value of all merchandise exports. In 1965, the United States took 59 p.c. of Canada's mineral exports, Britain took 19 p.c., the European Common Market 8 p.c. and Japan 4 p.c.; the remaining 10 p.c. had a world-wide distribution.

Mineral industry growth is greatly dependent on continuing large-scale investment for resource development and plant expansion. Capital and repair expenditures in mining, quarrying and oil wells in 1965 amounted to \$881,000,000, 9 p.c. greater than in 1964. The forecast for 1966 is \$1,132,000,000, an increase of 28 p.c. over 1965 and a dramatic indication of the scale of expansion now under way in the industry.

Associated with mineral production growth and capital investment, there has been continuing progress in mining technology. Highly competitive world markets, rising labour and material costs, shortages of workers, and the opening up of more remote mineral properties have all contributed to the drive toward lower costs and greater efficiency in mining operations. In striving to be more competitive, the Canadian mineral industry has begun to increase its investment in research and to turn its attention to the problem of the shortage of engineers and scientists in the industry. As a result, research establishments are being enlarged and an active campaign is under way to encourage more young people to take university or technical school training in preparation for scientific, engineering and technical work in the Canadian mineral industry. Many companies have reported recent advances in mining procedures in Canadian mines that are resulting in greater efficiency.

The relatively high increase in value of metallics output in 1965 was the result of both price and quantity factors. Prices for the major base metals were firm and in some cases higher. Output of iron ore and base metals was high as new facilities commenced production and some existing facilities were expanded. Marked advances were made in lead with a gain in output value of about 62 p.c., in zinc of nearly 30 p.c., nickel 15 p.c. and copper of nearly 20 p.c. Nickel regained first place from iron ore as Canada's leading metallic mineral. Several copper, copper-zinc and copper-nickel mines commenced production in 1965 and others were being developed or planned for production in the next few years. The year heralded Canada's emergence as a major molybdenum-producing country, surpassed only by the United States and probably the Soviet Union. There was

higher output of a number of other metals that are recovered mainly as by-products of base metal operations. Output of gold and uranium declined from 1964, a trend that has been in evidence for several years.

The outstanding development in the industrial mineral sector of the industry again was related to production gains and announced mine development plans for potash production in Saskatchewan. Three companies contributed to 1965 output and development programs were under way that will add six new producers by 1968. It is widely acknowledged that potash reserves in Western Canada are the largest and of the highest grade in the world and by far the most economically attractive of any known deposits. Asbestos output, following five successive years of production records, declined slightly from 1964 but the value of shipments of elemental sulphur recovered from the processing of natural gas set a new record. The continuing high production of structural materials, which with non-metals comprise the industrial minerals sector, kept pace with the high rate of all types of construction. Production of mineral fuels, embracing crude petroleum, natural gas, natural gas liquids and coal, reached its highest point in 1965, all items except coal setting new records.

### Provincial and Territorial Mineral Production in 1965

Ontario is Canada's leading mineral-producing province, its 1965 output, valued at \$986,000,000, being 26.3 p.c. of the total for the country. Following in order were Alberta with 21.4 p.c., Quebec with 18.8 p.c., Saskatchewan with 8.7 p.c., British Columbia with 7.6 p.c., Newfoundland (incl. Labrador) with 5.9 p.c., and Manitoba with 4.9 p.c. It should be noted, however, that Ontario's percentage position of mineral output to total output continued to decline although it still maintained a substantial lead over that of Alberta, which in 1961 had displaced Quebec in second position. All provinces increased their mineral output value in 1965, Ontario, Alberta and Newfoundland showing the largest absolute gains.

### 6.—Value of Mineral Production, by Province, 1956-65

NOTE.—Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

**Newfoundland (incl. Labrador).**—The mineral output of the Province of Newfoundland (incl. Labrador) has grown rapidly in the past few years, iron ore production from Labrador being by far the main contributor. All metallics produced in the province in 1965 had a value of \$203,100,000, of which iron ore production of 14,600,000 tons accounted for \$168,500,000. Outputs of copper, zinc and lead, mainly from the Buchans Mine near St. John's, were valued at \$13,000,000, \$11,200,000 and \$7,200,000, respectively. One new copper mine commenced production during the year and another was under development for production in 1966. Wabush Mines started shipments of concentrates from its 5,300,000-ton-a-year facility at Wabush in Labrador, of which 4,900,000 tons a year is pelletized at the plant of Arnaud Pellets, an associated company, at Pointe Noire, Que. Iron Ore Company of Canada, Limited, produces about 6,000,000 tons of concentrate a year at its Carol operations near

Labrador City and pelletizes about 5,000,000 tons a year at the nearby plant of Carol Pellet Company, an associated company; the remainder is shipped as concentrates. Capacity of the pellet plant will be increased to 10,000,000 tons a year in 1966. It seems almost certain that growth in the value of mineral output in the province will depend almost entirely on iron-ore-industry growth. However, the potential of the Island for discovery and development of base metal properties is high, even though present operators are mining long-known deposits.

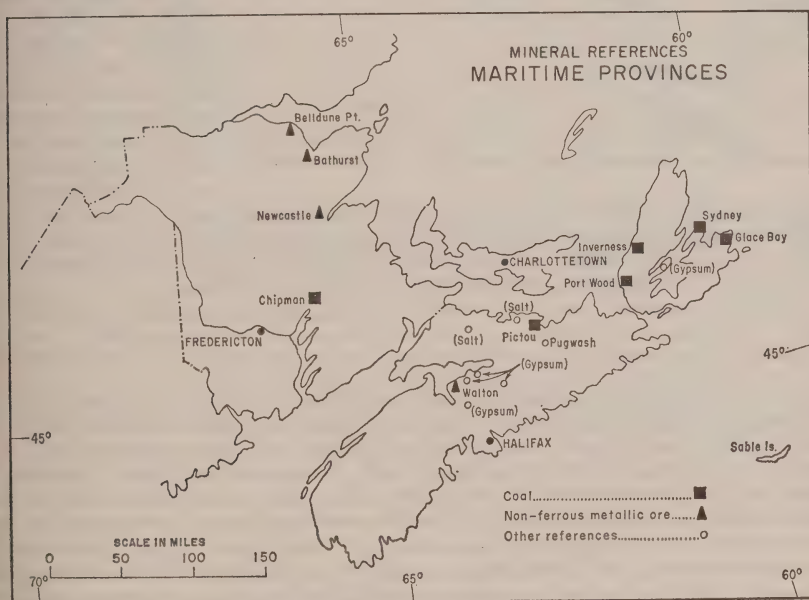

The value of industrial minerals produced in 1965 was \$17,300,000 compared with \$16,000,000 in 1964, asbestos contributing nearly \$7,000,000 and structural materials \$6,200,000.

**Prince Edward Island and Nova Scotia.**—Prince Edward Island's mineral industry is confined to the production of structural materials, which in 1965 were valued at nearly \$1,000,000.

Nova Scotia has shown the least change in total value of mineral output of all provinces over the past 15 years. Its main contribution to the Canadian mineral industry is in the output of coal, which in 1965 amounted to 4,100,000 tons worth \$42,000,000, and in the output of non-metallics which were valued at \$14,700,000, with gypsum, salt and barite being the main contributors. The coal industry continues to operate only with difficulty,

despite the rising financial assistance under the long-standing federal coal subvention policy. Some encouragement has been recently obtained in the search for base metal deposits and a study has been undertaken to evaluate the possibility of finding potash in commercial quantities.

**New Brunswick.**—Only in recent years has mineral production in New Brunswick begun to grow and to become of significance in the province's economic picture. The discovery of large zinc-lead-copper-silver deposits near Bathurst and the beginning of production from them in 1963 has raised New Brunswick's base metal output to \$65,000,000 in 1965. Brunswick Mining and Smelting Company Limited is enlarging its base metal operations to the west of Bathurst, raising mill capacity to 6,000 tons a day from 4,500 tons a day, and is developing its No. 6 mine for production in 1966; an associated company is building a zinc-lead blast furnace at Belledune Point, about 25 miles north of Bathurst. Heath Steele Mines Limited and Cominco Limited produce base metal concentrates. Several companies are exploring and developing base metal properties and studying production plans. Zinc production was valued at \$39,000,000 in 1965 compared with \$15,400,000 the previous year and lead, copper and silver outputs were valued at \$14,400,000, \$7,300,000 and \$4,100,000, respectively. The \$125,000,000 base metal-chemical-steel-fertilizer facilities being developed by Brunswick Mining and Smelting will provide a strong base for further industrial development that will contribute greatly to the province's economic growth.

**Quebec.**—The Province of Quebec is second to Ontario in value of metallic output, which totalled \$432,300,000 in 1965 compared with \$407,200,000 in 1964. Quebec led all provinces in iron ore production at 14,800,000 tons but was second to Newfoundland in value of iron ore output at \$141,600,000. Copper production at 352,000,000 lb. worth \$132,000,000 was higher than in 1964 as was zinc output at 552,000,000 lb. valued at

\$83,300,000. There was considerable activity in base metal exploration and development in the province during 1965, particularly in the northwest and Gaspé areas. Mineral development and plant construction programs under way indicate that production of copper and zinc should increase appreciably in the next few years; one copper mine commenced production in 1965 in the Eastern Townships and a second, north of Amos, started production and mill tune-up late in the year. The Pyre Lake iron orebody, about 60 miles north of Lac Jeannine, will be developed to supplement production of the 9,000,000 tons of concentrate a year from the Lac Jeannine facility.

Quebec leads all provinces in the production of non-metallics, which in 1965 were valued at \$151,900,000, asbestos

contributing \$119,000,000 of the total. After five successive annual production records there was a decline in Quebec and Canadian asbestos production. Plans were announced in 1965 for the development of the Asbestos Hill deposit in far northern Ungava at an estimated cost of \$90,000,000, with production scheduled for 1968.

Output of titanium dioxide slag was valued at \$20,000,000 compared with \$21,300,000 in 1964. It, along with remelt iron, which was valued at \$16,600,000 in 1965, is produced by the electric smelting of ilmenite at Sorel, the largest facility of its kind in the world.

**Ontario.**—Ontario's mineral production in 1965 at \$986,200,000 led all provinces. Metallics, at \$780,700,000, accounted for 79 p.c. of the total and nickel's contribution of \$319,800,000 accounted for 41 p.c. of the metallics' value. In an account of progress of the mineral industry, particularly for Ontario, that of nickel is outstanding. International Nickel and Falconbridge Nickel Mines Limited, first and second among world producers have expansion programs under way that will maintain and probably improve their positions as world leaders. World nickel consumption in 1965 was higher than the 640,000,000 lb. consumed in 1964; the United States, consumer of about one half of the nickel used in the western world, reported that consumption in the first half of the year was 27 p.c. higher than in the same period of 1964. The increase in nickel production in the Sudbury area was accompanied by an increase in copper production, which for the province totalled 438,000,000 lb. compared with 396,000,000 lb. in 1964. Probably the major development in the province outside the Sudbury area was the preparation for production in late 1966 of the copper-zinc-silver orebody, near Timmins, of the Texas Gulf Sulphur Company, at an initial daily rate of 6,000 tons of ore.

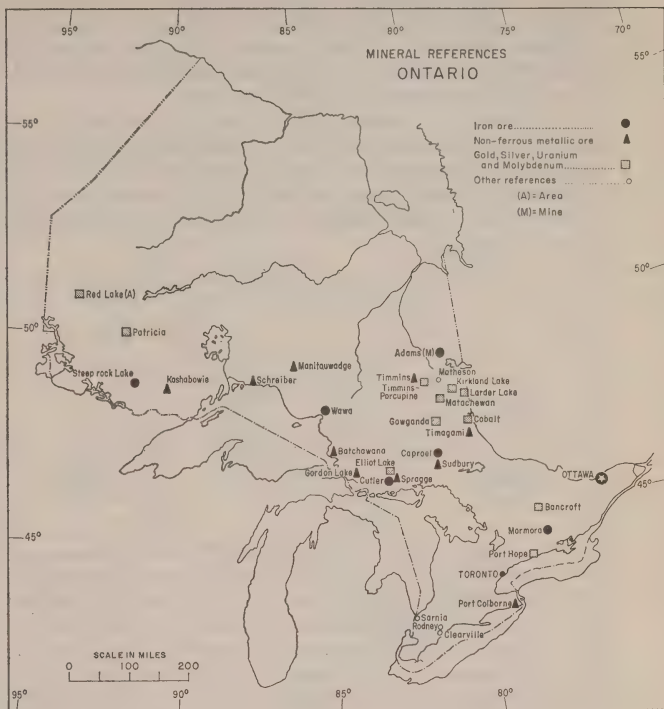

Production of iron ore at 8,300,000 tons valued at \$90,600,000 was slightly higher in quantity and value than in 1964. A new iron ore pellet plant near Kirkland Lake started regular shipments early in the year from its 1,250,000-ton-a-year facility and a new pellet plant in the Atikokan area started shipments about mid-year. Another company was constructing facilities in the Timagami area that will have a pellet capacity of 1,500,000 tons a year and two other companies were considering production of pellets from properties in north-western Ontario.

Structural materials output in 1965 valued at \$175,000,000 compared favourably with \$169,000,000 in 1964 and gives every indication of a continuing high rate to meet requirements of all types of construction.

Notwithstanding reduced output of uranium and gold, Ontario's mineral production is expected to grow at an accelerated rate in the years ahead, with considerably higher output of nickel, copper and iron ore. Many by-product metals are recovered from the processing of nickel-copper and copper-zinc production, the most common being platinum-group metals, gold, silver and cobalt.

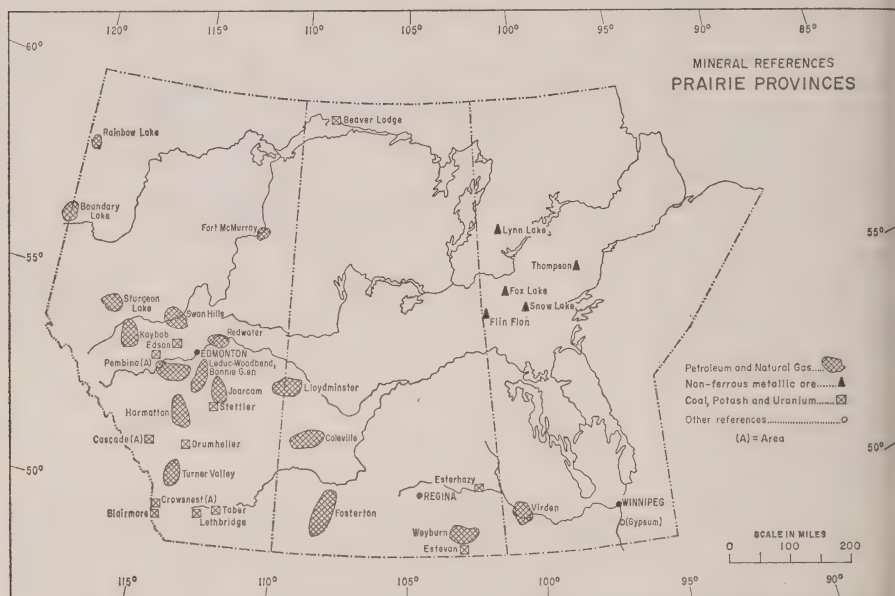

**Manitoba.**—Nickel, copper and zinc accounted for about 78 p.c. of Manitoba's value of mineral output in 1965, nickel accounting for \$106,800,000 of the \$182,000,000 total. International Nickel operates the world's only integrated nickel-production facility at Thompson—mine, concentrator, smelter and refinery—and is developing the Birchtree and Soab mines for production in 1968. Sherritt Gordon operates a nickel-copper mine at Lynn Lake and ships concentrates to its chemical refinery at Fort Saskatchewan in Alberta for recovery of nickel, copper and cobalt. The company started sinking a five-compartment shaft at a copper-zinc deposit south of Lynn Lake for an underground exploration and development program. Hudson Bay Mining and Smelting continued development of its Osborne and Anderson Lake copper-zinc mines near Snow Lake; it operates four mines in Manitoba and the Flin Flon mine that straddles the Saskatchewan border, all concentrates from which are smelted at Flin Flon. Production of structural materials at \$18,300,000, mineral fuels at \$11,700,000 and non-metallics at \$2,800,000 together constituted 18 p.c. of the province's mineral output in 1965.

**Saskatchewan.**—Attention in Saskatchewan in 1965 was again focused on the increased production of the potash development programs. Three companies produced 1,430,000 tons of potash worth \$54,400,000 compared with 858,351 tons worth \$31,200,000

in 1964. Mine development programs under way or announced will add six new producers by 1968 and will place Canada in first position among world producers of this necessary fertilizer ingredient. World potash production capacity in 1965 was an estimated 12,400,000 tons of  $K_2O$ ; it is expected that Canadian productive capacity in 1968 will be between 6,000,000 and 7,000,000 tons a year.

Total value of mineral output was \$327,300,000 to which mineral fuels contributed \$210,700,000, non-metallics \$62,400,000 and metallics \$41,600,000. Uranium ( $U_3O_8$ ), copper and zinc were the leading metallic minerals. Crude petroleum production at 87,600,000 bbl. was valued at \$200,400,000, a new record. There is every indication that crude oil and potash together will produce an increasing percentage of the province's mineral output.

**Alberta.**—Crude oil, natural gas and natural gas by-products are by far the major components of Alberta's mineral industry, which recorded a total output value of \$799,300,000 in 1965 compared with \$735,900,000 in the previous year. The three commodities contributed 91 p.c. of the total, crude oil accounting for \$474,000,000, natural gas for \$169,400,000 and natural gas by-products for \$86,900,000. The development of Alberta's oil and gas resources and markets continued to meet with success. A major oil resource was being opened up in the Rainbow Lake area in the northwestern part of the province. Exploration and development drilling reached an all-time high of 10,200,000 feet compared with the record of 10,334,000 feet set in 1964. Recovery of elemental sulphur from the processing of natural gas was worth \$20,700,000 compared with \$16,800,000 the previous year and production accounted for an estimated 1,650,000 tons of Canada's 1,908,000 tons. Canada is second only to the United States as a world producer of elemental sulphur as a result of the large-scale development of natural gas resources.

**British Columbia.**—Mineral production in British Columbia reached \$286,200,000 in 1965, 6.5 p.c. above the previous year's total. Metallics output was valued at \$171,400,000, mineral fuels at \$54,600,000 and structural materials at \$37,400,000. The year was highlighted by developments in the non-ferrous sector. Plans for development

of large-tonnage copper operations were announced and the molybdenum industry showed strong advances. Copper production was down to 88,000,000 lb. from 115,000,000 lb. in 1964 but this situation will reverse itself when new mines reach production. The province was heralded as a major molybdenum producer with three mines in operation and another being developed for production in 1966. With an output of 321,000,000 lb. of zinc and 242,000,000 lb. of lead, the province remains far in front of all the provinces in these important export commodities. Five iron ore producers shipped a record 2,100,000 tons of iron ore valued at \$18,800,000, nearly all of which

was exported to Japan; another producer starting operations in 1966 will have an annual iron ore production capacity of over 900,000 tons and will recover copper as a by-product. Exploration for base metal properties was widespread throughout the province and encouraging results were obtained by diamond drill exploration of large-tonnage, low-grade copper deposits east of the Alaskan Panhandle and north of Stewart, in north-central British Columbia and in the Highland Valley area.

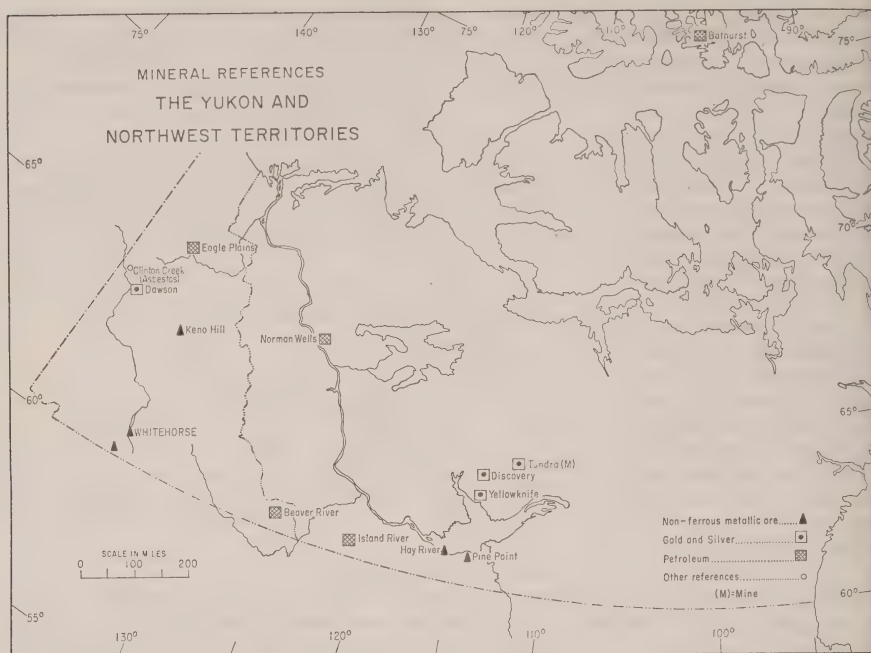

Asbestos production valued at \$13,700,000 accounted for about 10 p.c. of Canada's total and for about 60 p.c. of the province's output of non-metallies. Outputs of crude petroleum, natural gas and natural gas by-products were at all-time highs with values of \$27,200,000, \$17,900,000 and \$3,400,000, respectively.

**Yukon Territory and Northwest Territories.**—In the Yukon Territory, mineral output was valued at \$13,300,000, of which \$13,200,000 was metallic production; silver, lead, zinc and gold, in that order, accounted for nearly all of it. Of significance to future mineral output in the Yukon were the announcements that the Clinton Creek asbestos deposit, about 40 miles north and west of Dawson, would be developed for production; that New Imperial Mines Limited may begin production of copper from its property southwest of Whitehorse; and that substantial lead-zinc resources had been encountered in exploration of the Vangorda area near the British Columbia border.

Metallic mineral output of the Northwest Territories was valued at \$72,400,000 with zinc, lead and gold contributing \$28,300,000, \$24,300,000 and \$17,000,000, respectively. Regular shipments of lead-zinc ore were begun by Pine Point Mines Limited from high-grade deposits on the south shore of Great Slave Lake; trial shipments had been made late in 1964. Production of lead and zinc will increase substantially in 1966 with shipments of high-grade ore continuing and regular shipments of concentrate beginning from the 6,000-ton-a-day concentrator that started up late in 1965. Several other companies with property in the immediate Pine Point area received substantial encouragement in diamond drilling for lead-zinc deposits.

### Mineral Industry Outlook

Canada is the world's leading producer of nickel, zinc and asbestos; the second largest producer of gold, uranium, molybdenum, gypsum, selenium, sulphur and titanium; the third largest producer of iron ore, aluminum metal, cobalt, platinum metals and tellurium; fourth largest of lead, silver and magnesium; fifth largest of copper and barite; and in the over-all record ranks high for a number of other mineral commodities. The industry's output value has increased at an average annual rate of 7.6 p.c. during the past ten years and the outlook is for a continuing advance at least at this rate. Fortunately, the industry has only a few mineral commodity problems: a declining gold industry due to a cost-price squeeze, an ailing coal industry due to loss of markets and some high-cost mines, and a temporarily stagnant uranium industry awaiting new market growth. There is also a labour shortage problem which will be receiving attention in the administration of the Federal Government's new manpower policy. Possibly the most favourable current development is the intensity of mineral exploration throughout the country.

Canada has many competitors in the field of international mineral trade particularly in iron ore, copper, zinc, lead and crude petroleum (see pp. 594-596). There is no world scarcity of mineral raw materials and developments throughout the world in the past few years indicate that competition for mineral and metal markets will become even more severe. Although Canada is faced with increasing competition, it is very encouraging to note that major mineral discoveries are being made in this country each year in both long-established mining areas and in more remote locations. In addition, many smaller but still very important operations are being brought into production and others are being expanded. Thus, the value of Canada's mineral production will almost certainly exceed \$4,000,000,000 in 1967.

**28.—Detailed Mineral Production, by Province, 1964 with Preliminary Totals for 1965**

## Subsection 1.—Metals

The metallic minerals of greatest dollar value to Canada during 1965 were, in order: nickel, iron ore, copper, zinc, gold, lead, uranium and silver. These eight metals, which accounted for almost 95 p.c. of the total value of metal production in 1965, and several other items of importance are dealt with separately below.

**Nickel.**—Canadian nickel production in 1965 was 261,155 tons valued at \$435,332,054, a production increase of 14 p.c. over 1964. Canada maintained its position as the world's leading nickel producer but higher production in the Soviet Union, New Caledonia and Cuba reduced Canada's portion to about 50 p.c. Its leading producers—The International Nickel Company of Canada, Limited, Falconbridge Nickel Mines Limited, and Sherritt Gordon Mines Limited—are among the world's largest.

Near Sudbury in Ontario, International Nickel operated eight mines—the Creighton, Frood-Stobie, Garson, Levack, Murray, Crean Hill and Macleannan underground mines and the Clarabelle open pit—and had five under development. Also near Sudbury, Falconbridge operated six mines—Falconbridge, East, Onaping, Hardy, Fecunis and North—and had one under development. (See also p. 546.) In Manitoba, Sherritt Gordon's Lynn Lake mine operated at 3,800 tons daily. Nickel matte was imported to supplement the concentrates delivered from Lynn Lake to the Fort Saskatchewan, Alta., refinery. International Nickel was developing the Birchtree and Soab mines for production in the Thompson district to supplement production from its mine at Thompson where the company operates the world's only integrated nickel mining-concentrating-smelting-refining facility.

Smaller nickel-mining operations were carried out in Quebec, Ontario and British Columbia. In Quebec, Marbridge Mines Limited, in LaMotte Township, produced a bulk nickel-copper concentrate for treatment at Falconbridge's smelter, and Lorraine Mining Company Limited, which started production in March at its nickel-copper mine near Belleterre, shipped about 34,000 tons of concentrate to International Nickel for smelting. In northwestern Ontario, the Werner Lake mine of Metal Mines Limited produced 19,094 tons of bulk nickel-copper concentrate which was shipped to International Nickel for smelting. Giant Mascot Mines, Limited, near Hope, B.C., produced 18,000 tons of nickel-copper concentrate for export to Japan.

Nickel prices remained stable during the year. The duty of  $1\frac{1}{4}$  cents a pound on nickel entering the United States was suspended and the price to United States customers was reduced from 79 to  $77\frac{3}{4}$  cents a pound. The price to Canadian consumers remained at 84 cents a pound. Both prices were f.o.b. Port Colborne, Ont.

## 9.—Producers' Shipments of Nickel, by Province, and Total Value 1956-65

Year	Quebec	Ontario	Manitoba	British Columbia	Northwest Territories	Canada	
						Quantity	Value
	tons	tons	tons	tons	tons	tons	\$
1956.....	—	167,576	10,939	—	—	178,515	222,204,860

1965 <sup>p</sup> .....	3,305	192,655	63,284	1,911	—	261,155	435,332,054

**Iron Ore.**—Iron ore shipments in 1965 increased for the fourth consecutive year and amounted to 39,790,103 tons valued at \$419,393,058, an increase of 4 p.c. over the previous year. Quebec was the largest producing province, accounting for 14,781,630 tons, followed by Newfoundland-Labrador with 14,606,915, Ontario with 8,295,969, and British Columbia with 2,105,589 tons. In 1965, 16 companies were directly engaged in iron ore mining—one on the Island of Newfoundland, one in Labrador, one with mines in both Labrador and Quebec, two in Quebec, six in Ontario and five in British Columbia. In addition, four companies shipped iron ore as a by-product of base metal operations.

In Newfoundland, Dosco Industries Limited continued research on ore from its Wabana mine to find economic methods for up-grading the mines. The company continued to experience difficulty in marketing its ore because of its relatively low iron and high phosphorus and silica contents. Iron Ore Company of Canada, with direct-shipping ore from deposits on both sides of the Labrador-Quebec border at Schefferville and a concentrating-grade deposit near Labrador City, is the largest shipper, accounting for 24 p.c. of the 1965 shipments. Quebec Cartier Mining Company, the second largest, accounted for 23 p.c. Other shippers were Wabush Mines in Labrador; Hilton Mines, Ltd., in Quebec; and Algoma Ore Properties Division of Algoma Steel Corporation, Steep Rock Iron Mines Ltd., Caland Ore Company Ltd., Lowphos Ore Ltd., Marmoraton Mining Company, and Jones & Laughlin Steel Corporation, in Ontario. Oglebay Norton Company in Ontario shipped small tonnages of ore from stockpile. In British Columbia five companies shipped iron ore—Zeballos Iron Mines Limited, Coast Copper Company Limited, Texada Mines Limited, Brynnor Mines Limited and Jedway Iron Ore Limited. By-product iron ore producers were the Consolidated Mining and Smelting Company of Canada Limited (Cominco Limited), International Nickel Limited, Falconbridge Nickel, and Quebec Iron and Titanium Corporation.

Pellet shipments in 1965 amounted to 9,953,000 tons, an increase of 42 p.c. over 1964. Shipments were made by Arnaud Pellets, Pointe Noire, Que.; Carol Pellet Company, Labrador City, Labrador; Hilton Mines, Shawville, Que.; Jones & Laughlin Steel (Adams Mine), near Kirkland Lake, Ont.; Lowphos Ore Ltd., Sudbury area, Ont.; Marmoraton Mining Co., Ltd., near Marmora, Ont.; and International Nickel, Copper Cliff, Ont.

Annual iron ore productive capacity in Canada at the end of 1965 was 45,400,000 tons, 16.7 p.c. higher than in 1964. This included 15,600,000 tons of pellets, 12,400,000 tons of high-grade concentrates in addition to that used to make pellets, and 17,400,000 tons of medium-grade ores and concentrates containing less than 58 p.c. natural iron. On completion of planned iron ore pellet plants, productive capacity will be 21,400,000 tons a year in 1967 and 24,100,000 tons a year in 1968.

Two small mines in British Columbia—Orecan Mines Limited and Empire Development Company Limited—neared production at the end of 1965 and construction continued at Wesfrob Mines Limited's Moresby Island property. In Ontario, development of Dominion Foundries and Steel Limited's \$40,000,000 Sherman Mine project at Timagami was begun, with completion scheduled for 1968; its capacity will be 1,200,000 tons of pellets a year. In addition, several large projects were being considered for early development.

Canadian iron ore is consumed by steel industries in five main market areas—Canada, the United States, Britain, Japan and Western Europe. Shipments to domestic steel plants, to Japan and to Western Europe were higher in 1965 than in the previous year but those to the United States and Britain were lower. The United States is the world's largest iron ore importer and is Canada's largest market, accounting for 67 p.c. of total Canadian shipments in 1965 even though the amount shipped to that country was a million tons lower than in 1964. The decline in shipments to Britain from 3,200,000 tons in 1964 to 2,900,000 tons in 1965 was mainly the result of intensive competition from West African ores. Western European imports from Canada increased approximately 1,500,000 tons to about 2,300,000 tons in the same comparison and reflected greater consumption of high-grade concentrates and pellets, mainly in West Germany, Italy, Belgium and Luxembourg. Total Canadian exports in 1965 were 30,800,000 tons compared with 30,500,000 tons in 1964.

Canadian consumption of iron ore in 1965, at 12,200,000 tons, was up about 5 p.c. from 1964 but imports, which amounted to 4,800,000 tons, were down 8 p.c. Most imported ore came from Michigan and Minnesota, although 259,225 tons came from Brazil.

**10.—Iron Ore Shipments and Production of Pig Iron and Steel Ingots and Castings, 1956-65**

Year	Iron Ore Shipments						Production of Pig Iron	Production of Steel Ingots and Castings
	Newfound- land (incl. Labrador)	Quebec	Ontario	British Columbia	Canada

1965 <sup>a</sup> .....	14,603,915	14,781,630	8,295,969	2,105,589	39,790,103	419,393,058	7,064,880	10,028,899

**Copper.**—Mine production of copper in 1965 was 517,247 tons valued at \$388,005,039, an increase of 30,347 tons and \$63,537,205 over 1964. There was a sharp increase in the production and consumption of refined copper but exports of copper in primary forms decreased. Mine production increased in all producing provinces except Saskatchewan and British Columbia. New mines were brought into production in Newfoundland, Quebec, Ontario and Saskatchewan and a number of mines were under development. Two mines were re-opened in British Columbia and one was closed by a strike.

Six smelters for the reduction of copper and nickel-copper ores and concentrates are operated in Canada. In the Sudbury district of Ontario, International Nickel operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel produces nickel-copper matte at its Falconbridge smelter. Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man., smelts concentrates from its mines in Manitoba and Saskatchewan and copper concentrates from the mine of Sherritt Gordon at Lynn Lake, Man. Ores and concentrates from most of the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines Limited and the Murdochville smelter of Gaspé Copper Mines Limited, both in Quebec. Electrolytic copper refineries are operated by International Nickel at Copper Cliff and by Canadian Copper Refiners Limited, a subsidiary of Noranda Mines, at Montreal East, Que. Production of refined copper in 1965 was 434,133 tons, 6 p.c. more than in 1964.

In Newfoundland, British Newfoundland Exploration Limited started production in July from its Whalesback Pond mine; there were five producing mines and one mine under development in that province in 1965. Production totalled 17,348 tons valued at \$13,045,795, an increase of 3,733 tons and \$3,950,782 over 1964. First Maritime Mining Corporation Limited was developing the Gull Pond property for production in 1966. Output from New Brunswick's three copper producers totalled 9,696 tons valued at \$7,291,392, only slightly higher than in 1964; two mines were being developed in the Bathurst area for production in 1966.

Quebec copper mines produced a record 176,074 tons of copper valued at \$132,407,661, being 17,986 tons and \$26,804,817 more than in 1964. A major expansion program was started at the Murdochville mine and mill of Gaspé Copper Mines; when completed in 1967, capacity of the mill will be 11,000 tons of ore a day and the Copper Mountain mine will be producing about 4,000 tons of ore a day. Rio Algom Mines Limited started mill tune-up at its Mines de Poirier mine north of Amos.

Ontario's copper production also continued to increase and reached 219,183 tons valued at \$163,860,900 in 1965, 21,266 tons and \$32,402,105 more than in 1964. International Nickel produced nickel-copper ore from eight mines in the Sudbury district and was developing five mines in this area. Falconbridge operated six mines in the Sudbury area and was developing the Strathcona mine on the north rim of the basin. Texas Gulf Sulphur Company continued development of its mine near Timmins and was building a 9,000-ton-a-day concentrator for production in late 1966. Willroy Mines Limited and Lun-Echo Gold Mines Limited brought the Willecho mine near Manitouwadge into production in March and Sheridan Geophysics Limited started production in October at 500 tons of ore a day from its Coppercorp mine near Batchawana. Other copper-producing mines in Ontario include: Kam-Kotia Porcupine and McIntyre-Porcupine at Timmins; Copperfield's Temagami mine at Timagami; Noranda's Geco mine at Manitouwadge; Rio Algom's Pater mine at Spragge and North Coldstream's mine at Kashabowie.

Manitoba-Saskatchewan's two major producers, Hudson Bay Mining and Smelting and Sherritt Gordon, had a combined output of 50,247 tons valued at \$37,785,891, a very slight increase over 1964. Hudson Bay operated a central mill and smelter at Flin Flon, treating ores from the Schist Lake, Chisel Lake and Stall Lake mines in Manitoba, the Coronation mine (closed in August) in Saskatchewan and the Flin Flon mine that straddles the Manitoba-Saskatchewan boundary. The company continued exploration and development at its Osborne Lake and Anderson Lake mines near Snow Lake, Man. Sherritt Gordon produced copper concentrates at its Lynn Lake, Man., mine for shipment to Hudson Bay's smelter, and nickel-copper concentrates for shipment to its own smelter at Fort Saskatchewan, Alta. The company was preparing for underground exploration on its copper-zinc deposit at Fox Lake, some 34 miles southwest of Lynn Lake.

Production in British Columbia decreased for the second consecutive year; at 44,069 tons, production was 23 p.c. lower than in 1964 and its value, at \$33,139,640, was down 14 p.c. A prolonged strike at the Craigmont mine, a late start after the settlement of the Britannia strike in March and continued closure of the Sunro mine contributed to decreased production. The Sunro mine of Cowichan Copper Co., Ltd., on Vancouver Island, that was flooded in 1964 was rehabilitated and mill tune-up started in December 1965. The Anaconda Company (Canada) Limited rehabilitated the Britannia mine and was preparing to mine low-grade ore from the surface outcrop. Western Mines Limited was preparing its mine at the south end of Buttle Lake on Vancouver Island for production at 750 tons of ore a day in 1966. At Babine Lake, northeast of Smithers, The Granby Mining Company Limited was preparing the Granisle mine for production in late 1966. Production from the Unuk River property of Granduc Mines Limited, development of which was delayed by a disastrous avalanche, is now scheduled for late 1969. New Imperial Mines Limited near Whitehorse, Y.T., was preparing several orebodies for open-pit mining in 1966.

### 11.—Producers' Shipments of Copper, by Province, and Total Value 1956-65

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Year	Newfoundland	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba

**Lead and Zinc.**—Production of lead in 1965 totalled 286,811 tons, 41 p.c. more than in 1964. Refinery production at Trail, B.C., was 186,484 tons, 35,112 tons more than in 1964. Exports of lead in concentrates totalling 106,964 tons of contained lead compared with 80,357 tons in 1964, went mainly to the United States and Belgium with lesser amounts to Britain, Italy and West Germany. Exports of refined lead amounted to 129,065 tons, 33,198 tons more than in the previous year. Lead prices were steady throughout 1965 at 15.5 cents a pound.

Zinc production continued to rise in 1965, reaching a record 831,902 tons which was 147,389 tons more than in 1964. Refinery production at Trail, Flin Flon and Valleyfield was also higher, rising from 337,728 tons in 1964 to 358,779 tons in 1965. Exports of zinc in concentrates, totalling 487,445 tons, went mainly to the United States (231,597 tons), Belgium (156,725 tons), Poland (35,113 tons), and West Germany (22,034 tons). Refined exports amounted to 264,200 tons and went mainly to the United States and Britain. Zinc prices were steady throughout 1965 at 14.5 cents a pound. The United States Government late in 1965 ended its system of import quotas on lead and zinc ores, concentrates and unmanufactured metal that had been in effect since October 1958. The controls had limited imports from Canada to 80 p.c. of the 1953-57 average.

Production of lead and zinc in the Northwest Territories rose in 1965 to 78,362 tons and 93,562 tons, respectively, from minor amounts produced the previous year. The increase was due to the start of production at Pine Point on the south shore of Great Slave Lake where high-grade ore was shipped during the year and a 5,000-ton-a-day concentrator began mill tune-up in November 1965. Lead and zinc were produced in the Yukon Territory by United Keno Hill Mines Limited, which operates mines in the Mayo district, 285 miles north of Whitehorse.

British Columbia's production was mainly from the southeastern part of the province, most of it being accounted for by Cominco Limited, which operates the Sullivan mine at Kimberley, the H.B. mine at Salmo and the Bluebell mine at Riondel; daily lead-zinc ore production from the three mines was, respectively, 10,000, 1,200 and 700 tons. Other producers in this part of the province included Canadian Exploration Limited at Salmo, Reeves MacDonald Mines Limited at Remac, and Aetna Investment Corporation Limited at Toby Creek. British Columbia's only producer of copper-zinc ore was the Britannia mine of The Anaconda Company (Canada) Ltd. There are a number of smaller lead-zinc producers in British Columbia; Cominco Limited treats concentrates from most of these properties, some from the Yukon Territory and foreign concentrates at its Trail smelter.

Zinc and lead were recovered from copper-zinc-lead ores of the Flin Flon mine straddling the Saskatchewan-Manitoba border and operated by Hudson Bay Mining and

Smelting. This company also operates the Schist Lake mine near Flin Flon and the Chisel Lake and Stall Lake mines 90 miles east of Flin Flon. Ore from all company mines is milled at Flin Flon.

In Ontario, Noranda Mines Limited (Geco Division) and Willroy Mines Limited, both at Manitouwadge, produced zinc, lead and copper concentrates; Kam-Kotia Porcupine Mines Limited at Timmins produced copper concentrates and a small tonnage of zinc concentrates. Two new mines were opened—the Willecho at Manitouwadge early in 1965 and the Zenmac near Schreiber early in 1966. At Port Maitland on Lake Erie, zinc concentrates from Ontario and Quebec mines were roasted by Sherbrooke Metallurgical Company Limited and the resulting calcine was shipped to the United States for final treatment.

Quebec's lead production showed little change from 1964 to 1965 but its zinc output rose from 236,540 tons to 275,788 tons. Production of zinc from the new Matagami Lake camp totalled 194,600 tons and a new producer in the Noranda district, Lake Dufault Mines Limited, produced about 30,000 tons of contained zinc from copper-zinc ores. Other mines in Quebec were the Normetal (copper-zinc), Quemont (copper-zinc), Manitou-Barvue (copper-zinc-lead) and East Sullivan (copper-zinc), all in the Noranda-Val d'Or area; New Calumet (zinc-lead) at Calumet Island on the Ottawa River; Coniagas (zinc-lead-silver) at Bachelor Lake, and Solbec (copper-zinc-lead) in the Sherbrooke district. The Cupra mine, just south of the Solbec, was brought into production in September 1965.

New Brunswick's production of lead and zinc was up substantially from 1964. Brunswick Mining and Smelting Corporation Limited operated its No. 12 mine near Bathurst, completing the first full year of production. Construction of a zinc-lead blast furnace by the company continued at Belledune Point, 25 miles north of Bathurst where part of the Bathurst-district concentrates will be smelted. Heath Steele Mines Limited, near Newcastle, produced zinc, copper and lead concentrates. Nova Scotia's only lead-zinc producer was Magnet Cove Barium Corporation, at Walton. In Newfoundland, regular production of lead, zinc and copper concentrates continued at the Buchans mine of American Smelting and Refining Company. Zinc was recovered from copper ore by Consolidated Rambler Mines Limited near Baie Verte.

Exploration and development were carried out in many areas during 1965. New mines were under development at Timmins, Ont., in the Joutel-Poirier district 60 miles north of Amos, Que., near Bathurst, N.B., in northern Manitoba, in northern Saskatchewan, and on Vancouver Island. Exploration programs of particular interest were carried out in the Ross River district of central Yukon Territory and in the Pine Point district of the Northwest Territories, where substantial discoveries of zinc-lead ore were announced.

**Gold.**—Canadian gold production in the year 1965 totalled 3,608,348 oz.t. valued at \$136,142,969, down slightly from 1964. The average price for gold paid by the Royal Canadian Mint in 1965 was \$37.73 per oz.t. in Canadian funds, down from \$37.75 the year before. On May 2, 1962, the Canadian dollar was stabilized at 92.5 cents in terms of the United States dollar with a permissible fluctuation of 1 p.c. either way from the fixed value. The range in value for the Canadian dollar is thus set at \$0.916 to \$0.934 in relation to the U.S. dollar and the corresponding Royal Canadian Mint gold price between \$37.46 and \$38.22 per oz.t.

Most Canadian lode and placer gold mines receive cost assistance under the Emergency Gold Mining Assistance Act (see p. 585) but the gold mines continue to experience economic difficulties as costs of recovery maintain an upward trend. Eight lode gold mines closed in 1965 mainly due to the exhaustion of economic ore reserves. Four mines began

production and two small mines operated on an intermittent basis. In 1965, the proportion of gold derived from lode deposits declined to 81.2 p.c. from 82.2 in 1964. By-product gold from base metal ores rose to 17.6 p.c. from 16.3 p.c. and placer gold amounted to 1.2 p.c. of the total, down from 1.5 p.c. Ontario was the principal producing province in 1965, accounting for almost 54 p.c. of the total, and Quebec was second with over 25 p.c.; the Northwest Territories produced over 12 p.c. and British Columbia about 3.1 p.c.

In Ontario, production declined to 1,942,272 oz.t. from 2,155,370 oz.t. in 1964. Thirty-one lode gold mines operated in the province but two operations were small and intermittent. Four mines—Wright-Hargreaves Mines, Limited and Lake Shore Mines, Limited, both at Kirkland Lake, Broulan Reef Mines Limited and Hugh-Pam Porcupine Mines Limited, a combined operation near Timmins, and Leitch Gold Mines Limited near Beardmore—ceased operations. Lake Shore continued to operate its mill in a tailings reclamation program. Anco Mines Limited began ore shipments in 1965 from its Red Lake area mine. In the Matachewan district, Stairs Exploration and Mining Company began operations in mid-1965 with a small mill. An estimated 97,432 oz.t. of gold was recovered as a by-product from base metal ores in Ontario compared with 57,772 oz.t. in 1964. Quebec's output declined to 906,417 oz.t. in 1965 from 934,769 oz.t. in 1964. Fourteen lode gold mines operated in the province during the year. Camflo Mattagami Mines Limited near Malartic and Wasamac Mines Limited near Noranda were new producers and Bevecon Mines Limited near Val d'Or and Canadian Malartic Gold Mines Limited and Malartic Gold Fields Limited at Malartic ceased operations. Gold recovered as a by-product from base metal ores represented over 41 p.c. of the provincial total.

In the Northwest Territories, estimated production in 1965 was 452,000 oz.t., a substantial increase over the 412,879 oz.t. produced in 1964. Discovery Mines Limited, Tundra Gold Mines Limited and the Con and Ryeon mines of Cominco Limited all recorded higher lode gold production in 1965. Giant Yellowknife Mines Limited, Canada's largest lode gold mine, produced 255,024 oz.t., as compared with 266,752 oz.t. the year before. Production declined at both of British Columbia's lode gold mines—Bralorne Pioneer Mines Limited and The Cariboo Gold Quartz Mining Company Limited. The reduction at Bralorne Pioneer was mainly due to a planned decrease in the milling rate for about two months while shaft deepening was in progress. Total production from all sources in 1965 was 112,786 oz.t. compared with 139,959 oz.t. in 1964.

Manitoba and Saskatchewan combined accounted for 120,611 oz.t. in 1965, compared with 116,171 oz.t. in 1964. Production from San Antonio Gold Mines Limited, the only lode gold mine in the two provinces, declined to 24,969 oz.t. from 28,773 oz.t. in 1964. Most of the production is derived from base metal ores mined in the Flin Flon area. In the Yukon Territory, almost all of the 46,878 oz.t. produced in 1965 came from placer operations; output in 1964 was 57,844 oz.t. In Newfoundland and New Brunswick some gold was recovered as a by-product of base metal production.

**Uranium.**—The uranium industry suffered its sixth consecutive annual decline in output in 1965. Total shipments were 8,615,000 lb. of uranium oxide ( $U_3O_8$ ) compared with the peak production of 31,784,000 lb. in 1959 and value of shipments at \$64,300,000 was less than one fifth of the peak year's value. Four uranium mines operated in 1965 but one, Stanrock Uranium Mines Limited, is a small producer that treats only mine water for recovery of uranium. About 79 p.c. of 1965 shipments came from three mines in the Elliot Lake camp in Ontario—Stanrock Uranium Mines Limited, Denison Mines Limited, and Rio Algom Mines Limited's Nordic mine—and the remainder came from Eldorado Mining & Refining Limited's Beaverlodge mine in northern Saskatchewan.

The Canadian Government announced in June 1965 that it was prepared to purchase uranium from companies that had previously produced uranium. Purchases would be made up to maximum stipulated quantities for a period of five years from July 1, 1965, at a price of \$4.90 a pound of  $U_3O_8$ . The program would allow companies to maintain their mines and plants in a condition to meet the expected production challenge of the future and permit the industry to produce for the next five years at roughly 8,000,000 lb. a year.

Also, in June 1965 the Government announced that from then on it was prepared to grant export permits with respect to sales of uranium only if the uranium is to be used solely for peaceful purposes, except for material still to be shipped under existing contracts. Before such sales are authorized, Canada requires an agreement with the government of the importing country to ensure, with appropriate verification and control, that the uranium is to be used for peaceful purposes only. This policy allows Canadian producers to supply uranium for reactors that are already in operation, under construction, or firmly committed for construction in other countries for the anticipated life of each reactor. In addition, the Government is prepared to authorize the export, for periods of up to five years, of reasonable quantities of uranium for the accumulation of inventory in the importing country.

Sales of small quantities of uranium, up to a maximum of 2,500 lb. in total for a country, may be made to countries not holding agreements for the peaceful uses of atomic energy. All sales whether made by the Crown corporation, Eldorado Mining and Refining Limited, or by private producers are subject to control measures administered through the Atomic Energy Control Board.

Both Eldorado and Stanrock produced mainly to meet the contracts Canada holds with the United States Atomic Energy Commission and the United Kingdom Atomic Energy Authority. Denison completed its commitments with those agencies in June 1965 and then began deliveries under the new Canadian Government stockpile program. Rio Algom had organized its contract deliveries to enable it to produce for the agencies until October 1971 but the Government program permitted the company to deliver additional volumes of uranium to stockpile, which will increase its efficiency of operation.

In November 1965, Rio Algom acquired from Dow Chemical of Canada Limited the latter's 50-p.c. interest in the capital of Rio Tinto Dow Limited and then changed the name of the new wholly-owned subsidiary to Rio Tinto Nuclear Products, Limited with plans to construct a 150-ton-a-year uranium refinery at the Nordic mine site. Rio Algom visualizes savings in producing uranium fuel products, which are now produced in Canada only by Eldorado, since it will be possible to commence production of higher grade products from the uranium while it is still in solution in the mill circuit.

The uranium industry has been encouraged by the unparalleled increase in the number of commitments to build nuclear power plants in several countries. Canada's own nuclear power program was marked by the official opening of the Pickering, Ont., reactor site where the first two 500-MWe units of a contemplated eight-unit plant will be built for The Ontario Hydro Electric Power Commission. In May 1965 it was announced that consideration was being given by Hydro-Quebec to the construction of a 250-MWe nuclear power plant. Another highlight of 1965 was the completion of a research reactor (WR-1) in November at the new Whiteshell Nuclear Research Establishment, Pinawa, Man. Meanwhile, Canada's first nuclear power station, located at Rolphton, Ont., continued to operate successfully and the opening of the 200-MWe Douglas Point plant, which was scheduled for the autumn of 1965, was delayed until late 1966 or early 1967.

Canada has reserves of 210,000 tons of  $U_3O_8$  that can be recovered in a price range of \$5 to \$10 a pound of  $U_3O_8$ . These reserves constitute one third of the western world total.

<sup>1</sup> Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-65 are for uranium oxide ( $U_3O_8$ ).

**Silver.**—With recovery of silver commencing at two new base metal mines in 1965 and several other producers completing their first full year of operation, Canada's mine output at 32,964,299 oz.t. was more than 3,000,000 oz.t. greater than in 1964. Declines in production in Nova Scotia, Manitoba, British Columbia and Yukon Territory were more than offset by increases in the Northwest Territories and the other provinces. Output in the Northwest Territories reached an all-time high as a result of the substantially increased production by Echo Bay Mines Limited. Canadian production in 1965 was valued at \$46,117,054, or more than \$4,000,000 higher than the previous year. Base metal ores accounted for 80 p.c. of the total, almost 19 p.c. came from silver-cobalt ores mined in northern Ontario and the remainder from lode and placer gold ores. Reported consumption of silver in Canada reached a record 30,170,097 oz.t. in 1965, mainly because of a large increase in the amount used in coinage; the latter was almost double the amount so used in 1964.

Canada's two largest producers of refined silver were: Canadian Copper Refiners Limited at Montreal East, Que., which recovered 9,600,000 oz.t. from the treatment of anode and blister copper, and Cominco Limited at its refinery at Trail, B.C., which recovered 6,400,000 oz.t. in the processing of lead and zinc ores and concentrates. The remainder of the output of refined silver was produced by Cobalt Refinery Limited in the

processing of silver-cobalt ores and concentrates at its plant at Cobalt, Ont.; by International Nickel at Copper Cliff, Ont., in the treatment of nickel-copper concentrates; by Hollinger Consolidated Gold Mines, Limited at Timmins, Ont., from gold precipitates; and by the Royal Canadian Mint at Ottawa, from gold bullion.

The two largest sources of silver in Canada are the Hector-Calumet, Elsa, Keno and Silver King silver-lead-zinc mines in the Yukon Territory about 200 miles north of Whitehorse, operated by United Keno Hill Mines Limited, and the Sullivan lead-zinc-silver mine at Kimberley, B.C., operated by Cominco Limited. Other important producers of by-product silver included Echo Bay Mines Limited near Port Radium, N.W.T.; Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man.; Noranda Mines Limited (Geco Division) at Manitouwadge, Ont.; Lake Dufault Mines, Limited near Noranda, Que.; Brunswick Mining and Smelting Corporation Limited near Bathurst, N.B.; and American Smelting and Refining Company (Buchans Unit) in Newfoundland. Some 6,100,000 oz.t. of silver were derived from silver-cobalt ores mined in the Cobalt and Gowganda areas of Ontario, the largest producer being Silverfields Mining Corporation Limited with an output exceeding 1,000,000 oz.t.

#### 16.—Producers' Shipments of Silver, by Province, and Total Value, 1956-65

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Year	Average Price per oz.t. (Canadian funds)	Newfoundland	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba

<sup>1</sup> Includes relatively small quantities produced in Alberta.

**Platinum Metals.**—Canadian production of the platinum metals in 1965 amounted to 452,063 oz.t. valued at \$35,678,078, an increase of 75,825 oz.t. and \$10,273,961 over 1964. The increase resulted from higher nickel production. Platinum group metals—platinum, palladium, rhodium, ruthenium, iridium and osmium—occur in Canadian nickel ores to the extent of about 0.025 oz.t. per ton of ore. In the treatment of these ores for nickel, the platinum metals follow nickel and are eventually removed as sludges from the electrolytic tanks in which nickel cathodes have been formed. The sludge is purified and sent to precious metal refineries in Britain and the United States for recovery of the platinum metals.

World markets for platinum metals were very strong in 1965. Demand in the western world outpaced supply and the extra metal had to be purchased from the Soviet Union. Half of the world's output is produced in the Soviet Union and most of the remainder in the Republic of South Africa and Canada. An erratic pattern of sales to the western world by the Soviet Union caused a wide difference between the official platinum price of about \$100 an oz.t. and the free market price of up to \$160 an oz.t.

**Aluminum.**—As a producer of aluminum metal, Canada ranks second, after the United States, in the non-communist world. At the end of 1965 Canadian smelting capacity was 913,000 tons a year. Plants of the Aluminum Company of Canada, Limited (Alcan), located at Arvida, Alma, Shawinigan and Beauharnois in Quebec and at Kitimat in British Columbia, have a capacity of 808,000 tons; a further 24,000 tons of capacity will be completed at Kitimat in 1966. Alcan production was 728,400 tons in 1965. Canadian British Aluminium Company Limited operates a smelter at Baie Comeau, Que., having an estimated capacity of 105,000 tons a year; a plant addition and renovations will increase capacity to 175,000 tons by 1969-70. Canadian production of primary aluminum in 1965 was 840,348 tons, of which 707,512 tons were exported. Output in 1966 is expected to be about 910,000 tons. As all bauxite and alumina used by the aluminum smelters must be imported, mainly from the Caribbean area, metal production is classed in official statistical data with manufactures and not with smelter production of ores and metals of domestic origin. The export price of primary aluminum was 24.5 cents (U.S.) a pound throughout 1965 and to mid-1966. The Canadian price was 26.0 cents a pound.

**Cobalt.**—Cobalt production in 1965 was 3,798,740 lb. valued at \$8,205,278, considerably higher in both quantity and value than in the previous year. Cobalt is derived as a by-product of the smelting and refining of nickel-copper ores of Sudbury, Ont., and Lynn Lake, Man.; from nickel ores of Thompson, Man.; and from silver ores of Cobalt, Ont. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., Thompson, Man., and Clydach, Wales. Falconbridge Nickel produces electrolytic cobalt in the refining of nickel-copper matte exported to its refinery at Kristiansand, Norway. Sherritt Gordon recovers cobalt as a by-product at its nickel refinery at Fort Saskatchewan, Alta. Cobalt Refinery Limited at Cobalt, Ont., recovers black cobalt oxide and mixed cobalt and nickel oxide from silver concentrates.

**Columbium.**—In 1965, mine production of St. Lawrence Columbium and Metals Corporation, the only Canadian producer of columbium concentrates, amounted to 2,300,000 lb. of contained  $Cb_2O_5$  in pyrochlore concentrates valued at \$2,350,000. The mine is near the town of Oka, 20 miles west of Montreal. Quebec Columbium Limited and Columbium Mining Products Limited also own large pyrochlore deposits in the Oka area. Masterloy Products Limited, Ottawa, Ont., is the only Canadian manufacturer of ferrocolumbium, which is sold in Canada and the United States.

**Magnesium.**—At the end of 1965, Dominion Magnesium Limited, the sole producer of magnesium in Canada, had a production capacity of 11,500 tons a year. The smelter at Haley, Ont., contains the largest installation of vacuum equipment in the world. The recovery process involves calcining an exceptionally pure dolomite quarried near the smelter, mixing the calcine with ferrosilicon from Beauharnois, and reducing the mixture in special retorts under vacuum at high temperature. Production was 11,133 tons in 1965. Much of the output is exported to Britain and West Germany. Canadian consumption of primary magnesium, including 1,641 tons of imports, was 4,473 tons in 1965. Free World production in 1965 was estimated at 170,500 tons.

**Molybdenum.**—Molybdenum production in 1965 amounted to 9,691,220 lb. valued at \$16,759,950. Approximately 2,200,000 lb. of the molybdenum produced was converted, by roasting, to molybdc oxide ( $MoO_3$ ), some of which was converted to ferromolybdenum; the remainder of the production was exported in molybdenite ( $MoS_2$ ) concentrates.

Canadian production in 1965 came from four mines in Quebec and three in British Columbia. Quebec producers were the Lacorne mine of Molybdenite Corporation of Canada Limited near Val d'Or; the mines of Preissac Molybdenite Mines Limited and of Anglo-American Molybdenite Mining Corporation, both in the Lake Preissac area just north of Cadillac; and the Murdochville mine of Gaspé Copper Mines Limited. The first three mine molybdenite as a primary product and recover bismuth as a by-product; the Murdochville mine is a copper operation and molybdenite is recovered as a by-product. In British Columbia, Brynnor Mines Limited (Boss Mountain) and Endako Mines Limited are primary producers of molybdenite; Red Mountain Molybdenum Mines Ltd. (Torwest) and British Columbia Molybdenum Limited (Alice Arm), with mine development under way, will be primary producers; Bethlehem Copper Corporation Limited recovers molybdenite as a by-product from copper ores mined near Ashcroft in the Highland Valley.

Molybdenite Corporation, Preissac and Endako all operate roasting facilities to produce molybdic oxide at their mine sites; Masterloy Products Limited operates roasting facilities at Duparquet, Que. Masterloy and Preissac also produce ferromolybdenum, Preissac at its mine site and Masterloy at its plant near Ottawa.

**Selenium and Tellurium.**—Selenium production in 1965, totalling 504,109 lb. valued at \$2,435,704, was 8 p.c. higher than in 1964; tellurium output at 86,264 lb. valued at \$554,793 was 10 p.c. higher. These metals are recovered from the anode muds resulting from the electrolytic refining of copper at the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont.

**Titanium.**—Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec. The Allard Lake ore, mined by Quebec Iron and Titanium Corporation, is smelted by the company in electric furnaces at Sorel, Que., to produce high-titania slag and pig iron. The slag is sold to producers of titanium-based pigments in Canada, the United States, Britain, Japan and other countries. Ilmenite mined at St. Urbain by Continental Titanium Corporation is used as heavy aggregate in weighting oil and gas transmission pipelines and in shielding nuclear reactors. The value of titanium-bearing materials shipped in 1965 as ore, heavy aggregate and titanium-bearing slag was at an all-time high of \$22,425,094, compared with \$21,270,144 in 1964.

**Tungsten.**—Tungsten production in 1965 was approximately 3,000,000 lb., all from Canada Tungsten Mining Corporation Limited whose mine is just east of the Yukon-Northwest Territories boundary and 135 miles north of Watson Lake. This is one of the highest grade tungsten deposits in the world and its production moved Canada into third place, following the United States and South Korea, among the non-communist producers.

**Vanadium.**—Canadian Petrofina Limited recovers vanadium pentoxide ( $V_2O_5$ ) at its refinery at Pointe aux Trembles, Que. The capacity of this plant, which started operations in 1964 and is the only vanadium-recovery facility in Canada, will be increased in 1966 from 500 lb. of  $V_2O_5$  a day to 1,000 lb. a day.

### Subsection 2.—Industrial Minerals

The total value of industrial minerals produced in Canada continued its upward trend in 1965. Producers' shipments of non-metallic minerals were valued at \$311,000,000 and of clay products and other structural materials of mineral origin at \$423,000,000 for a grand total of \$734,000,000, approximately 7 p.c. above 1964. Production records were established for a number of minerals including cement, nepheline syenite, potash, salt, silica, sodium sulphate and sulphur; however, production of several of the larger tonnage minerals, notably asbestos, gypsum, stone, and sand and gravel, was slightly below 1964 levels. Highlights of the more important developments during the year are reviewed below.

**Asbestos.**—Following six years of successive increases, the 1965 output of asbestos in Canada dropped almost 3 p.c. below that of the previous year to 1,380,210 tons valued at \$140,000,000; production in Quebec, which produces about 90 p.c. of the total, and Ontario was lower but that in Newfoundland increased 10 p.c. and that in British Columbia 26 p.c. Although the demand for most grades remained good during the year, Canadian asbestos is experiencing competition with fibre from other countries, including the Soviet Union, especially in overseas markets. Production in Russia is now estimated to be slightly ahead of Canadian output. The traditional source of asbestos in Russia has been from deposits at Sverdlovsk but two other sources being developed will increase substantially the production potential of and presumably the exports from that country. Mainly because of the expansion of the Russian industry, Canadian production has been growing at a lower rate than world output and in 1965 accounted for only 39 p.c. of the estimated 3,500,000-ton world total.

Asbestos Corporation Limited is proceeding with the development of a large asbestos deposit at Asbestos Hill, 40 miles south of Deception Bay in the Ungava area of Quebec, at an estimated cost of \$50,000,000. It is expected that this property will be brought into production in 1970 with a capacity of 100,000 tons of fibre per annum. Ore reserves exceed 20,000,000 tons.

Yukon Territory may soon join the ranks of asbestos producers. Cassiar Asbestos Corporation is preparing the Clinton Creek deposit for operation in 1968. It is located 40 miles northwest of Dawson and is expected to produce 40,000 tons of fibre per annum. Ore reserves are estimated to exceed 12,000,000 tons. In British Columbia, exploratory work is continuing on the Kutcho Creek property, 60 miles southeast of the Cassiar mine. In Ontario, an asbestos deposit in Reeves township, 40 miles southwest of Timmins, is under development. Canadian Johns-Manville Company has in hand an underground exploration program to prove up this interesting occurrence. The only production of asbestos recorded in Ontario in 1965 was from Hedman Mines Ltd., east of Matheson.

Recently there has been considerable interest in the development of new uses for asbestos. The addition of short-fibre asbestos to asphalt road-paving mixtures is reported to reduce cracking of the road surface and lengthen the pavement life; a project at the University of Florida has indicated that heat-resistant paper can be made from a mixture of asbestos and other inorganic fibres and Union Carbide Corporation has developed a special grade of asbestos from its California operation that is reported to be an effective addition to cellulose sulphite pulp in conventional paper-making.

### 17.—Quantity and Value of Producers' Shipments of Asbestos, 1956-65

NOTE.—Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	\$		tons	\$
1956.....	1,014,249	99,859,969	1961.....	1,173,695	128,955,900
1957.....	1,046,086	104,489,431	1962.....	1,215,814	130,281,966
1958.....	925,331	92,276,748	1963.....	1,275,530	136,956,180
1959.....	1,050,429	107,433,344	1964.....	1,419,851	145,193,443
1960.....	1,118,456	121,400,015	1965.....	1,380,210	139,805,322

**Potash.**—Potash mining is a recent development in Canada, the first output being recorded in 1962, valued at \$3,000,000. By 1965, the three Canadian producers in Saskatchewan had a total productive capacity of 1,820,000 tons of  $K_2O$  a year and produced 1,430,000 tons valued at \$54,000,000, although all three were not in operation for the full year and one plant was expanded late in the year.

During 1965, potash mine development was under way by six companies. Four shafts were being sunk, preliminary drilling of freeze holes was under way for six other shafts, two refineries were under construction and four additional refineries were being designed. Start of development by two, and possibly more, companies is expected in 1966. These projects indicate a Canadian potash productive capacity of 2,500,000 tons of  $K_2O$  in 1968, 7,000,000 tons in 1970, and 9,000,000 tons in 1975, although this achievement will depend on the successful meeting of the construction schedules laid out as well as on continued strength in potash markets. World potash consumption increased more than 10 p.c. in 1965, a rate much higher than normal, to set a new demand peak and, despite high rates of production throughout the world, shortages occurred in some areas and prices increased slightly. Although future markets cannot be guaranteed, there is good reason to believe that demand for all fertilizer materials will continue to increase at a higher rate than the average of the past 20 years. The enormous reserves of high-grade ore available in Saskatchewan assure producers of a dominant place in the world potash industry.

**Salt.**—The output of salt continued its upward trend in 1965, reaching a high point in quantity. All producing provinces recorded increases but Ontario continued to account for 84 p.c. of the total tonnage. Rock salt is mined in Nova Scotia and Ontario; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta. It is of interest to note that salt is also a by-product of the potash operations in Saskatchewan, more than one ton of salt being produced for every ton of refined potash. By 1970, when potash production is expected to approach 12,000,000 tons of product (KCl) annually, the rate of production of by-product salt will probably exceed 18,000,000 tons. However, major markets for this material are lacking; although research into utilization in road and soil stabilization programs is under way and small quantities are used for ice control during winter months, large tonnages will continue to accumulate at increasing rates as new potash mines are developed and brought into production.

#### 18.—Producers' Shipments of Salt, by Province, and Total Value, 1956-65

NOTE.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Year	Nova Scotia	Ontario	Manitoba	Saskat- chewan	Alberta	Canada	
						Quantity	Value

**Sulphur.**—"Sour" natural gas found in Alberta and British Columbia is the source of most of the elemental sulphur produced in Canada, other sources being smelter gas and pyrites. In all forms, sulphur production amounted to some 2,770,000 tons, of which sour gas was the source of 69.0 p.c. and the others 18.5 p.c. and 12.5 p.c., respectively. During 1965 elemental sulphur was produced at 10 plants in Alberta and at one plant in British Columbia. Total shipments amounted to 1,908,000 tons. A small amount of elemental sulphur is also produced at several oil refineries in Eastern Canada, where sour gas from refining processes is used as a source material.

Elemental sulphur productive capacity in Canada is now in excess of 2,500,000 tons a year and new capacity is expected to be in operation during 1966 and in later years. In addition to the normal sour gas sources, there are some very high concentrations of  $H_2S$  which will become sources of sulphur when production problems are solved. Also, production of oil from the Athabasca oil sand deposits in 1968 will contribute some 100,000 tons of sulphur annually.

World demand for sulphur is increasing and at present exceeds annual production. Shortages exist in some areas and prices have increased and may be forced to even higher levels to encourage the production of this essential element. Canada is now one of the major producers of elemental sulphur and occupies a strong competitive position in world markets because most of its production is a co-product of operations conducted for other purposes.

**19.—Quantity and Value of Sulphur Produced from Smelter Gases and in Pyrite and Pyrrhotite Shipments, and of Elemental Sulphur Sales, 1956-65**

<sup>2</sup> Includes sulphur in acid made from roasting

<sup>3</sup> Excludes pyrite and pyrrhotite used to produce

**Gypsum.**—Crude gypsum production continued at a high level in 1965 although, at 6,200,000 tons, it was slightly below that of 1964, the record year. Six provinces produce gypsum but about 77 p.c. of the total output is mined, mostly from open-pit operations, in Nova Scotia and is exported to gypsum product plants in the eastern United States.

In 1965 a new underground mine, the fourth in Canada, was brought into production by Western Gypsum Company near Silver Plains, 35 miles south of Winnipeg. This mine, which produces about 500 tons per day, is the chief source of crude gypsum for Western's gypsum products plant at Winnipeg; reserves are estimated at 20,000,000 tons. Elsewhere in Western Canada, interest in gypsum is at a high level. A United States firm is conducting feasibility and market studies with a view to exploiting gypsum deposits along the banks of the Lussier River in southeastern British Columbia, deposits that are reported to contain over 100,000,000 tons of good-quality gypsum. Interest is also being shown in the Peace River gypsum deposits of Wood Buffalo Park in northern Alberta. Under present legislation these deposits, being within a National Park, are not available to mining but negotiations are under way between the federal and provincial governments to transfer part of Wood Buffalo Park to the Province of Alberta with, perhaps, some easing of mining restrictions.

Although no new mining operations were established in Eastern Canada during the year, several companies were actively engaged in exploration programs in Nova Scotia.

**Sodium Sulphate.**—Production of sodium sulphate (salt cake) from alkali lake basins in Saskatchewan has increased steadily from 157,800 tons in 1957 to 346,000 tons in 1965. Demand for sodium sulphate, mainly for use in the production of kraft paper, has increased and expansion in the kraft paper industry indicates further increases in consumption. Operations in Saskatchewan are at near-capacity; the five producing plants have a total output capability of about 400,000 tons a year. The construction of three new plants, located at Cabri, Alsask and Fox Valley in the southern portion of the province, will increase that capability by about 300,000 tons a year, with initial production scheduled for 1967.

**Structural Materials.**—To keep pace with the steadily upward climb of construction in Canada, which reached \$9,900,000,000 in 1965, the total output of structural materials recorded a new high in that year with a total value of \$423,000,000, a figure 5 p.c. above the previous record attained in 1964. The large production of cement is particularly significant.

The use of lightweight aggregates made from expanded clay and shales is gaining ground. Several multi-storey buildings have been erected in Toronto using lightweight structural concrete and the lightweight aggregate industry in Montreal is striving to gain a share of the local concrete aggregate market. The wider acceptance of pre-cast concrete exterior wall panels has created a greater demand for coloured rock chips for use in exposed aggregate applications with white cement mortar.

In addition to pre-cast structural elements, such as roof and floor planks, wall panels and pre-stressed girders and beams, which are now commonly used in building construction, complete prefabricated concrete housing units are being produced on assembly lines to facilitate the speedy erection of multi-storey housing blocks. A dramatic demonstration of the potential of such mass production in the building industry is the \$13,500,000 project of Habitat 67 in Montreal. The zig-zag complex will contain 158 dwelling units consisting of 354 pre-cast concrete boxes (38.5' x 17.5' x 10') stacked, bolted and stressed together in a 12-storey pyramidal structure. Fibreglass utility units—kitchens, washrooms, bathrooms and closets—are also prefabricated and installed complete within the concrete boxes.

**Cement.**—The production volume of the Canadian cement industry in 1965 amounted to over 8,400,000 tons of portland cement, 7.4 p.c. above the 1964 output. Two new cement plants were completed during the year, adding 3,400,000 bbl. to the annual productive capacity: one, a \$14,000,000 plant with a capacity of 1,400,000 bbl. of cement a year, is located at Brookfield, N.S., and is operated by Maritime Cement Company, a subsidiary of Canada Cement Company Limited; the other is the \$16,000,000 Tuxedo plant of the Inland Cement Company, located at Winnipeg, Man. Expansions totalling

about \$27,000,000 were carried out on existing facilities: by addition of another kiln, the Villeneuve, Que., plant of the St. Lawrence Cement Company and the Picton, Ont., plant of Lake Ontario Cement Limited each doubled production capacity; also, about 2,000,000 bbl. of capacity was being added by the installation of a second kiln at the Montreal plant of Miron Company. The two new plants and the expansion of existing plant raised the annual rated capacity of the industry to 67,500,000 bbl. of portland cement at the end of 1965, an increase of 18 p.c. over rated capacity at the end of 1964. Plant expansions for completion in 1966 include the addition of a 1,000,000-bbl. kiln at Canada Cement's Havelock, N.B., plant, which will double its capacity; a new \$5,500,000 clinker-grinding mill at Floral near Saskatoon, Sask.; and a new Independent Cement Inc. plant at Joliette, Que., with an annual production capacity rated at 2,500,000 bbl.

Other additions to the industry are planned for the near future: a \$35,000,000, 3,000,000-bbl. integrated plant of the Lafarge Cement Quebec Ltd., at St. Constant, a few miles south of Montreal; the addition of a 3,250,000-bbl. kiln to the Woodstock, Ont., plant of the Canada Cement Company, which will raise its rated annual capacity to about 6,500,000 bbl.; expansion by the St. Lawrence Cement Company of its plant at Clarkson, Ont., by the addition of a new kiln and the installation of some most unusual and original machinery, which will raise the annual rated capacity of this plant to 10,000,000 bbl. by the end of 1967 and make it the largest cement manufacturing plant in Canada; and the installation of a new kiln by Ocean Cement Limited at their Bamberton plant on Vancouver Island, raising its annual rated capacity to 4,800,000 bbl. Thus, the annual rated capacity of domestic plants by the end of 1967 will be about 85,000,000 bbl., an increase of about 26 p.c. over the industry's capacity scheduled for 1966.

There is a trend toward the use of white cement in building designs; although none is being manufactured in Canada, some is ground here from imported white cement clinker.

## 21.—Producers' Shipments and Value, Imports, Exports and Apparent Consumption of Cement, 1956-65

<sup>3</sup> Includes imported clinker,

**Sand and Gravel.**—Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of haul. This accounts for the large number of small pits and the small number of large plants in operation. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries command much higher prices than ordinary sand. The greater part of the sand and gravel output is used in road improvement, concrete works or as railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone. Shipments in 1965 were slightly lower than in 1964, although they were valued about \$4,000,000 higher.

**Stone.**—The stone industry in Canada has two main divisions—stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries but the major part of the tonnage produced is crushed stone. Shipments in 1965 continued the upward trend in evidence over the past ten years.

<sup>1</sup> Excludes limestone used to make lime or cement.

**Clay Products.**—The sales value of clay products shipped in 1965 was considerably higher than in 1964. Common clays suitable for the production of building bricks and tile are found in nearly all the provinces; production is greatest in Ontario and Quebec where modernization and expansion of facilities is progressing. In 1965 a new tunnel kiln with an annual capacity of 84,000,000 bricks was added to a plant at Cooksville, Ont., and construction planned of a kiln and drier to increase the capacity of the plant at Streetsville, Ont., from 60,000,000 to 84,000,000 bricks a year. Two new whiteware plants were placed in operation in Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale. A new kiln placed in operation at Redcliff, Alta., in 1965 is successfully firing dry-pressed bricks from local red-firing clays and Whitemud formation clays from the Cypress Hills of Alberta and Saskatchewan.

#### 24.—Value (Total Sales) of Producers' Shipments of Clay Products, by Province, 1956-65

NOTE.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

#### Subsection 3.—Petroleum and Natural Gas

In 1965, production of crude oil averaged 812,000 bbl. daily and output of liquid hydrocarbons extracted from "wet" natural gas amounted to 124,000 bbl. daily, comparable figures for 1964 being 750,000 bbl. and 105,000 bbl., respectively. Thus, in total, the output of all liquid hydrocarbons averaged 936,000 bbl. daily, an increase of 11 p.c. over 1964. Net production of natural gas averaged 3,623,000 Mcf. a day, an 8.7-p.c. increase over the previous year.

Alberta continued as the dominant producer of petroleum, accounting for 63 p.c. of all crude oil produced in Canada in 1965; Saskatchewan accounted for 30 p.c., British Columbia for 5 p.c. and the remainder came principally from Manitoba along with small volumes from Ontario and the Northwest Territories. Alberta also produced 93 p.c. of the country's total output of propane, butane and pentanes plus. Of the total of 124,000 bbl., 77,000 bbl. were pentanes plus, 28,000 bbl. were propane and 19,000 bbl. were butane.

The oil and gas industry drilled 3,780 wells (16,502,000 feet) in 1965, consisting of 1,574 exploratory wells (6,967,000 feet) and 2,206 field development wells (9,535,000 feet). The footage was slightly more than in 1964 when 16,082,000 feet were drilled but the number of wells completed was considerably more than the 3,569 drilled in 1964. The reduction in footage per well in 1965 was attributable almost entirely to development drilling in shallower fields.

Additions to published reserves of oil and natural gas in 1965 were much smaller than in the previous year. However, the 1964 increases were mainly the result of revisions to established fields following the introduction of pressure maintenance schemes. Newly discovered resources in 1965 were roughly twice those of 1964 but reserve estimates include only a minor portion of the new reserves discovered in northwestern Alberta. At the end of the year there were 6,711,000,000 bbl. of recoverable crude oil reserves (5,720,000,000 bbl. being in Alberta) and an additional 999,000,000 bbl. of natural gas liquids (952,000,000 bbl. being in Alberta). Reserves of natural gas amounted to 44,400,000,000 Mcf. with 36,400,000,000 Mcf. located in Alberta, 6,800,000,000 Mcf. in British Columbia and lesser quantities in other provinces. Developments under way in 1966 are expected to increase considerably the estimate of oil reserves for Alberta.

## 25.—Quantity and Value of Producers' Shipments of Crude Petroleum, by Province, 1956-65

**Alberta.**—The highlight of 1965 in Alberta was the discovery in February of oil and gas near Rainbow Lake in northwestern Alberta by Banff Oil Ltd., Acquitaine Company of Canada Ltd., and Socony Mobil Oil of Canada Ltd. The productive zones are comparatively thick and porous and have excellent producing characteristics. The main reservoir is the Middle Devonian, Keg River reef having thicknesses up to 600 feet. The discovery initiated a rush to acquire land and commence work but the isolated location, some 400 miles north of Edmonton, and muskeg conditions hampered initial operations. Nevertheless, the Rainbow Lake discovery materially helped to make 1965 a record year for exploratory drilling in Western Canada. The Keg River formation and the overlying muskeg formation extend from northwestern Alberta and adjacent areas in British Columbia and the Northwest Territories southeastward into Saskatchewan and Manitoba, thus indicating large areas for future exploration.

Of the 10,200,000 feet drilled in Alberta in 1965, 4,500,000 feet was exploratory drilling. This was 566,000 feet more than in 1964 but development drilling declined by 700,000 feet. The number of exploratory wells totalled 873 in 1965 against 718 in 1964 and the number of development wells was 1,083 compared with 1,122 in 1964.

Recent drilling in or near the Alberta Foothills has been noteworthy for the discoveries of wet natural gas. A large Devonian gas reservoir at Gold Creek, 25 miles southeast of Grande Prairie is an important example. There the gas tested 150 bbl. per Mcf. and the field has "pay" sections greater than 200 feet. In the Obed region, 35 miles west of Edson, additional Devonian gas was discovered which has a sulphur content of 25 p.c., making the gas as valuable for sulphur as for pipeline gas.

Construction progressed favourably at the plant of Great Canadian Oil Sands Limited, 20 miles north of Fort McMurray. The schedule calls for the commencement of commercial production of oil from the Athabasca bituminous sands in the latter part of 1967. This project, to cost an estimated \$230,000,000 including a pipeline from Edmonton to the site, will produce some 45,000 bbl. daily of crude, tailored to meet refinery requirements.

**Saskatchewan.**—Despite a lack of major discoveries of either oil or gas, the number of wells drilled in the province continued to increase. Indeed, the 1,284 wells drilled in 1965 was a record but footage drilled, a total of 4,500,000 feet, was considerably less than the 5,300,000-foot record established in 1957. The lack of large discoveries was reflected in a decline in exploratory work; the number of exploratory wells decreased from 478 in 1964 to 438 in 1965 and footage drilled showed a corresponding trend from 1,660,000 feet to 1,620,000 feet. There were, however, several small oil discoveries; of the total 1,284 wells drilled, 697 were oil wells, 57 were gas wells, 11 were service wells and 519 were dry and abandoned.

**British Columbia.**—In 1965, oil discoveries about 60 miles north of Fort St. John reversed the previously declining trend of exploration in British Columbia and drilling for natural gas in the Fort Wilson area added to the upsurge in activity created by these oil discoveries. Drilling increased to 1,080,000 feet involving 249 wells from 663,000 feet and 140 wells in 1964; exploration wells increased from 53 to 103 and development well completions from 87 to 146. The most significant oil discovery was in the Weasel River area which extended by several miles the oil trend indicated by the 1964 Nancy discovery and a new gas discovery 70 miles southwest of Fort St. John indicated an entirely new area for production. Of the 249 wells drilled in the province, 113 were oil wells, 41 were gas wells, two were service wells and 93 were abandoned.

**Manitoba.**—The revival in activity that occurred in 1963 and continued in 1964 came to an end in 1965. Drilling declined from 107 wells in 1964 to 64 in 1965 and footage from 247,000 feet to 165,000 feet. However, the fact that Manitoba has the same formations as those in which the Rainbow Lake discoveries were made in Alberta may encourage a return of activity. In 1965, 26 oil wells were completed and the remaining 38 wells were dry.

**Yukon and Northwest Territories.**—Drilling continued in 1965 at about the same rate as in the previous year but no important discoveries were made. Eighteen wells were drilled, one of which encountered oil; two found gas but were not of commercial consequence.

**Eastern Canada.**—In Ontario a sharp decrease in both exploratory and development work resulted in fewer wells and less footage drilled. No discoveries of importance were made. The 204 wells completed included 23 oil wells, 68 gas wells, 16 service wells and 97 dry holes. Exploration continued in Hudson Bay and the lowlands on its southern shore. In Quebec, two exploratory dry holes of about 6,000 feet each were drilled although minor gas was reported. One dry hole, 2,941 feet in depth, was drilled in New Brunswick.

Intensive exploration was carried out in the East Coast offshore area and land holdings were nearly doubled to 114,000,000 acres. There were 24 core-hole tests completed offshore and five core-holes on Sable Island. On the west coast of Newfoundland two dry holes aggregating 4,900 feet were drilled on the Port au Port peninsula.

**Petroleum Refining and Marketing.**—Over 30,000 bbl. of daily crude oil refining capacity was added to established refineries in 1965 bringing the total to 1,083,150 bbl. Canada now has the eighth largest industry in the world in terms of crude treating capacity. Moreover, it is unquestionably one of the most advanced in terms of down-stream refinery units such as catalytic cracking and catalytic reforming.

#### 27.—Crude Oil Refining Capacity, by Region, as at Jan. 1, 1946, 1956 and 1966

Region	1946		1956		1966

In 1965, Canadian refineries received a daily average of 967,000 bbl. of crude oil with domestic oil accounting for 59 p.c. of total receipts. Imported crude, on an average daily basis, amounted to 395,000 bbl. with 236,000 coming from Venezuela, 63,000 from Saudi Arabia, 60,000 from Iran and Iraq combined, 22,000 from Kuwait, 11,000 from Trinidad and 3,000 from Qatar. Imports of refined products increased considerably over 1964 to an average of 165,000 bbl. daily, a gain of 45,000 bbl. daily. Light and heavy fuel oil and diesel oil comprised the major categories of imports.

Domestic demand in 1965 was made up of 1,063,000 bbl. daily of sales to consumers and 80,000 bbl. daily used in the petroleum industry, a total of 1,143,000 bbl. daily compared with the 1964 level of 1,069,000 bbl. Exports of crude, all to the United States, averaged 295,000 bbl. daily and product exports, consisting largely of natural gas liquids such as propane and butane, amounted to 28,000 bbl. daily.

**Natural Gas Processing and Marketing.**—Natural gas consumers and gas pipeline companies require gas that contains relatively little non-flammable content and is free of noxious components. Since a large proportion of gas produced in Canada does not meet market specifications, there is a major gas processing industry located mainly in Alberta which extracts ingredients that, in themselves, are valuable. These by-products include the natural gas liquids such as propane, butane and pentanes plus and elemental sulphur. At the end of 1965 there were 103 gas plants operating in Canada—91 in Alberta, four in British Columbia, six in Saskatchewan and two in Ontario. The addition in 1965 of 700,000 Mcf. daily of raw gas treating capacity raised the total to 6,100,000 Mcf. daily. Although nine plants were added, only two were of large size—the Westcoast Transmission Company Limited's plant for the Clarke Lake field near Fort Nelson in British Columbia having a raw gas capacity of 200,000 Mcf. daily, and the Edson plant of Hudson's Bay Oil and Gas Company Limited having a capacity of 309,000 Mcf. daily.

Of the 1,320,000,000 Mcf. of Canadian gas plus imports of 16,000,000 Mcf. available for consumption in 1965, 404,000,000 Mcf. went to the United States, 568,000,000 Mcf. was sold to residential, commercial and industrial consumers in Canada, and the remainder was used by the industry in pipeline, field or plant use. In total, 722,000,000 Mcf. of gas was consumed in Canada compared with 633,000,000 Mcf. in 1964. Net additions to storage in 1965 amounted to 210,000,000 Mcf. compared with 190,000,000 Mcf. in 1964.

Table 29 shows sales of natural gas in Canada as well as the number of customers. During 1965, natural gas supplied roughly 17 p.c. of Canada's energy requirements.

**Subsection 4.—Coal\***

Production from Canadian coal mines in 1965 was 2.4 p.c. higher than in 1964; increased production of subbituminous and lignite coals more than compensated for a lower output of bituminous coal. Compared with 1956, production in 1965 declined about 3,300,000 tons, consumption about 9,500,000 tons and imports about 5,600,000 tons. Exports, on the other hand, showed a fairly steady increase over the decade, from 600,000 tons in 1956 to 1,200,000 tons in 1965. This increase, however, was attributable only to higher exports of western bituminous coking coal, mainly to Japan. The weak competitive position of Canadian coals is caused by several factors but mainly by high production costs due to low productivity in comparison with coal mines in the United States, and by high costs of moving coal long distances, particularly bituminous coal from mines in Nova Scotia and New Brunswick to the industrial centres of Ontario and Quebec. Mechanization of production, underground and surface coal preparation, particularly of slack and fine sizes, and efforts to control quality through coal sampling and analysis have all been increased to enable the industry to supply higher quality products at reduced costs. On the basis of costs per ton in Western Canada, significant improvement was noted but in Eastern Canada costs continued to increase in 1965.

Assistance to the coal industry was continued by the federal and provincial governments through research programs. The problem of fine coal production received particular attention, with research directed toward improved methods of mining, beneficiation and combustion. Technical assistance was also rendered in the field of quality control through sampling and analysis and through studies of the coking properties of coals in relation to their preparation for export markets and their use in prospective steel industries. Financially, the Federal Government continued assistance to the coal industry through payments administered by the Dominion Coal Board with aid in the acquisition of new equipment and subventions on coal transportation (see pp. 583-585).

**Production and Consumption.**—Coal produced in Canada in 1965 amounted to 11,589,000 tons with an average value of \$6.55 a ton. The number of man-days employed by the industry was 2,261,185, compared with 2,230,376 in 1964. In Nova Scotia, which is the major producing province and the one whose economy is most affected by changing coal markets, there was an increase in coal-mine employment of 2.6 p.c. to 1,565,693 man-days; increases were also shown in Alberta, Saskatchewan and the Yukon, amounting to 1.3 p.c., 6.4 p.c., and 2.5 p.c., respectively. In New Brunswick employment decreased 1.1 p.c. and in British Columbia 9.9 p.c.

Of the coal produced, 60.1 p.c. was bituminous with an average value of \$9.44 a ton at the mine, 22.0 p.c. was subbituminous with a value of \$2.52 a ton, and 17.8 p.c. was lignite with a value of \$1.80 a ton. The proportion of the output won by stripping methods was 47.9 p.c. The output per man-day of coal from strip mines was 30.40 tons and that from underground mines 3.45 tons representing a decrease from 1964 of 1.67 tons for the former and 0.28 tons for the latter. The over-all output per man-day was 16.36 tons compared with 15.89 tons in 1964.

Coal consumption in Canada was about 26,775,000 tons in 1965, somewhat higher than the 25,100,000 tons consumed in 1964. About 62 p.c. was imported, of which over 96 p.c. was bituminous coal used mainly in Ontario and Quebec; imports were 10.7 p.c. higher than in 1964. The production of coke used about 5,900,000 tons of coal, over 90 p.c. of which was imported. Sales of coal to the commercial and household heating markets amounted to about 2,100,000 tons, and the amount used by industrial consumers including thermal-electric power plants, was about 15,500,000 tons, an increase of 15.1 p.c. over 1964. There were 1,200,000 tons of Canadian coal exported in 1965, most of it from mines in Western Canada going to Japan and the United States for blending in the manufacture of metallurgical coke. About 4,800 tons went to the Island of St. Pierre

\* This Subsection contains final 1965 figures for coal which do not quite agree with the preliminary figures given in the introductory write-up to Section 1.

from Nova Scotia and about 30,000 tons from New Brunswick to the eastern United States. The manufacture of briquettes amounted to 68,416 tons in 1965, compared with 59,913 tons in 1964.

### 30.—Coal Production, by Province, and Total Value, 1956-65

NOTE.—Figures from 1874 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Nova Scotia	New Brunswick	Saskatchewan	Alberta	British Columbia	Yukon Territory	Canada

The amounts and percentages of domestic and imported coal apparently consumed in Canada in the years 1956-65 are shown in Table 31 and imports by type as well as total exports in Table 32. The imports represent amounts taken out of bond for consumption during the respective years, regardless of when received. Thus, the totals are exclusive of coal landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond.

### 31.—Consumption of Canadian and Imported Coal in Canada, 1956-65

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

Year	Canadian Coal <sup>1</sup>		Imported Coal 'Entered for Consumption' <sup>2</sup>				Grand Total	Consumption per Capita
			From United States	From Britain	Total <sup>3</sup>			
	tons	p.c.	tons	tons	tons	p.c.	tons	tons
1956.....	14,115,095	38.9	22,045,485	153,404	22,198,049	61.1	36,313,144	2.26

<sup>1</sup> Includes coal ex-warehoused for ships' stores.

<sup>2</sup> Coal or coke.

<sup>3</sup> Includes anthracite dust.

<sup>4</sup> Includes coal dust, ground coal and coal *n.o.p.*

**Provincial Activities in the Industry.**—Coal is produced in five provinces and a large share of the market for the industry is concentrated in Central Canada where there is no coal production. A small amount of coal is also mined in the Yukon Territory.

*Nova Scotia's* 1965 coal production of 4,134,161 tons, which accounted for 35.7 p.c. of the total Canadian output, was 3.7 p.c. lower than in 1964. The output is mainly high volatile bituminous coking coal mined in the Sydney, Cumberland and Pictou areas, although some non-coking bituminous coal is mined in the St. Rose, Inverness and Port Hood areas of Cape Breton Island. The average value at the mines was \$11.00 a ton and the output per man-day was about 2.64 tons. All production comes from underground mines, which are mostly mechanized. About 56 p.c. of the production was shipped to other provinces, mainly Central Canada, to be used for industrial purposes; the remainder was used locally for steam-raising, power generation, household and commercial heating and the manufacture of metallurgical coke.

*New Brunswick's* production, of which more than 85 p.c. is strip-mined, is entirely high volatile bituminous coal mainly from the Minto area with a small amount from strip mines in the Chipman and Coal Creek areas. The 1965 production of 996,328 tons was 8.6 p.c. of Canada's output. Average output per man-day from strip mines was 5.62 tons and from underground mines 1.88 tons. The coal had an average value at the mines of \$8.67 a ton. A large part of the production is used locally for heating, power generation and processing; in 1965 about 5.3 p.c. was shipped to Central Canada and about 3.1 p.c. to the United States.

*Saskatchewan's* coal production is entirely lignite, mined by stripping in the Bienfait and Estevan areas in the Souris Valley; this is the only active lignite coal-field in Canada. Production in 1965 was 3.5 p.c. higher than in the previous year, amounting to 2,063,935 tons and representing 17.8 p.c. of the Canadian production. The average output per man-day was 43.784 tons and the average value at the mine was \$1.80 a ton. This is the cheapest source of coal in Canada. The Estevan area serves the provincially owned Boundary Dam thermal-power generating station which uses a large portion of the total lignite production. Almost 39 p.c. of the output was shipped to Manitoba and Ontario for industrial, commercial and household use; the remainder was used within the province for similar purposes. About 31,560 tons of briquettes were produced from lignite, an increase of 45.6 p.c. over the 1964 output.

*Alberta's* production of coal increased 14.9 p.c. in 1965 to 3,413,928 tons and was 29.5 p.c. of Canada's total. Several types are available in the province, ranging from

semi-anthracite mined in the Cascade area to subbituminous. Coking bituminous coals are present in the Inner Foothills Belt but, because of market conditions, they are mined mainly in the Cascade and Crowsnest areas and a large part of the production is exported to Japan for use in metallurgical industries. In several areas of the foothills, lower rank bituminous non-coking coals are available but production in 1965 was confined to the Lethbridge and Coalspur areas and was very small. The other coal areas produce subbituminous coals which made up almost 75 p.c. of the province's output in 1965 and are used mainly for household and commercial heating and thermal power generation; increasing quantities are being used for the latter purpose. The largest producing areas for subbituminous coals are Castor, Drumheller, Pembina, Sheerness and Taber; in 1965 mines in these areas produced more than 88 p.c. of the Canadian subbituminous coal output of 2,554,752 tons, an amount more than 21 p.c. higher than in the previous year. The output of bituminous coal decreased slightly to 859,176 tons. Of the total output in Alberta, 71 p.c. was won by stripping, the average output per man-day being 27.482 tons compared with 4.870 tons for underground mines. The average value of bituminous coal was \$6.72 a ton at the mine, and that of subbituminous coal \$2.52 a ton. Of the provincial production, 0.9 p.c. was shipped to Ontario, 3.8 p.c. (mainly subbituminous) to Manitoba, 11.4 p.c. to Saskatchewan and 8.1 p.c. to British Columbia. The output of briquettes, which are made from the semi-anthracite and low volatile bituminous coals of the Cascade area, was about 37,000 tons.

More than 93 p.c. of *British Columbia's* coal output in 1965 came from the Crowsnest area (East Kootenay district) and most of the remainder came from Vancouver Island, with a small output from mines in the northern mainland. The coals range from high volatile to low volatile bituminous coking coals and over 79 p.c. came from underground mines. Production decreased to about 971,465 tons, representing 8.5 p.c. of the country's output. The average value was \$5.97 a ton at the mine and the average output per man-day was 33.487 tons for strip mines and 6.284 tons for underground mines. Of the total production, 12.5 p.c. was shipped to Manitoba, 3 p.c. to Ontario and small quantities to Alberta and Saskatchewan. More than 400,000 tons of bituminous coking coal from the Crowsnest area were exported, some to the United States but most of it to Japan.

In the *Yukon Territory*, about 8,800 tons of coal were mined from a single underground mine with an average output per man-day of 3.696 tons. This coal was valued at \$9.73 a ton and was all used locally.

## Section 2.—Government Aid to the Mineral Industry

### Subsection 1.—Federal Government Aid

Federal assistance to the mining industry takes the form of the provision of detailed geological, topographical, geodetic, geographical and marine data which are of basic importance to the discovery and development of the mineral resources of Canada; the provision, through laboratory and pilot-plant research, of technical information concerning the processing of ores, industrial minerals and fuels on a commercial scale; financial and technical assistance to the gold mining industry under the Emergency Gold Mining Assistance Act, and certain tax incentives (see Chapter XXIII, Section 2 on Taxation in Canada).

**The Department of Energy, Mines and Resources.**—The federal Department of Energy, Mines and Resources came into being on Oct. 1, 1966. It embraces all of the functions of the former Department of Mines and Technical Surveys, some of the functions of the former Department of Northern Affairs and National Resources, and certain new functions not previously exercised by the Federal Government. The new Department is made up of four Groups—Research, Mineral Development, Water Management, and Energy Development—each headed by an assistant deputy minister and each aiding the Canadian mineral industry in some way.

*The Research Group.*—This Group contains most of the units of the old Department of Mines and Technical Surveys—the Mines Branch, the Geological Survey of Canada, the Surveys and Mapping Branch, the Observatories Branch and the Geographical Branch.

The *Mines Branch* is a large laboratory and pilot-plant complex carrying out applied and basic research to discover new and better methods of ensuring mine safety, extracting and refining ores and other minerals, and using metals and minerals in industry and defence. Gratifying results have been achieved in the extraction of metals from ores and in the refining of low-grade crude oil, in the automation of grinding circuits and cyanide-leaching processes in gold mills and in the leaching of ground or crushed uranium ores by bacteria. In pyrometallurgy—the extraction of metals by heat—applied research is concentrated principally on the combination of shaft and electric furnaces for smelting iron ore. In petroleum refining, research concerns hydrogenation, catalytic cracking, and catalyst development. This work is highly significant because of the opening-up of unconventional sources such as the Athabasca tar sands and the co-called Colorado oil shales, whose economic importance had been recognized by the Mines Branch for many years. A close tie-in with producers is maintained in mineral processing in which the emphasis is on the concentration of metallic ores and on the processing and improvement of industrial minerals. In the field of mineral sciences, the physical, chemical, crystallographic and magnetic studies being undertaken on sulphide minerals are of fundamental interest. In physical metallurgy, experiments on new alloy combinations continue to yield valuable practical benefits for Canadian industry.

The *Geological Survey of Canada* sends about 100 parties into the field each year to collect scientific information and to make observations on the distribution, structure, metamorphism, palaeontology, physical properties and economic deposits of the nation's rocks and surficial deposits. The Survey does not follow up promising mineral or metal occurrences with detailed exploration; this is left to the multitude of private development and mining companies. Its job is to provide geological maps and basic information by which prospectors, exploration companies and others can chart their course (see also pp. 32-33).

Stratigraphic and structural studies are being carried out in most provinces; recently they have included Operation Selwyn in the Yukon, which so far has examined 20,000 sq. miles of the northern Cordillera, and Operation Bow-Athabasca in the southern Rockies. Both these were helicopter-supported projects. Stratigraphic studies continue in various parts of the Arctic islands, and field investigation of the bituminous rocks of Melville Island has been supplemented by sulphur-isotope studies on hydrocarbons. These rocks contain the first known bituminous deposits in the Arctic, where the oil industry has carried out considerable exploratory work in the past few years. As a guide to possible future oil exploration, geophysical studies have been made on the eastern continental margin. An aeromagnetic survey of the Labrador Continental Shelf and a seismic investigation of the Gulf of St. Lawrence will provide information on the thickness of the sedimentary rocks, and some information can be expected on the nature of possible sedimentary basins. Other recent geophysical work included seismic investigations of the western Rocky Mountains and of bedrock configuration beneath overburden in British Columbia and Saskatchewan and in the uranium-producing area of Elliot Lake in Ontario. Aeromagnetic surveys in co-operation with provincial governments have continued, mostly by contract. Field geochemical and biogeochemical techniques, in which mineral deposits are traced through the analysis of minute quantities of minerals in rivers, the soil, and vegetation, continue to be used and developed by the Geological Survey. Two projects using these methods were recently completed in the Bathurst-Jacquet River area of New Brunswick, and around Cobalt, Ont.

A great deal of fundamental geophysical work of interest to prospectors is being carried out by several divisions of the *Observatories Branch*. Its airborne geomagnetic surveys which have ranged all over Canada and across the Atlantic to Scandinavia, have become famous. There is also a permanent network of geomagnetic observatories, supplemented by temporary stations, of which about 25 are occupied in a field season, to determine secular

geomagnetic change. The Observatories gravity research contributes about 8,000 observations annually to its regional mapping program. Over 20 permanent first-order stations are being operated in seismic research, and a large-scale crustal refraction survey with nine recording parties was recently completed in and around Yellowknife, N.W.T. Research continues into the seismicity of Canada, surface wave dispersion, earthquake mechanisms, and equilibrium heat flow.

No mineral development is possible without accurate, large-scale topographical maps, and progress in this field by the *Surveys and Mapping Branch* continues to be gratifying. The functions and current operations of this Branch are described briefly in Chapter I, pp. 32-33.

The *Geographical Branch* studies the natural landscape of Canada and man's impact on it. Mining companies wishing to locate in the Arctic may profit from the Branch's studies of Arctic landforms, the effects of permafrost, and other environmental features.

The Branches of the Research Group also pool their functions in the Polar Continental Shelf Project, a continuing scientific study of the Queen Elizabeth Islands and the surrounding seas, which has already yielded a great deal of geophysical information.

*The Mineral Development Group.*—This Group conducts broad economic and mineral-commodity studies and gathers comprehensive domestic and world data on all minerals, including energy minerals, for the use of government and private industry. It also licenses and leases mineral exploration in offshore areas south of the 60th parallel and in Hudson Bay, administers the Emergency Gold Mining Assistance Act (see p. 585) and the Explosives Act, and co-ordinates the Department's foreign-aid work.

Current activities in these fields include regional studies of the Atlantic Provinces' mineral economy, including the Cape Breton coal situation; a digest of the mining laws of Canada; assessment of several mineral projects throughout Canada for which federal support has been requested; participation in international minerals work through such agencies as the United Nations Lead-Zinc Study Group, the Organizations for Economic Co-operation and Development, and the General Agreement on Tariffs and Trade. In collaboration with the External Aid Office, the Group is setting up training courses for mineral scientists, technologists and economists brought to Canada under the various aid programs and is advising on mineral projects undertaken by Canada as an aid to developing countries. Also of considerable value to the mining industry are the Roads to Resources Program and the Development Road Program, described in Chapter XIX, Part III, Section 2.

*The Water Management Group.*—The role of this Group is to advise on federal water policies and to co-ordinate the work of federal agencies in water-resource management and water pollution. The task is essentially twofold: the most efficient and beneficial use of Canada's streams and lakes, and the preservation, or restoration, of their purity. An illustration of the work concerning mining companies is the monitoring of mine waste effluents in eight base-metal mining areas of New Brunswick. This study will be directed from a regional laboratory at Moncton, with the collaboration of the Department of Fisheries, the Province of New Brunswick, and the mining companies. A similar unit and program are being set up at Calgary, Alta. Personnel is also being recruited to conduct basic and applied research in the abatement of mine pollution in general.

*The Energy Development Group.*—This Group, still in the process of formation (December 1966), will examine Canada's total energy situation and requirements. New gas and oil discoveries and the great strides being made in the development of nuclear power make it imperative that policy-making reflect Canada's total energy picture.

**The Dominion Coal Board.\***—The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to

\* Revised under the direction of Hon. J. Watson MacNaught, Chairman of the Dominion Coal Board, Ottawa.

the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of administering, in accordance with regulations of the Governor in Council, any coal subventions or subsidies voted by Parliament.

The Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- (3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of government departments relating to coal; and
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

The Act authorizes a Board membership of seven, including the chairman. The latter is the Chief Executive Officer, has the status of a Deputy Minister, spends full time on the Board's business, receives a salary and is in charge of a public service staff. The other members, men of long experience and expert knowledge of aspects and regions of the Canadian coal industry, receive *per diem* payments and travelling expenses while attending Board meetings or while otherwise officially engaged on Board business.

In general, the Board and its staff constitute a central agency through which representations on coal matters are made to the Government from any sector of the industry or the public. Conducting a continuous study of developments and problems within the industry, exchanging information with provincial authorities concerned with coal and with national authorities and agencies in other countries and maintaining the most complete files of Canadian coal information in existence, the Board makes recommendations to the Government and reports to Parliament through the Minister of Energy, Mines and Resources. In view of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel.

Since its inception, the Board has worked toward the co-ordination of the activities relating to coal of various government departments and other agencies. Its own responsibilities in research on the mining and utilization of coal have been carried out mainly by the Fuels and Mining Practice Division, Mines Branch, Department of Energy, Mines and Resources, although, on occasion, the Board has recommended or commissioned specialized types of research to be conducted outside the government service. As a contribution to the co-ordination of coal research and to the dissemination to the industry of technical information resulting from research, the Board initiated the now annual Dominion-Provincial Conferences on Coal. The Dominion Bureau of Statistics collects much of the statistical information required by the Board.

Government purchases of fuel, which constitute an important outlet for coal, claim a part of the time of the Board's staff in an advisory capacity. Advice on fuel matters is also continuously available to all government departments and agencies. A senior official of the Coal Board is chairman of the Interdepartmental Fuel Committee, which advises on the supply, purchase and utilization of fuel for the Department of National Defence, and of the Dominion Fuel Committee, which is organized along similar lines as an advisory body to other government departments.

The subvention assistance on the movement of Canadian coals, which the Board administers, is authorized from year to year by votes of money by Parliament; payments

are in accordance with Regulations established by Order in Council. This assistance, which has been provided in varying degrees for the past 30 years, was designed to further the marketing of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. During the year ended Mar. 31, 1965, a total of 4,857,453 tons of coal was shipped under subvention and \$21,602,195 was paid in assistance; in 1965-66, the figures were 4,533,309 tons and \$22,363,631, respectively. Costs and conditions of the coal industry being subject to variations, the Board must review from time to time the rates of subvention and the areas where the assistance is required.

As agent to the Minister of Energy, Mines and Resources, the Board receives applications and administers loans under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1958, c. 36; SC 1959, c. 39; SC 1960-61, c. 20; and SC 1962-63, c. 13). The Board also administers payments under the Canadian Coal Equity Act (RSC 1952, c. 34), which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1965, payments under this Act totalling \$212,772 were made on 429,843 tons of coal and in the following year payments totalling \$134,611 were made on 271,942 tons.

**Emergency Gold Mining Assistance Act.**—Under this Act, which came into force in 1948 (RSC 1952, c. 95), financial assistance is provided to marginal gold mines to counteract the effects of increasing costs of production and a fixed price for gold. By enabling gold mines to extend their productive life, the subventions help communities dependent on gold mining to adjust gradually to diminishing support.

In 1963 an amendment extended the provisions of the Act for four years to Dec. 31, 1967 and also introduced a restriction which affects lode gold mines coming into production after June 30, 1965; such mines are eligible for assistance only if the mine provides direct economic support to an existing community, that is, if the majority of the persons employed at the mine reside in one or more of the established communities that are specified in a schedule to the Act. The restriction does not apply to lode mines in production before July 1, 1965 nor to placer gold mines.

The amount of assistance payable to an operator is determined by a formula and is based on the average cost of production per ounce and the number of ounces produced; it ranges from zero to \$10.27 per ounce produced. Gold mines having a cost of production of \$26.50 or less per ounce receive no assistance and those having a cost of production of \$45.00 or more per ounce receive the maximum rate of \$10.27 per ounce.

Under the current formula the assistance payable to the operator of a gold mine is computed by adding 25 p.c. to the product of two factors, the "rate of assistance" and the number of "assistance ounces". The number of assistance ounces is two thirds of the total ounces produced and sold to the Royal Canadian Mint by a mine in a calendar year. The rate-of-assistance factor is two thirds of the amount by which the average cost of production exceeds \$26.50. The rate-of-assistance factor is limited to a maximum of \$12.33 which is reached when the average cost of production rises to \$45 per ounce of gold produced. The average cost of production is determined by dividing the total allowable costs by the total number of ounces produced in the form of bullion from the mine in a calendar year. Only those ounces of gold that have been sold to the Royal Canadian Mint are eligible for inclusion in the assistance-ounces factor. The cost of production includes mining, milling, smelting, refining, transportation and administration costs. Allowances are made for depreciation, pre-production costs and expenditures on exploration and development on the mine property in accordance with the Regulations.

The amounts paid to operators of gold mines to Mar. 31, 1966 for the years 1948-65, inclusive, totalled \$216,184,450 on a production of 51,306,777 oz.t. of gold produced and sold in accordance with the requirements of the Act. The assistance payable for gold produced and sold under the Act in the calendar year 1965 is estimated to be \$15,300,000.

The Act is administered by the Department of Energy, Mines and Resources with the aid of the Office of the Comptroller of the Treasury in accounting matters.

### Subsection 2.—Provincial Government Aid\*

**Newfoundland.**—The Newfoundland Government, through the Mines Branch of the Department of Mines, Agriculture and Resources, provides several valuable services to those interested or involved in exploration and mining, including: the conduct of a continuing program of mineral assessment designed to encourage development of the mineral resources of the province; the inspection of exploration work carried out on concession areas and the examination of mining operations; the administration of beaches (control of removal of sand and gravel as a conservation measure) and the collection of data relevant to the control of sand removal; the identification of mineral rock specimens submitted by the public and the examination of corresponding occurrences where such is warranted; the dispensing of technical advice, in so far as possible, to those who seek such service (i.e., in hydrological problems and on the availability of quarryable peat moss to be removed by permit); co-operation with the Geological Survey of Canada and other Federal Government agencies; and the preparation and publication of data useful for educational and general informational purposes, including the preparation of mineral and rock sample sets. Geological reports, geophysical maps and compilations of general data pertaining to specific areas are procurable at nominal cost and other information from unclassified files is made available to interested parties. Prospector's or miner's permits are issued by the Mines Branch and mining claims are recorded.

**Nova Scotia.**—Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. Mining machinery and equipment to be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

**New Brunswick.**—The Mines Branch of the Department of Lands and Mines has five divisions. The *Mineral Lands Division* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The *Mine Inspection and Engineering Division* administers the safety regulations governing operations under the Mining Act. All mines are regularly inspected, laboratory facilities are maintained and certain equipment used in mines must be approved by the Division. The *Geological Division* carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution, mineral and rock specimens are examined for prospectors and preliminary examinations of mineral prospects are made when requested and circumstances warrant. The *Mine Assessment Division* is responsible for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The *Bathurst Division* serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aeromagnetic maps are available for perusal and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

\* Compiled from material supplied by the respective provincial governments.

**Quebec.**—The Department of Natural Resources, through its Mineral Resources Branch, administers general mining in the province, under authority of the Mining Act (SQ 1965, c. 34). The Branch comprises four Divisions—Geological Services, Mining Services, Laboratories, and Pilot Plant.

The work of the Geological Services Division is conducted through a Geological Exploration Service, a Mineral Deposits Service, a Mapping Service and a Water, Gas and Petroleum Service. It is responsible for the geological surveying of Quebec territory, with a view to promoting the development of the province's mineral resources. Yearly expeditions in the field provide information upon which detailed reports on various districts and geological maps are prepared for the use of interested persons. A unique mapping index is maintained through which prospectors may quickly obtain accurate information of value to their operations. The Water, Gas and Petroleum Division conducts hydro-geological surveys in quest of subterranean water and supervises drilling and boring operations undertaken by private companies in search of natural gas and oil.

The Mining Services Division includes an Engineering Works Service, a Mining Titles Service, a Mining Exploration Service and a Mines Inspection Service. It issues prospecting and development permits, grants mining lands for working purposes, and collects fees for mining rights. It is responsible for the inspection of mines, quarries and processing plants to ensure that operations are consistent with regulations and to ensure the safety of mine workers. A trained rescue crew of about 375 members operates as three main groups and nine secondary groups. In addition, all workers in active underground mines are trained in rescue operations. The Department undertakes the construction and maintenance of mining roads as authorized under the Mining Act; it has constructed and paid the full cost of certain highways leading to new mining districts. In addition, to avoid the establishment of slums in the vicinity of mining enterprises, the Department regulates the use of the land and authorizes the building of well-organized residential areas.

Laboratories, operated for the use of prospectors, geologists, engineers and mine operators, include equipment for mineralogy, petrography, the dressing of ore, wet and dry assays, spectrography or X-ray photography. Mineral determinations are made free of charge but the assaying of ore content is subject to a fee; free coupons are issued by the Department to be used by prospectors for payment of assays. The laboratories have patented 12 new processes for the extraction and treatment of minerals and, because of the development of such new metallurgical processes, certain minerals once deemed valueless are now of great commercial importance.

To provide for the future development of the mining industry, scholarships are granted to students wishing to follow a career in geology, mining and metallurgical engineering, as well as to students in hydrology or other relevant fields of science (hydro-electricity, hydraulics or meteorology). The Department, in co-operation with universities in Quebec and Montreal, gives yearly courses in prospecting and lectures are given by departmental geologists and engineers at various points in the province.

**Ontario.**—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province. The *Mining Lands Branch* of the Department handles all matters dealing with the recording of mining claims, assessment work, etc., and the preparation of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain offices at strategic locations throughout the province. The *Geological Branch* carries on a continuing program of geological mapping and investigation and prepares, for the use of the public, detailed reports and maps of the areas studied. A program is under way, in co-operation with the Geological Survey of Canada, through which the whole province is to be flown and mapped in a series of airborne magnetometer surveys. In many active areas of the province, resident geologists gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. A geologist specializing in industrial minerals investigates

methods of treatment and recovery of such minerals and compiles data on the uses, specifications and markets for such products. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

The work done by the *Laboratory Branch* includes wet analyses and assays of metal and rock constituents on a custom fee basis, as well as mineralogical analyses and physical testing. The same service is given free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The *Temiskaming Testing Laboratories*, situated at Cobalt, operate a bulk sampling plant mainly to assist the producers of the area in marketing their silver-cobalt ores; they also perform fire assays and chemical analyses. The *Inspection Branch* administers the operating rules of the Mining Act which call for the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch and all hoisting ropes in use at mines are periodically tested by a Branch-operated cable-testing laboratory.

Since 1951 the Department has been engaged in a road-building program to give access to mineralized areas and open them for full development. In 1955 this became an interdepartmental project with other interested departments participating through an interdepartmental committee of Ministers which decides on priorities and locations. Actual construction is carried out by the Department of Highways. The federal-provincial Roads to Resources Program was inaugurated in Ontario in 1959; under the terms of agreement, the federal and provincial governments share equally in the cost of constructing roads to otherwise inaccessible areas (see also the Transportation Chapter, Part III, Section 2).

The *Public Relations Office* of the Department carries out a regular publicity and information program and maintains a library of films on mining subjects which are available for free loan to the public. Each year, displays pertaining to mining are prepared and presented at the Canadian National Exhibition and elsewhere in the province.

**Manitoba.**—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences. Manitoba also aids the mining industry by assisting in the construction of access roads to mining districts.

To encourage the exploration for minerals in Manitoba, the Mineral Exploration Assistance Act was passed in April 1966. This Act provides for the payment of grants to individuals to assist in defraying the cost of exploration within designated areas. If assisted exploration results in the discovery of a deposit, the grant is repayable from the profits of the mine; a grant for exploration that proves unsuccessful is not repayable.

**Saskatchewan.**—Assistance to the mining industry in Saskatchewan is administered by the Department of Mineral Resources. The *Mineral Lands Branch* of the Department is responsible for administering the Precambrian Assistance Program. This Program

designed to stimulate development and utilization of the mineralized areas of northern Saskatchewan, offers to industry a 50-p.c. rebate of approved exploration expenditures on a specified area or property to a maximum of \$50,000 a year for each individual or company and a maximum of \$150,000 on any one area or property. This Branch is also responsible for making disposition of all Crown minerals and maintains records respecting areas let out by lease, permit or claim. Recording offices, located at Regina, La Ronge, Uranium City and Creighton, assist the public in determining the lands available and accept applications.

Officers of the *Engineering Branch*, under the authority of the Mines Regulation Act, make regular examinations of all mines to ensure proper conditions for the health and safety of the men employed. Safety education, particularly in the form of first aid and mine rescue instruction, is also a part of the work of this Branch. All Branch officers are stationed at the Regina headquarters.

The Precambrian Geology Division of the *Geological Sciences Branch* conducts geological surveys in the shield areas of the province and publishes maps and reports for the information and guidance of the industry. Resident geologists are maintained at Uranium City and La Ronge and at the latter centre a laboratory provides for the storage and examination of core and samples. The Division processes exploration data and assessment work to be made available for inspection by the industry.

**Alberta.**—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the upgrading and cleaning of coal, and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture. (See also pp. 403-404.)

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

**British Columbia.**—The Department of Mines and Petroleum Resources of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grub-stakes, limited to a maximum of \$700, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

### Section 3.—Mining Legislation

**Federal Mining Laws and Regulations.**—As of Jan. 1, 1966, the mineral rights vested in the Crown in right of Canada are those situated in the Yukon Territory and the Northwest Territories, those in the islands in Hudson Bay and under Hudson Bay and Hudson Strait, and those under Canada's continental shelves. There are also some small and usually isolated parcels scattered throughout the provinces. The Department of Energy, Mines and Resources is responsible for the disposition of mineral rights and for the administration and enforcement of regulations relating to minerals in Canada's offshore areas, other than those under Arctic coastal waters, in Hudson Bay, the islands in Hudson Bay, Hudson Strait and the small parcels above mentioned. The Department of Indian Affairs and Northern Development is similarly responsible in the Yukon Territory, the Northwest Territories and the offshore rights under Arctic coastal waters; this Department also acts as adviser to Indian bands in Indian reserves and is responsible for the administration and enforcement of the relevant regulations.

Mineral rights of Indian reserves in the provinces are also vested in the Crown in the right of Canada and are administered by the Indian Affairs Branch of the Department of Indian Affairs and Northern Development. The minerals on an Indian reserve may be developed under the Indian Oil and Gas Regulations or the Indian Mining Regulations for the benefit of the Band of Indians having rights to the reserve, only after the Band has given approval by referendum. Indian Band Councils are encouraged to take a share of responsibility in the management of their mineral resources.

Mining exploration is carried out in the Yukon Territory in accordance with the provisions of the Yukon Quartz Mining Act and the Yukon Placer Mining Act; in the Northwest Territories, including Arctic coastal waters, operations are governed by the Canada Mining Regulations 1961 as amended. There are also the Territorial Dredging Regulations, Territorial Coal Regulations and Territorial Quarrying Regulations common to both territories. In the Yukon Territory, mining rights may be acquired by staking claims under the appropriate Acts or Regulations; 21-year leases may be obtained on claims and such leases are renewable.

Under the Canada Mining Regulations, a prospector's licence is required. Staked claims must be converted to lease or relinquished within ten years. In certain areas, a system of exploration by permit over large areas is allowed. Any individual over 18 years of age or any joint stock company incorporated or licensed to do business in Canada may hold a prospector's licence. No lease will be granted to an individual unless the Minister of the Department involved is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease; no lease will be granted to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange and that Canadians will have the opportunity of participating in the financing and ownership of the corporation. Any new mine beginning production after the Canada Mining Regulations came into force in 1961 will not be required to pay royalties for a period of 36 months, starting from the day the mine comes into production. Production date is established as the date determined under the provisions of the Income Tax Act.

An exploration assistance fund for petroleum and other minerals in the Yukon and Northwest Territories was established by the Federal Government in 1966. Initially limited to \$3,000,000 per year, the fund may provide 40 p.c. of the cost of approved exploration programs. Assistance is available only to Canadian citizens or companies incorporated in Canada. Named the Northern Mineral Exploration Program, it is designed to encourage investment from additional Canadian sources previously not attracted to investment in northern exploration operations.

**Oil and Gas Legislation.**—The Canada Oil and Gas Land Regulations and the Canada Oil and Gas Drilling and Production Regulations, issued pursuant to the Territorial Lands

Act and the Public Lands Grants Act regulate the disposition of oil and gas rights and regulate exploration and development in the Yukon Territory, the Northwest Territories and the offshore areas of the continental shelves, but not under lands within any provinces. Only subsurface rights and those beneath the seabed are granted. When required, surface rights are separately negotiated. Oil and gas exploratory permits are issued for nine, 10 or 12 years according to locality and oil and gas leases with a tenure of 21 years may be acquired from exploratory permits. Leases, which are renewable if oil or gas is still able to be produced, must conform to prescribed land patterns but must not exceed 50 p.c. of the area of an exploratory permit area. Under certain conditions, a permittee may obtain a lease on the other half of the permit area or part of it by paying enhanced royalty which varies according to the location of the permit area.

An oil and gas exploratory permit may be issued to any individual over 21 years of age or to any joint-stock company incorporated or licensed to do business in Canada, or incorporated in any province of Canada. No oil and gas lease granted to a permittee will be issued to an individual unless the Minister of the Department involved is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease, or to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneficially owned by persons who are Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange, and that Canadians will have an opportunity of participating in the financing and ownership of the corporation.

**Provincial Mining Laws and Regulations.\***—In general, all Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves, National Parks and other lands which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments. The exception is Quebec where all mineral lands except those granted to individuals in the townships prior to 1880 are administered by the province; also mining rights on federal lands in Quebec are administered by the province.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia no mineral rights belong to the owner of the land except those pertaining to gypsum, limestone and building materials, and the Governor in Council may declare deposits of either limestone or building materials to be minerals. Such declaration is to be based on economic value or to serve the public interest. In such case, the initial privilege of acquiring the declared minerals lies with the owner of the surface rights who must then conform with the requirements of the Mines Act. In Newfoundland, mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

**Placer.**—In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

**General Minerals.**—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia, the most elaborate laws and regulations apply in this division. In all provinces except Alberta and Saskatchewan, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others; a claim of promising ground of a

\* Compiled from material supplied by the provincial governments.

specified size may then be staked. In Manitoba and British Columbia a licence is required only for staking and in British Columbia any number of dispositions may be staked under one licence. A claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years except in Quebec where a development licence may be renewed on a yearly basis; also in Saskatchewan there is no work commitment in the first year of the claim. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent two fifths, must be performed and recorded before a lease may be obtained. In Quebec, a specified number of man-hours of work must be performed and the excess may be carried forward for renewal of licence. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Saskatchewan, subsurface mineral regulations covering non-metallies stipulate the size and type of dispositions that may be made in order to maintain the disposition in good standing, provide for fees, rentals and royalties, and set out generally the rights and obligations of the disposition holder.

*Fuels.*—In provinces where coal occurs, the size of holdings is laid down together with the conditions of work and rental under which they may be held. In Quebec, the search for and development of petroleum and natural gas may be carried out under a prospecting permit or working lease; the former covers a period of five years and an acreage of not over 60,000 acres, and the latter a period of 20 years and an acreage not over half the acreage of the prospecting permit. In Nova Scotia, mining rights to certain minerals, including petroleum, occurring under differing conditions may be held by different licensees. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required; however, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba, Saskatchewan and Alberta, exploration costs are applicable in part on the first year's lease rental and in British Columbia on two years' lease rental. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

*Quarrying.*—Regulations under this heading define the size of holdings and the terms of lease or grant. In Nova Scotia, sand deposits of a quality suitable for uses other than building purposes and limestone deposits of metallurgical grade belong to the Crown; gypsum quarries belong to the owner of the property. On Quebec public lands and on those granted to individuals after Jan. 1, 1966, the stone, sand and gravel, like other building materials, belong to the Crown; quarries located on land granted to individuals prior to 1966 remain in the possession of the owners of the surface; the right to exploit all building materials except sand and gravel may be acquired by ordinary staking-out and the right to work sand and gravel beds is set by regulation. In Saskatchewan, sand and gravel on the surface and all sand and gravel obtainable by stripping off the overburden or other surface operation belong to the owner of the surface of the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the surface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

## Section 4.—Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, salaries and wages paid and net value added by processing.

The figures for 'net value added by processing' of industries given in Table 33 are the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate returns to the different industries, or the 'business done' by these industries. These industry series of data are not comparable to the commodity series shown in Table 4, p. 539 where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process.

Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used. The smelting and refining industry is classified as manufacturing and the data relative to that industry are included in the primary metal industry (see Chapter XVI on Manufactures).

### 33.—Principal Statistics of the Mineral Industry, by Province and by Industry, 1963

Province or Territory and Industry	Plants or Estab- lishments	Em- ployees	Salaries and Wages	Cost of Process Supplies, Fuel, Electricity, Freight and Smelter Charges	Net Value Added by Processing

### Section 5.—World Production of Certain Metallic Minerals and Fuels

Table 34 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1964. These figures are taken from the *United Nations Statistical Yearbook 1965* which presents production figures for a much more extensive list of mining and quarrying industries. The 1964 figures are provisional and have been converted from kilograms to ounces troy for gold, from metric tons to ounces troy for silver, and from metric tons to short tons for the other metals and fuels shown.

#### 34.—World Production of Certain Metallic Minerals and Fuels, 1964

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook* either because there was no production or because the quantity was not available.

Salmon became an important commercial product on the Canadian West Coast in the early 1880s and is still supreme among the nation's fishery products. Commercial fishermen alone catch between 16,000,000 and 22,000,000 salmon each year as they migrate to over 1,300 rivers and streams along the jagged coastline of British Columbia. This is a self-perpetuating resource of tremendous potential—wisely managed, it can produce wealth for the country forever.

## PART I.—FISHERIES\*

### Section 1.—The Development of Canada's Sea Fisheries

The vast prolific fishing grounds off Canada's Atlantic Coast have been of great economic value since the early days of settlement of the North American Continent. The heaviest landings by Canadian fishermen today are taken from these waters which first attracted Europeans in the late fifteenth century. Codfish so plentiful they could be lifted out of the ocean by the basketful were reported by navigator John Cabot when he returned from his 1497 voyage in quest of new lands for Henry VII of England. In those days, salt cod was something of a luxury food in England, its value being reckoned as high as 50 shillings a hundredweight as compared with four shillings and eightpence for meat. Markets for dried cod were also assured in the warm countries of the Mediterranean where there was a scarcity of storable protein foods and, as a consequence, it was profitable to send fishing vessels 2,000 miles over the sea to harvest the rich cod stocks off Newfoundland.

From the beginning, competition was keen among fleets of England, France, Spain and Portugal but the English eventually succeeded in dominating the fisheries, particularly in inshore areas. French operations were diverted to the offshore banks and the more remote areas of the Gulf of St. Lawrence, while Spain and Portugal were gradually eliminated from the fishery as a result of aggressive activity by the English.

Valuable fishery bases were first established by settlers in New England, and Nova Scotia assumed importance as a base of fishing operations after the movement of population from New England in the mid-eighteenth century. However, efforts to establish shore settlements in Newfoundland as operating bases were discouraged by English interests and expeditions of fishing fleets from that country continued until settlement in the island was finally sanctioned in the early nineteenth century and a resident population began to make its influence felt in the industry.

\* Sections 1, 2 and Subsection 1 of Section 3 were prepared by the Information and Consumer Service, Department of Fisheries, Ottawa.

Access to shore facilities in British North America for bait and other supplies and for curing the catch was a long contentious subject for the countries engaged in the west Atlantic fisheries, particularly between Britain on the one hand, and France and the United States on the other. The Treaty of Versailles (1783) granted St. Pierre and Miquelon to France and took away some but not all of the French fishing rights off the Newfoundland coast. French operations expanded on offshore grounds in the mid-1800s as a result of subsidization and the development of the trawl-line or bultow, but Newfoundland countered this competition by restricting, through legislation, the sale of bait to foreign fishermen. Thus, the fishing rights of the French on parts of the Newfoundland coast continued to present problems until they were purchased by Britain early in the present century.

The Versailles treaty also imposed restrictions on the United States fishing operations based in New England, and the Convention of 1818 restricted American rights in the territorial waters of the British colonies to those of "shelter and of repairing damages, of purchasing wood and obtaining water and to no other purpose whatsoever". Numerous clashes resulted from these restrictions, instigated by trading interests in Nova Scotia as a check on smuggling. However, conflict over American fishing rights was eased by the Reciprocity Treaty (1854-66) and the Treaty of Washington (1873-85). Under a *modus vivendi* negotiated in 1888, American fishermen, on payment of a licence fee, were permitted to use Canadian and Newfoundland harbours for the purchase of supplies, transshipment of catches and shipping of crews, an arrangement that continued until 1918; a treaty which was intended to replace that "temporary" arrangement was never concluded. Meanwhile, the principal source of conflict with the United States had disappeared with the decline of the New England salted fish industry. In Canada and Newfoundland, however, salted and dried fish—principally cod, with herring and mackerel of equal importance in certain districts—remained the staple product of the industry until the 1940s. Production of dried salted cod in the Atlantic Coast fisheries was at its peak in the 1880s, and began its decline with the disappearance of wooden shipping and the weakening of markets in the West Indies and other southern countries followed by increasing competition from other food products and the appearance of outlets for fresh fish.

Temporary revival was enjoyed by the dried salted codfish industry during the First World War, but in the immediately following years, producers in the Atlantic region, especially Newfoundland, were forced to seek new markets as European fleets had resumed production. Newfoundland fish was diverted to the West Indies, where competition with Nova Scotia, the traditional supplier, forced fish prices down by 50 p.c. between 1926 and 1939, with disastrous results for fishermen of both provinces. Another period of revival came during the Second World War but by 1945 the frozen fish industry began its upward climb and the dried cod trade declined just as steadily.

Development of commercial fisheries on the Pacific Coast was of much more recent origin than that of the Atlantic industry. Settlement had to come first and exploitation of fisheries resources on a commercial scale developed only in the mid-1800s. Growth of the industry was rapid and extensive as a result of the application of technological and transportation advances. Completion of the transcontinental railway to British Columbia in 1885 opened up populous Eastern Canada markets to fresh and frozen Pacific salmon and halibut. By the turn of the century, an active halibut fishery had developed and expanded to offshore grounds. The bait requirements of the halibut fishery in turn enabled the herring fishery to develop on a considerable scale.

The progress of the Canadian fishing industry through the past century may be said to have been characterized by a shift in the principal methods of preserving and storing fish and shellfish, emphasis changing from curing to canning, chilling and freezing. Canning of fish was first introduced in Canada about 1840, when factories were built in Maritime centres for the canning of salmon and lobster. Lobster canning took on increasing importance in the 1870s and expanded at a phenomenal rate, the number of canneries rising from 44 in 1873 to a peak of 917 in 1900. Later, competition and economic

conditions brought about a gradual reduction, accelerated more recently by the use of aircraft to transport live lobster to markets in Central Canada, the United States and Europe. Today, only about 50 canneries remain, but canned lobster, which includes heat-processed and fresh and frozen meat, is still the most valuable canned product produced in the Atlantic Provinces, although an important industry is centred in New Brunswick where young herring are canned and marketed as sardines.

The canning of salmon in British Columbia began about 1870, pioneered in part by individuals and firms with experience gained in lobster canning on the Atlantic Coast. These canneries, established at the mouths of rivers and inlets where salmon was caught, increased rapidly in number and output; by 1917 there were 94 in operation with an annual output exceeding 1,500,000 cases. However, salmon canning quickly developed into a streamlined operation featuring a high degree of mechanization and therefore a reduced labour force. This led to amalgamation of canning firms and the growth of large business organizations, so that today there are only about 20 canneries in production.

The development of filleting and quick-freezing techniques and improvement in transportation facilities gave strong impetus to the frozen fish industry in the inter-war period but scarcity of capital and restrictions on trawling operations hampered its growth. Some progress was made, notably in Nova Scotia, which succeeded in expanding sales of chilled groundfish fillets, live lobster and some other items. Processing and fishing bases were concentrated at the larger ports such as Halifax and Lunenburg. Concentration of operations in larger ports was also a distinguishing feature of the British Columbia industry in this period, but the process of mechanization and business integration out-paced the Atlantic Coast fisheries; a progressive approach and the amalgamation of plant and business organization provided the large-scale capital investment required. Unionization became another important factor in the British Columbia industry during the Second World War.

In the postwar period the Atlantic industry began extensive programs to expand productive capacity. Aided by the relaxation of government restrictions on the use of trawlers, fishery firms invested in the construction or purchase of larger vessels to replace the old-style dory or banking schooners used in offshore fishing. Freezing plants were built to process the increasing quantities of groundfish sold fresh by trawlers and inshore fishermen. Increased government subsidization, both federal and provincial, aided the construction of many new trawlers at Canadian shipyards. After Newfoundland became a province of Canada in 1949, the shift from salted codfish to fresh and frozen fish production in that province was speeded up by an inflow of public works improvements, financial aid to the industry and to fishermen, and expanded development and research projects. Other measures of assistance to the industry, involving cost-sharing on such projects between the federal and provincial governments, have been inaugurated under terms of the federal Fisheries Development Act passed in 1966 (see p. 608).

## Section 2.—Commercial Fishing and Marketing, 1965

Records for landed weight and value, exports and returns to fishermen were established in 1965. Canada's commercial fisheries, an industry that helped to shape the early development of civilization in North America, continue to be a valuable source of food and other products for the domestic and export markets, and provide a hardy but rewarding livelihood for many Canadians. The economic and sociological impact of the industry is, of course, most significant in the coastal and lake regions where some 80,000 fishermen participate in actual fishing, a number that has changed little in the past decade. The number of persons employed in fish processing plants has also shown little fluctuation, totalling about 15,000.

Founded upon cod, herring, salmon and lobsters—products in heavy demand in North American and European markets—the Canadian fishing industry in the mid-1960s is reaping the benefits of advancing technology and increased investment in catching and

processing equipment. In 1965, the market value of all fisheries production surpassed \$300,000,000 for the first time and, with shipments valued at a record \$213,000,000, Canada ranked second only to Japan among world fish exporters. Total landings of 2,400,000,000 lb. of all species of marine life, the heaviest ever recorded, grossed an estimated \$153,000,000 to the fishermen. These records were accomplished despite stiffening competition from other nations fishing on the same grounds and using even more powerful and more heavily mechanized vessels. There is, however, in progress in Canada a program of vessel construction and mechanization which should soon eliminate this disadvantage to Canadian fishermen.

In general, the year 1965 was a good one for commercial fishermen. In terms of both quantity and value, the increase over 1964 was about 3 p.c., although this increase was not enjoyed by all segments of the industry. In British Columbia, landings were lower than in 1964 but on the Atlantic Coast results were very good. No significant changes were noted in the freshwater fisheries.

The salmon fishery in British Columbia yielded only 86,000,000 lb., one of the lowest catches on record, and the canned salmon pack amounted to 913,000 cases compared with 1,255,000 in the previous year. The one bright spot in the salmon fishery was the troll fishery for coho. Halibut landings were slightly lower than in 1964 but prices to fishermen averaged a record 34 cents a pound and the landed value of \$12,600,000 was the highest ever reported. Herring catches for the year were down by 12 p.c. from 1964 but increased returns to fishermen boosted the landed value slightly higher than in the earlier year. A strike of herring fishermen for a month and a half at the start of the winter season contributed to the lower production. Fishing for groundfish, other than halibut, continued to expand in 1965; landings totalled 39,000,000 lb., an increase of 30 p.c. over the previous year.

On the Atlantic Coast, total landings reached 1,650,000,000 lb., valued to fishermen at \$94,000,000; this was an increase in production of 150,000,000 lb. and in value of \$10,000,000. Redfish, flounder and herring were the species showing a significant increase in volume and these species, together with scallops and lobsters, accounted for most of the increase in value. Landings and landed values in each province of the Atlantic region were higher than in 1964, although certain groups of fishermen, notably the inshore fishermen of some areas of Newfoundland and lobster fishermen along the Northumberland Strait, suffered declines in catch and income. In Newfoundland, considerably lower landings of inshore cod and lobster were more than offset by higher catches of flounder, redfish, turbot and herring. In Nova Scotia, landings were up 14 p.c., mainly because of higher catches of cod, redfish, herring and scallops; landed value rose by 18 p.c. Most of the increase in catch in New Brunswick was due to higher landings of herring. Prince Edward Island and Quebec were the only provinces reporting larger lobster catches than in 1964; total landings increased by 15 p.c. and 8 p.c., respectively, and value by 30 p.c. in each province.

For several years the output of Canada's primary fishing industry has been remarkably stable and has not moved, in any recent year, very far from 1,000,000 tons. Within each year a decline in the landings of one species, or one group of species, has been generally offset by an increase in the catch of others, leaving the total output unaffected. In addition, of course, many important species are subject to management control, which minimizes the variations in quantities caught each year. The requirements of the markets, however, have been growing slowly but steadily, especially in North America. About 10,000,000 people have been added to the population of this Continent in the past five years. During this period, per capita yearly consumption of fishery products has been about 12 lb., so that the additional 10,000,000 people created a demand for about 120,000,000 lb. of processed fish, or 250,000,000 lb. of raw material in the form of fish and shellfish. This interaction of a relatively inexpandable supply and expanding demand has resulted in a steadily rising price level for fishery products; in 1965 the value of exports of all fishery products was \$213,000,000, in 1964 it was \$202,000,000 and in 1961, \$143,000,000. Thus, in five years the value of such exports increased by almost 50 p.c.

The United States continues to be the most important market for Canada's fishery products, sales to that country in 1965 accounting for about 70 p.c. of the total value of such exports. This high percentage is partly accounted for by the fact that a substantial proportion of the exports to the United States are high-priced products such as lobsters in shell and lobster meat, scallops, swordfish, whitefish, lake trout and salmon. Virtually all of Canada's exports of fresh and frozen products from the Atlantic and inland provinces and a substantial share of those from British Columbia are sold in that country.

Exports to European countries in recent years have amounted to about one fifth to one third of the value of exports to the United States. Because of the gradual decline in the volume of salted fish exported to the traditional markets of Spain, Portugal and Italy, the products of the British Columbia industry have dominated the market. In 1965, exports of Canadian fishery products to Europe were valued at \$39,400,000, of which \$22,800,000 came from British Columbia. Sales of canned salmon have recently accounted for upwards of 50 p.c. of all fishery exports to Europe; the peak was reached in 1964 when canned salmon made up 55 p.c. of the total of \$46,000,000. The low salmon catch in 1965 affected the exports of the canned product for that year, the total value being only \$18,600,000, of which \$10,800,000 worth went to Britain.

The Caribbean area is a market for low-priced species prepared in inexpensive forms to meet the requirements of population having relatively low purchasing power. Traditional products are salted codfish, pickled mackerel and alewives and bloaters. Exports to this area in 1965 had a value of \$17,400,000 and showed little change in either value or product components from earlier years, although interruptions to commercial relationships occasioned by political disturbances occurred in some markets during the year.

### Section 3.—Fishery Statistics

The review of commercial fishing and marketing given in the preceding Section covers the situation in 1965 and contains estimated figures for that year. However, at the time of the preparation of this Chapter, the latest statistics available in detail for both the primary production and fish products were those for 1964 contained in the following Subsections.

#### Subsection 1.—Primary Production

The value of the 1964 catch of fish on the Atlantic Coast was at a very high level; it amounted to \$87,455,000, an increase of 15 p.c. over the 1963 value of \$76,174,000 and 26 p.c. over the five-year 1960-64 average of \$69,228,000. The lobster catch was somewhat lighter in 1964 than in the previous year but was still the most valuable at \$24,244,000; cod was second at \$22,055,000.

For the third consecutive year, the value of the catch by Newfoundland fishermen was substantially higher than that of the previous year. The value of landings of all species amounted to \$21,978,000, of which cod accounted for \$13,691,000. Cod landings at 369,601,000 lb. were lighter than in 1963, as were those of redfish and haddock.

The value of fish and shellfish landings by Nova Scotia fishermen in 1964 was \$40,977,000, a record level 17 p.c. above 1963. Lobsters and scallops continued to be the most important species from the standpoint of income to the fishermen, having a landed value of \$11,996,000 and \$7,025,000, respectively. Haddock was third at \$5,394,000, followed by cod, swordfish, flounder and sole, pollock and halibut. New Brunswick fishermen also landed a more valuable catch in 1964 than in 1963, although the increase was not as spectacular. Lobsters, herring and cod were the major sources of income to the fishermen, accounting for \$7,438,000 of the total value of \$10,277,000. The herring catch, which fluctuates widely from year to year, was 150,792,000 lb. in 1964 compared with the five-year 1960-64 average of 116,660,000 lb. Returns to Prince Edward Island fishermen in 1964 were \$5,642,000, 26 p.c. above the 1963 level. Lobsters, at

\$4,212,000, made up 75 p.c. of the total and oysters, at \$370,000, were next in importance. The value of Quebec landings in 1964 was little changed from 1963; a decrease in the value of cod taken was more than offset by an increase for redfish.

The value of British Columbia landings in 1964 was \$48,301,000, 19 p.c. higher than in 1963 but below the 1962 level. With salmon making up over half the total, the annual fluctuations in the volume of salmon species taken materially affect the total value of the catch. Landings of all species of salmon in 1964 amounted to 124,198,000 lb. compared with 119,324,000 lb. in the previous season. Chum, spring, coho and sockeye were all up. Herring landings on the other hand were 12 p.c. lower and had a value of \$6,167,000. Halibut landings were also lower but higher unit values resulted in an increase in value from \$8,249,000 to \$8,309,000. The 1964 catch of tuna at 249,000 lb. was well below the record catch of 487,000 lb. in 1962.

### 1.—Quantity and Value of Sea and Inland Fish Landed, by Province, 1960-64

NOTE.—Figures for the years 1918-59 are given in the corresponding table of previous Year Books beginning with the 1947 edition.

## Subsection 2.—Fish Products

According to commodity surveys conducted by the Dominion Bureau of Statistics, the value of sea and inland fish products produced at all industrial levels, including the value to fishermen, amounted to \$293,460,000 in 1964; this was an increase of 12.7 p.c. over 1963 and the highest amount on record. Most of the increase over 1963 took place in the Atlantic Provinces.

## 4.—Value of All Products of the Fisheries, by Province, 1960-64

NOTE.—Figures for the years 1917-59 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition. Totals for five-year intervals from 1870 are given in the 1956 edition, p. 597.

Province or Territory	1960	1961	1962	1963 <sup>2</sup>	1964

<sup>1</sup> Includes value of livers and liver products.

<sup>2</sup> Includes landings by Canadian fishermen in United States ports.

The annual output of canned salmon fluctuates considerably with the extent of the catch, as is shown in Table 6. This product has long been the most important of the industry, but the demand for Atlantic Coast frozen groundfish fillets and blocks has been rising so rapidly that the value of these products now runs a close second. In fact, in 1960 and 1963, years of low canned salmon production, the value of the Atlantic products was in first place.

**Section 4.—Governments and the Fisheries**

Under the British North America Act, the Federal Government has full legislative jurisdiction for the coastal and inland fisheries of Canada. The Federal Parliament therefore enacts all laws for the protection, conservation and development of the fisheries and responsibility for the administration and enforcement of these laws is vested in the federal Department of Fisheries. In some provinces, however, this administration has been delegated, by arrangement, to provincial agencies.

Specifically, the federal Department of Fisheries administers all tidal or sea fisheries except those of the Province of Quebec, and also the freshwater or non-tidal fisheries of the four Atlantic Provinces, the Yukon Territory and the Northwest Territories. The Provinces of Ontario, Manitoba, Alberta and Saskatchewan administer their own freshwater fisheries and in British Columbia the provincial government controls freshwater species but the Federal Government is responsible for marine and anadromous species. Administration of the fisheries of National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Indian Affairs and Northern Development.

**Federal-Provincial Relations.**—The mutual interest of federal and provincial governments in fisheries problems is recognized in the undertaking of joint studies and programs, frequently on a regional basis. Regional committees established in recent years have brought together representatives of all governments concerned for periodic discussion. Four groups have evolved: the Federal-Provincial Atlantic Fisheries Committee consisting of representatives of the Federal Government and of the Governments of New Brunswick, Newfoundland, Nova Scotia, Prince Edward Island and Quebec; the Federal-Provincial Committee for Ontario Fisheries; the Federal-Provincial Prairie Fisheries Committee comprising representatives of the Federal Government and of the Governments of Alberta, Manitoba and Saskatchewan; and the Federal-Provincial British Columbia Fisheries Committee.

Members of the Committees are the Deputy Minister of Fisheries of Canada and the Deputy Ministers of provincial departments responsible for fisheries. Sub-committees make recommendations for industrial development, research and marketing problems. The main committee in each case co-ordinates, where practicable, all activities in the respective fields of responsibility of its members and suggests to the respective governments means of carrying out fisheries programs and projects of common concern. These include the development of methods and techniques in the catching of fish and of shore and plant facilities, and studies of the economics of fisheries to ensure that any proposed program of development is soundly based.

Co-operation between the federal Department of Fisheries and the provinces has taken the form of cost-sharing arrangements on joint projects. Legislation enacted in 1966 grants to the federal Department of Fisheries further powers to enter into such agreements for purposes of modernizing, mechanizing and diversifying the nation's fisheries. The Fisheries Development Act (SC 1966, c. 18), approved by the House of Commons on Apr. 25, 1966 and given Royal Assent on May 12, 1966, served to streamline the operations of the Department by incorporating several of the development activities undertaken under earlier legislation. It empowers the Minister of Fisheries to undertake projects "(a) for the more efficient exploitation of fishery resources and for the exploration for and development of new fishery resources and new fisheries; (b) for the introduction and demonstration to fishermen of new types of fishing vessels and fishing equipment and of new fishing techniques; and (c) for the development of new fishery products and for the improvement of the handling, processing and distribution of fishery products." The Act authorizes the Minister to enter into cost-sharing agreements with provinces, with private companies and with individuals or co-operatives. Financial assistance may be given for the construction and equipment, or modification, of commercial cold storages and mechanically refrigerated bait-freezing facilities to be used for the preservation of fishery products, and for the construction and equipment of fishing vessels. The Act also authorizes the conduct of economic studies in conjunction with universities or other educational institutions and provides for the establishment of advisory committees to assist in the implementation of fisheries development programs.

### Subsection 1.—The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:—

- (1) The federal Department of Fisheries with headquarters at Ottawa, Ont., and regional offices under Regional Directors at Vancouver, B.C., Winnipeg, Man., Quebec, Que., Halifax, N.S., and St. John's, Nfld.
- (2) The Fisheries Research Board of Canada with headquarters at Ottawa and biological, technological and oceanographic stations across Canada.
- (3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of each of these agencies is given in this Subsection.

**The Department of Fisheries.**—Canada's federal fisheries service began with Confederation in 1867 but it functioned as a branch of other departments until 1930, when legislation was enacted to establish a separate Department of Fisheries. The chief responsibilities of the Department are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the maximum utilization of the fishery resources; and to develop a proper public understanding of the resources and the industry. Services rendered by the Department have been revised and broadened with the times; increased attention has been paid in recent years to the development aspects of the fisheries. About 2,000 persons are employed by the Department, most of them in conservation, inspection, protection and administration duties in fishing areas across the country. The Ottawa headquarters staff numbers about 200.

A Departmental reorganization, initiated in 1965, brought about certain structural changes, including the division of the former Conservation and Development Service into two separate Services—the Conservation and Protection Service, concerned mainly with administration of programs for protection of fish stocks and enforcement of regulations under the Fisheries Act and other legislation, and the Resource Development Service, responsible for developing programs to preserve and extend fish stocks through the application of scientific and technical knowledge. The importance of Canada's participation in international commissions and agreements respecting fisheries was reflected in the designation of an Assistant Deputy Minister to assume responsibility for international and jurisdictional affairs, and the creation of an International Fisheries Service. Another Assistant Deputy Minister is responsible for all services engaged in the day-to-day activities of the Department.

The Industrial Development Service, established in 1955, carries out a wide range of development programs to aid fishermen and the fishing industry. Projects undertaken either on its own or jointly with provincial agencies are designed to test and demonstrate technological innovations for improvement of catching, processing or distribution of fish and of fishery products. The Economics Service has two Branches—the Economics Intelligence and Research Branch provides the Government and the commercial fishing industry with current information under the general heading of trade intelligence, and the Planning and Policy Analysis Branch carries out studies and investigations in the primary fisheries and in the processing and distribution of fish products. The Inspection Service is responsible for the inspection of fish and fish products to ensure the maintenance of quality standards and controls. Field officers are regularly stationed at major fish-processing centres and 17 permanent or mobile fish inspection laboratories are operated in Atlantic, inland and Pacific fishing areas. A Special Programs Service, established in 1965, administers programs for economic aid to fishermen and the fishing industry, including the Fishermen's Indemnity Plan, the Newfoundland Bait Service and the Salt Assistance Plan. Periodic requests are received for assistance to compensate for storm damage to fishing gear and in 1965 special assistance was provided to inshore fishermen affected by poor returns.

The Information and Consumer Service is responsible for informing the fishing industry, fishermen and the general public on activities of the Department through the distribution across the country of printed material, films and filmstrips, and radio and television material. The Consumer Branch of the Service operates test kitchens in major population centres and carries out demonstrations, lectures and publicity programs to promote the consumption of fishery products.

*International Fisheries Conservation.*—Cognizant of the problems of conservation in fisheries exploited on the high seas, Canada has long been a leading proponent of and participant in international conferences, conventions and treaties with other countries involved in fisheries. The federal Department of Fisheries assumes a major responsibility for the negotiation, revision and implementation of international fisheries treaties on behalf of the Government of Canada. Canada is now a party to seven international fisheries conventions:—

- (1) the Convention between Canada and the United States for the preservation of the halibut fishery of the northern Pacific Ocean and Bering Sea;
- (2) the Convention between Canada and the United States for the protection, preservation and extension of the sockeye and pink salmon fisheries in the Fraser River system;
- (3) the International Convention for the High Seas Fisheries of the North Pacific Ocean between Canada, Japan and the United States;
- (4) the Interim Convention on Conservation of North Pacific Fur Seals between Canada, Japan, the Soviet Union and the United States;
- (5) the International Convention for the Northwest Atlantic Fisheries;
- (6) the Convention on Great Lakes Fisheries between Canada and the United States; and
- (7) the International Convention for the Regulation of Whaling.

The federal Department of Fisheries is represented on each of these Commissions by one of its senior officers.

The first international agreement contracted by Canada as an independent nation was a treaty negotiated with the United States in 1923 for the protection of halibut stocks of the Pacific Ocean. An international commission established under that treaty was given broader regulatory powers in subsequent conventions, most recently in 1953 when its name was changed to the International Pacific Halibut Commission.

The International Pacific Salmon Fisheries Commission has achieved much success toward rehabilitation of depleted salmon stocks in the Fraser River of British Columbia. Discussions were held in 1965 and 1966 between representatives of Canada and the United States to consider revision of the 1956 protocol which brought pink salmon of the convention area within the scope of the Commission's activities. Negotiations also took place during the same period in an endeavour to reach agreement on problems arising from the intermingling of salmon bound for rivers of northern British Columbia and southeastern Alaska.

Protection of the high seas fisheries of the North Pacific Ocean is the objective of the International North Pacific Fisheries Commission established under a convention ratified in 1953 by Canada, Japan and the United States. The Commission conducts co-ordinated scientific research programs and recommends conservation measures to be undertaken by the contracting parties.

Fur seal stocks of the North Pacific and its adjacent seas are protected by the Interim Convention on Conservation of North Pacific Fur Seals which was ratified in 1957 by Canada, Japan, the Soviet Union and the United States, and amended by a protocol in 1964. This convention was preceded by an international treaty signed in 1911 which prohibited the killing of fur seals at sea—a measure which, aided by careful management programs, made possible the restoration of depleted seal herds. At the present time under the terms of the convention, Canada and Japan each receives annually 15 p.c. of the seal skins taken on the United States-controlled Pribilof Islands, and 1,500 skins from the harvest of the Commander and Robben Islands which are under control of the Soviet Union.

The International Commission for the Northwest Atlantic Fisheries conducts studies and makes recommendations for measures to conserve and develop the fish stocks off Canada's East Coast. The convention under which the Commission was established was signed in 1949 and has since been ratified by 13 nations: Britain, Canada, Denmark, the Federal Republic of Germany, France, Iceland, Italy, Norway, Poland, Portugal, Spain, the Soviet Union and the United States.

A Canadian proposal to bring the conservation of harp and hood seals of the Northwest Atlantic under the ICNAF Convention received endorsement by the last of the 13 member nations in April 1966, thus making it possible to initiate an international conservation program.

A draft international convention for the conservation of tuna and tuna-like fishes of the Atlantic Ocean was discussed at a 17-nation conference in Rio de Janeiro, Brazil, in May 1966. Canada was represented at the conference which considered proposals for establishment of an international commission to study tuna stocks and to recommend maximum catch levels for the various species.

Canada is a member of the International Whaling Commission and is obligated to submit statistical data on whales caught by Canadian vessels and to conduct scientific studies on whale stocks of special interest to Canada.

Another international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predatory lamprey in these waters. This convention came into force in 1955.

While co-operating with other nations to conserve high seas fisheries resources through international agreement, Canada acted in 1964 to protect inshore fisheries by establishing a 12-mile exclusive fishing zone on all coasts. The Territorial Sea and Fishing Zones Act proclaimed in that year has since been enforced against all countries except those having traditional fishing rights. Negotiations have been conducted with these latter countries with regard to the application of the fishing zone and to the location of the baselines from which the fishing zone is measured.

**The Fisheries Research Board of Canada.**—The Fisheries Research Board is a research organization established by Act of Parliament (RSC 1952, c. 121) for the purpose of conducting basic and applied research on Canada's living aquatic resources, their environment and their utilization. Its antecedents go back to 1898 and it is thus the lineal descendant of one of the oldest scientific organizations in Canada and one of the oldest government-supported research organizations under the supervision of an independent scientific board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries. The Board proper consists of a permanent chairman, who is appointed by the Governor in Council and who is a member of the Public Service of Canada, and "not more than eighteen other members" holding honorary appointments from the Minister of Fisheries for five-year terms; the Act requires that "a majority of the members of the Board, not including the chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department [of Fisheries] and the fishing industry". The scientific members are drawn principally from universities and research foundations across Canada, to include specialists in disciplines related to the Board's work. The industry members are selected from among Canada's leading business men with an intimate knowledge of fishing and the fishing industry and the Department of Fisheries representative is usually a senior staff member in Ottawa. Board members have both advisory and executive functions. The advisory functions are delegated in the first instance to regional Advisory Committees who conduct on-the-spot regional reviews and report to the Board on the operations and scientific programs with a view to their improvement. The executive functions are delegated to an Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small administrative, supervisory and publications staff in Ottawa. The responsibilities of the Ottawa office include administration of a grant program to encourage university research in the fields of marine and aquatic science. The Board employs approximately 900 persons, of whom about 250 are scientists.

*Biology.*—The biological program of the Board is designed to add to fundamental knowledge concerning Canada's vast living marine and freshwater resources. Included here are life history, population and behaviour studies leading to a sound scientific basis for the conservation and management of the commercially important fisheries including those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other well-known economically important aquatic species of animals, such as salmon, cod, herring and halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also included are studies in fish and shellfish diseases, fish enemies including the ill effects of water pollution, and such basic studies as fish genetics, physiology and behaviour, the latter with a view to improving fish cultural and farming methods and also to improving fish farm and hatchery stocks. Besides these basic studies, new fishing grounds and new species for exploitation are sought and experiments in improving fishing methods are undertaken.

The biological work on the Atlantic Coast is conducted out of research stations located in St. Andrews, N.B., and St. John's, Nfld.; work on arctic fisheries and on sea mammals is directed from a laboratory situated in Ste. Anne de Bellevue, Que.; freshwater work is carried out from a station in Winnipeg, Man.; and work on the Pacific Coast is directed from research laboratories situated in Nanaimo, B.C. The Board operates 18 research vessels for its biological studies, varying from small inshore and lake craft to specially built seagoing ships. The Board acts as Canada's research agent for three international fisheries commissions and two international sea-mammal commissions to which Canada is party.

*Oceanography.*—Oceanography includes the study of the marine (and freshwater) environment in which aquatic organisms live. This is under continuing study to further knowledge in primary and secondary productivity and the occurrence of ocean and freshwater life of importance to man. Encompassed here also are investigations into the distribution and physical and chemical characteristics of major ocean currents and the physical and biological structure of large ocean areas including the ocean bottom where concentrations of fish and other aquatic life occur. Ocean climate and ocean weather as they affect the distribution of fish and other living organisms as well as the vertical and horizontal distribution of nutrient matter and the cycle of energy and life in the seas are regularly observed and correlated. These studies, as well as special studies of interest to the Royal Canadian Navy, the Department of Transport and the international fishery commissions, are carried out by the Board's two oceanographic groups operating from Dartmouth, N.S., and Nanaimo, B.C., with strong ship support from the Navy and the Department of Transport, and co-operation from the Department of Energy, Mines and Resources.

*Technology.*—Investigations are conducted toward improving methods of preserving processing, storing and distributing fish products, as well as of utilizing all parts of the fish. These include developments in refrigeration and the use of antibiotics as fish preservatives, of improved refrigerated rail cars for fish distribution, improvements in canning, smoking and salting of fish as well as the development of new products such as protein concentrates (fish flour) and new uses such as the development of wieners for the utilization of abundant species that are not now used for food. Fundamental studies of the structure and composition of fish proteins, fish oils, fish hormones, the energy expenditure of migrating salmon and the nutrition of marine bacteria are under way.

Technological investigations on the Atlantic Coast are carried out at research laboratories situated in Halifax, N.S., and Grande Rivière, Que., and applied work for New

foundland is carried out at a Technological Unit in St. John's. For inland areas technological work is centred at Winnipeg, Man., and a research laboratory in Vancouver, B.C., undertakes investigation of Pacific Coast problems.

**The Fisheries Prices Support Board.**—The Fisheries Prices Support Board, established in 1947, is responsible for investigating and, where appropriate, recommending government action to support prices of fishery products where declines are experienced. The basic principle of the legislation is to protect fishermen against sharp declines in prices and consequent loss of income. The Board is responsible to the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from the fishing industry in the various fishing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices other than its purchase policy nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of \$25,000,000 annually on recommendation of the federal Treasury Board and authorization of the Governor in Council.

In 1965, because of market disruption resulting from political disturbances in the Dominican Republic, the Board purchased up to \$300,000 worth of salted hake, pollock and cusk from exporters in Nova Scotia, New Brunswick and Prince Edward Island, up to \$190,000 worth of salted cod from Newfoundland and up to \$10,000 worth of salted cod from Quebec. The salted hake, pollock and cusk was donated to the Dominican Republic and part of the salted cod went to Kenya and Guyana under the World Food Program; the remainder of the cod was disposed of because of deterioration.

The Board co-operates with the Economics Service of the Department of Fisheries in the collection and analysis of costs of fishing operations and, in co-operation with the Department of Trade and Commerce, maintains a continuous review of the markets for various fishery products. A small staff is maintained for administrative activities at headquarters of the Board in Ottawa.

### Subsection 2.—The Provincial Governments\*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

**Newfoundland.**—The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with the improvement and development of fishing and production methods. It conducts experiments and demonstrations in longlining, Danish seining and otter trawling, in the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of \$160 a ton for newly constructed vessels under the Fishing Ships (Bounties) Act, 1955. The Fishing and Coasting Vessels Rebuilding and Repairs (Bounties) Act, 1958 authorizes the government to assist financially in maintaining and prolonging the life of the existing fleet. The Coasting Vessels (Bounties) Act, 1959 authorizes the granting, for locally built ships, of a maximum bounty of \$300 a ton for vessels measuring from 15 to less than 100 gross tons,

\* Prepared by the respective provincial departments responsible for fisheries administration.

and \$150 a ton for vessels of between 100 and 400 gross tons. An Inshore Fisheries Assistance Programme provides a maximum bounty of \$10 a foot on boats measuring from 24 to 35 feet and bounties are paid to fishermen on certain types of nylon and other synthetic fibre fishing nets and lines.

Other services include: advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics; assistance to fishermen's unions; weather and ice reports; and search and rescue. The Fisheries Salt Act, 1957 provides for rigid control over the use of fisheries salt.

*Sport Fisheries.*—The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds actually remain under the authority of the Natural Resources Branch of the provincial Department of Mines, Agriculture and Resources but, under federal-provincial agreement, these waters, including rivers and streams, are under federal control in matters of conservation and guardianship.

**Prince Edward Island.**—The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity and is concerned mainly with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at an interest rate of 4 p.c. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act, the Prince Edward Island Industrial Corporation or the Industrial Enterprises Limited, under which loans may be made for facilities handling fishery products.

*Sport Fisheries.*—Game fisheries are the responsibility of the Department of Fisheries. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. Unfortunately, many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

**Nova Scotia.**—Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration related thereto, the Nova Scotia Government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Nova Scotia Department of Fisheries. The Fishermen's Loan Board is administered by that Department and the Industrial Loan Board by the Nova Scotia Department of Trade and Industry; the first makes loans to fishermen for the purchase of boats and engines and the second makes loans for the construction or improvement of fish processing plants. Fisheries engineers perform inspection and survey duties for the Loan Boards and provide technical assistance and advice to loan applicants and others in the fisheries

and allied industries, notably the boatbuilding industry. Instructors conduct courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of gear. This program receives substantial assistance from the Technical and Vocational Training Branch of the federal Department of Manpower and Immigration. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Nova Scotia Department of Fisheries, with the financial and/or technical assistance of the federal Department of Fisheries, organizes and conducts explorations of fishing grounds for new resources and the adaptability of new, improved gear and methods.

*Sport Fisheries.*—In recent years, Nova Scotia, through the Wildlife Division of its Department of Lands and Forests, has spent a considerable amount of money on management and research in certain lakes and streams in the province with a view to aiding the Atlantic salmon and trout fishery. A continuing program of lake and stream investigations was begun in 1961 in order to obtain information useful in the formulation of a fish management program for the future. A system of rearing ponds, capable of producing 200,000 yearling speckled trout annually, has been established on the Medway River in Queens County and the Moser River in Halifax County. Several projects dealing with reclamation, farm ponds, rainbow trout and smallmouth bass are also being conducted. Full-time fisheries biologists are employed by the Division.

**New Brunswick.**—Commercial fishing is one of the most important basic industries of New Brunswick, employing about 5,800 fishermen with annual earnings of \$11,000,000, and 2,500 plant workers. The annual marketed value of fish products is about \$35,000,000, of which 90 p.c. is exported to the United States. New Brunswick's commercial fisheries, both tidal and inland, are under the legislative jurisdiction of the federal Department of Fisheries; angling in Crown waters is the responsibility of the provincial Department of Natural Resources.

The New Brunswick Department of Fisheries, established in 1963, has three Branches—General Administration, Boatbuilding and Maintenance, and Exploratory Fishing and Education; the Fishermen's Loan Board of New Brunswick, created in 1946, is under the jurisdiction of the Minister of Fisheries.

The General Administration Branch is responsible for personnel, accounting, field staff and administration of the New Brunswick Fish Inspection Act and Regulations; it operates three regional offices covering the three main fishing areas of the province.

The functions of the Boatbuilding and Maintenance Branch, which is staffed with marine engineers, boat inspectors and a naval architect, include the study, modification and approval of plans and specifications of fishing vessels to be financed by the Fishermen's Loan Board; the inspection of the 100 to 125 vessels of various types and sizes being built every year in the province's 15 shipyards; and the training of fishermen in the proper methods of maintaining hulls and machinery. Continuous efforts are made by the Branch to improve construction standards of inshore fishing vessels. Boats of sturdier construction and equipped with more powerful propulsion engines are enabling inshore fishermen to diversify their operations from the traditional lobster fishery. New designs are being introduced in the fleet of 128 large offshore and 3,200 small inshore fishing vessels which make up the present fishing fleet, the trend being toward larger and more automated vessels. Combination types capable of dragging for groundfish and purse seining for pelagic species are becoming more popular among the younger well-trained fishermen. The 92-foot class built in 1963 in a New Brunswick shipyard has been very successful at stern dragging for haddock and purse seining for herring, sardines and tuna. A West Coast-designed 79-foot combination trawler-seiner of hard chine construction has been added recently and a 100-foot unit of similar design is under construction. Three additional 65-foot units of wooden construction were commissioned in

1966 for fishermen of Campobello Island and northern New Brunswick. The 87-foot wooden side trawler, ten of which are in operation, has also proved very successful, particularly in the Gulf of St. Lawrence area.

The Exploratory Fishing and Education Branch continues the experimental and exploratory fishing and fish processing projects that have been carried on for many years in co-operation with the federal Department of Fisheries. Results of this extensive experimental work and research studies include the establishment of crab fisheries on the east and north coasts of the province; the establishment of a tuna fishery in the Bay of Fundy, on the shores of which a \$1,500,000 canning plant is under construction; and the introduction of Scottish and Danish seining techniques. In the search for unexploited species of fish and shellfish, in addition to cancer crabs and tunas, commercial quantities of spider crabs and shrimps were located in the deep waters of the Gulf of St. Lawrence. During 1966-67, eleven fisheries development projects were undertaken on a shared-cost basis with the federal Department of Fisheries. Among those showing the most promising results was the offshore exploration of herring in the Gulf of St. Lawrence; a West Coast seiner, chartered by the New Brunswick Department of Fisheries, caught as many as 153 tons of large fat herring in one set at the entrance to the Bay of Chaleur. The Branch operates a modern school of fisheries at Caraquet where, in 1966-67, 110 fishermen took training in the various phases of their trade. The regular program of the school includes navigation, rules of the road, motor mechanics, electronic devices, fishing gear technology, business administration, marine biology, oceanography (restricted), radio-telephone, metal and wood working, arithmetic and languages (upgrading) and other related subjects. Arrangements are being made to extend the regular course from five to nine months of the year and to conduct extension courses.

The Fishermen's Loan Board of New Brunswick is a body corporate operating under the jurisdiction of the Minister of Fisheries. Since its inception in 1946 it has granted over 1,400 loans to New Brunswick fishermen for a total of \$15,000,000; total outstanding loans stood at \$6,300,000 in 1966. Loans are repayable within five years on small inshore boats but repayment schedules on large trawlers may extend to 15 years, based on the gross proceeds of the catch. Most of the new fishing vessels being built in the province are financed by the Board, which also acts as agent for the financial assistance program granted by the federal Department of Fisheries to owners of new fishing vessels.

*Sport Fisheries.*—Sport fishing contributes substantially to the economy of the province, mainly through the tourist trade. Great Atlantic salmon rivers like the Miramichi, the Restigouche and the St. John are known around the world for their prolific production of this majestic game fish and attract many thousands of tourists to the province each year. Anglers catch as many as 50,000 salmon a year in the Miramichi system alone. Many other species are also sought after by both residents and non-residents in the hundreds of streams, rivers and lakes of the province.

*Quebec.*—The Quebec Department of Industry and Commerce administers the commercial fisheries of the province. For the benefit of producers and fishermen, it operates a network of 61 cold storage plants for the freezing and preservation of fish and the supplying of frozen bait and ice; the plants have a total daily freezing capacity of 500 tons and a storage capacity of 25,000,000 lb. The Department also owns and maintains about 110 stations in small fishing ports where fish is kept under proper conditions while awaiting collection by truck or boat, and an artificial drying plant with a processing capacity of 3,000,000 lb. of fish annually. A staff of fish wardens, technicians and technologists administers fishery legislation and assists in the application of new techniques for the expansion of the industry. The central administration is located in Quebec City with offices at the principal fishing centres. Fish inspection is carried out by federal inspectors who are given additional powers by the provincial government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of fish preparation and of producing high-quality products. A Fisheries Training School, operated by the Department of Education at Grande Rivière, gives free theoretical and practical courses in fishery to fishermen of all ages. The Co-operative Associations of Fishermen receives encouragement through the Social Economic Service of Ste. Anne de la Pocatière subsidized by the Federal Government. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. Fish consumption is promoted through advertising campaigns in newspapers and magazines, exhibits at fairs, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets.

The Department adheres to the federal-provincial agreement on the building of draggers and longliners and assumes the building costs on a capital refunding plan. As at Mar. 31, 1965, the fishing fleet consisted of two 129-foot steel draggers, 12 82-foot steel draggers, 84 wooden draggers, 49 longliners and one boat equipped for clam dragging. The cost of construction of fishing boats since 1952 has been about \$13,000,000 and loans to fishermen have exceeded \$8,000,000.

Biological and hydrographical research is conducted in the Gulf of St. Lawrence, directed by the Marine Biological Station at Grande Rivière, and studies of the biology of freshwater fish of the St. Lawrence River and its tributaries are undertaken at a laboratory located in Quebec City. An aquarium in Quebec City exhibits freshwater and saltwater fish in 60 large tanks.

*Sport Fisheries.*—The Department of Tourism, Fish and Game has jurisdiction over sport fishing in inland waters; it employs 250 full-time wardens. Licences are required for sport fishing and hunting. Four hatcheries are maintained at strategic points throughout the province for the distribution in public waters of speckled trout, brown trout, rainbow trout and grey trout, splake, ouananiche, maskinonge and salmon.

Excellent fishing may be found in all provincial parks and reserves, except Mont Orford Park. Gaspesian and Laurentide Parks are renowned for their trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Five salmon streams are open to anglers—the St. Jean River, the Petite Cascapédia River, the Matane River, the Port Daniel River and the Matapédia River. A joint committee composed of departmental officials and the directors of the federation of fish and game associations recommends the proper legislation for the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

**Ontario.**—The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests, under the authority of the federal Fisheries Act, the Fishery Regulations for the Province of Ontario, the Ontario Game and Fish Act and the Regulations connected therewith.

*Commercial Fisheries.*—The commercial fishing industry in Ontario provides employment for about 3,000 persons directly and for many more indirectly, and produces an annual yield of from 45,000,000 lb. to 55,000,000 lb. of fish. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie. The principal species of fish taken commercially are perch, smelt, whitefish, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and bullheads, sturgeon, eels, goldeyes, rock bass, sunfish and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-foot tugs, and types of gear vary from gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-

operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling has proved very efficient in harvesting smelt on a year-round basis in Lake Erie.

Most Ontario fishermen are organized into various local associations. Many of these associations are, in turn, represented by the Ontario Council of Commercial Fisheries which performs important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

*Sport Fisheries.*—Angling in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some 68,490 sq. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as brook, rainbow, lake and brown trout, walleye, smallmouth and largemouth bass, pike and maskinonge. It is difficult to measure the total value of the sport fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of \$2,500,000. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forest districts of the province.

*Provincial Hatcheries.*—Ontario operates 17 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of various species of game fish. The primary species reared in these operations include brook trout, rainbow trout, lake trout, smallmouth and largemouth bass, and maskinonge. Four of the finest trout-rearing stations on the Continent are located in this province—at Dorion near Port Arthur, Sault Ste. Marie, Hill Lake near Englehart, and Chatsworth.

*Fisheries Research.*—Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sport fisheries on the respective lakes. In Algonquin Park, detailed studies concerning lake trout, smallmouth bass and brook trout are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies are also being conducted on walleye, parasitology and limnology. A selective breeding experiment concerning the hybrid between lake trout and brook trout is progressing; the deep-swimming character of the lake trout and the character of maturity at early age of the brook trout are those being selected for combination in the hybrid. Co-operation by Ontario in the field of sea lamprey control is being extended through the Great Lakes Fishery Commission.

*Manitoba.*—Commercial fishing has been carried on in Manitoba since 1880. The province has almost 40,000 sq. miles of freshwater and 400 miles of coastline on Hudson Bay but, altogether, about 300 lakes and rivers, covering 30,000 sq. miles, are commercially fished. Some 3,500 persons are employed in primary commercial fishing and an equal number derive part of their living from fish processing and the supply of materials and services to the industry. The industry is particularly important to people living in remote northern communities where fishing provides a major part of their cash income but, even

so, over two thirds of the catch is taken in the southern part of the province. In 1964-65, Lake Winnipeg produced 9,706,200 lb., Lake Manitoba 5,196,800 lb., Lake Winnipegosis 3,562,200 lb., and other southern lakes 387,500 lb. The northern lakes produced 9,780,000 lb. The total value to the fishermen in 1964-65 was \$3,719,566 and the value as marketed was \$6,408,116. The average marketed catch for the past five years was 32,600,000 lb., worth \$3,900,000 to the fishermen and \$7,000,000 at the wholesale level after processing. About half the catch is taken during open water and the remainder through the ice in winter.

There are 15 kinds of fish caught commercially in Manitoba but those of highest annual value to the fishermen are pickerel, whitefish, sauger and pike. Over 90 p.c. of the catch is exported, mostly to the United States. A quantity of the less valuable kinds and some processing waste are used as food on mink ranches and for the making of meal; a small industry to process white whales (beluga) for oil and animal food has been established on Hudson Bay. Capital investment in gear, boats, warehouses, etc., approaches \$5,000,000.

Supervision of commercial fishing operations and the enforcement of the Manitoba Fishery Regulations occupy a staff of Conservation Officers who patrol the province using diesel boats during the open water season, snowmobiles and light trucks during the winter and aircraft in remote areas. The Fisheries Branch of the Department of Mines and Natural Resources, in co-operation with the Department of Health, conducts a systematic program of plant inspection to raise the standard of sanitation and improve the processed product.

A continuing program of biological research is conducted by the Fisheries Branch to provide management information in the interest of a sustained annual yield and a program has been established to test and prove new improved netting and gear which will increase production and lower operating costs. Close liaison is maintained with the federal Department of Fisheries and the Fisheries Research Board in the effort to develop new fish products and effect more complete utilization of the province's fishery resources.

Fish culture activities include two pickerel hatcheries (Lake Manitoba and Lake Winnipegosis), a whitefish hatchery (Lake Winnipeg), a trout hatchery (Whiteshell Provincial Park) and two spawn-taking camps. Fish to replenish the commercial fishing waters are raised in the pickerel and whitefish hatcheries and several kinds of trout as well as splake and sockeye salmon are raised in the Whiteshell hatchery to be planted in sport fishing waters.

*Sport Fisheries.*—Angling continues to be one of the most popular and most rapidly growing forms of outdoor recreation in Manitoba, and since ice-fishing has come into vogue many anglers are now fishing over the entire year. About 100,000 licensed fishermen, 15,000 of them from outside the province, spent an estimated \$11,000,000 in pursuit of this sport. Although their catch of about 5,000,000 lb. a year is considerably less than the commercial fishing yield, the monetary value to the province of the sport fisheries is higher. Extensive water areas are reserved for sport fishing only but others are managed for both types of use. Walleye (pickerel), northern pike and the various trout species are the main species taken. Either or both of the first two species occur in nearly every body of water in the province but trout require a more specialized habitat and occur only in select lakes and rivers.

**Saskatchewan.**—Approximately 32,000 sq. miles of water, about one eighth of the province's area, provide the basis for Saskatchewan's fishery resource, a resource that contributes much to the economic and recreational activity of the province. Administration of the fisheries is the responsibility of the Fisheries Branch of the Department of Natural Resources; its head office is located in Prince Albert. The Branch has three

main Divisions—Management, Research and Fish Culture—which are responsible for planning policies; developing programs to ensure the proper management and utilization of the fishery resource; interpreting and explaining policies, programs and regulations; administering the Acts and Regulations (both federal and provincial); and adapting regulations to meet changing conditions. Its objective is to encourage efficient multi-use of the fishery, taking into consideration the interests of the various groups concerned—commercial fishermen, mink ranchers, anglers and the public generally.

The commercial fishery in Saskatchewan averages about 14,500,000 lb. annually and consists mainly of whitefish, lake trout and walleye. In 1964 the total catch of 14,306,000 lb. had a market value of \$3,080,000, of which \$1,490,000 was received by the fishermen. This was a slight increase over the previous year, the result of a better harvest of northern pike and tullibee. Eighteen local fishermen co-operatives, representing 1,350 fishermen, marketed 66 p.c. of the total harvest in 1964.

During the year, 324 free Indian permits and 896 domestic fishing licences were issued, resulting in a catch of about 1,200,000 lb. of fish of all species; the 62 mink ranchers licensed to fish for 9,888 breeders produced an estimated 5,800,000 lb. of rough fish (suckers, burbot and ciscoes).

The Fish Research Division conducts biological surveys on most of the large lakes and on many smaller water bodies and streams in the province to provide information for the development of fisheries management policies and programs. The current program is designed to: determine productivity of water bodies; secure information on abundance and relationship of fish species; investigate ecology and assess factors affecting environment of fish; develop techniques to achieve maximum harvest of fish populations without prejudice to continued production; and develop techniques to facilitate rehabilitation and stocking of small water bodies. Continuing limnological and fisheries surveys are conducted on lakes along the Lac la Ronge highway; along highway 106; on the Saskatchewan River Delta; and on Jackfish, Murray, Green and Turtle Lakes. A long-term creel census is being taken on Lac la Ronge and studies have been conducted to test survival of young northern pike.

Spawn camps are operated in northern Saskatchewan to collect lake trout, whitefish, northern pike, walleye and arctic grayling eggs. These, along with rainbow and eastern brook trout eggs received from the United States and alpine char from France, have been incubated and hatched at the Fish Culture Station at Fort Qu'Appelle. Millions of fry are stocked in many water bodies in the province.

*Sport Fishing.*—Saskatchewan has some of the finest sport fishing waters in Canada, about 100,000 angling licences being issued annually. To meet recreational demands, a study of 84 water bodies was undertaken recently and seven small lakes along the Churchill River road have been rehabilitated. The survival of kokanee (land-locked salmon) in a rehabilitated lake marked the first successful stocking of this species in provincial history. A new Saskatchewan Anglers' Derby record was set in the goldeye division by a 3-lb.2-oz. specimen taken in the Saskatchewan River. Other top prizes went to anglers for a 33-lb. 9-oz. northern pike, a 12-lb. 3-oz. walleye, a 3-lb. 12.5-oz. brook trout, and a 3-lb. 9.5-oz. arctic grayling.

**Alberta.**—Commercial and sport fishing is administered by the Fish and Wildlife Division of the Department of Lands and Forests under the authority of the Fisheries Act (Canada) and the Fishery Act (Alberta). Production of commercial fish for the year ended Mar. 31, 1965 was 12,296,600 lb., with a landed value of \$791,044 and a marketed

value of \$1,243,481. Lake whitefish, the most valuable of commercially caught fish, accounted for 38 p.c. of the total marketed value but represented only 12 p.c. of the total landings. Tullibee, a low-priced fish used primarily for animal food, accounted for 71 p.c. of the total quantity and 43 p.c. of the marketed value. Other species taken in order of marketed value were pickerel (walleye), pike, perch, burbot (ling) and lake trout. Of the total quantity taken, 1,365,664 lb. were marketed outside the province and of that amount 1,272,300 lb. were exported to the United States.

*Sport Fisheries.*—Angling licence sales number about 125,000 each year. The province operated fish culture facilities for stocking angling waters at Calgary and Raven where 1,913,980 trout, grayling and kokanee (land-locked salmon) were produced in 1965. Trout plantings are made in lakes and reservoirs but warm water stockings are limited to the transfer of adult walleye, pike and perch to a few selected lakes for the purpose of introducing these species.

A staff of four district biologists, two assistant biologists and several student employees carried out biological surveys and management projects during 1965. For the first time, surveys were extended to lakes on the Canadian shield in extreme northeastern Alberta, an area offering considerable potential for sport fishing for lake trout. Reclamation of lakes by chemical treatment and habitat destruction problems also received attention.

**British Columbia.**—A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the province, including commercial fishing and authority for regulation of the game fisheries in non-tidal waters, is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. The biological research into those species of shellfish over which the province has control, principally oysters and clams as well as marine plants, is conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

## PART II.—FURS

### Section 1.—The Fur Industry\*

Although the relative importance of the fur industry in the Canadian economy has declined through the years, the production of wild and farm furs continues to contribute substantially to the national income and to individual income in certain areas. In addition to returns from the sale of pelts, the thriving fur farming industry has boosted the economy of many areas through creation of a chain of associated businesses such as feed supply houses and pelt processing stations. Demand from the industry for feed stuffs has resulted in the utilization of much of what was formerly waste from meat packing operations and poultry processing plants. In addition, some 50,000,000 lb. of rough fish and fish frames, formerly of little or no value, are used annually by this industry.

The value of raw furs produced in Canada in the 1964-65 season amounted to \$36,613,350, ranched furs accounting for 58.4 p.c. and wild pelts for the remainder. Canada accounts for about one twelfth of the world production of ranched mink pelts and one quarter of the world production of wild furs. A large proportion of the Canadian fur crop is exported, the principal varieties being mink, beaver, seal, muskrat and fox; in 1965 the value of raw furs exported was \$29,503,777 and during the same year raw furs worth \$19,144,817 were imported.

**Fur Trapping.**—The value of the wild furs caught in 1964-65 was \$15,236,798. In that season Canadian trappers took 4,163,277 pelts of all species, ranging from 564 polar bear skins which realized an average price of \$99.12, to 1,503,756 squirrel pelts averaging \$0.59. An estimated 50,000 Canadians participate annually in fur trapping activities which in recent seasons have yielded an average revenue of approximately \$15,000,000 including the value of the sealskin crop. Returns from the trapping enterprise are distributed through countless northern villages, providing a welcome source of revenue for many part-time trappers as well as for the professionals.

A good proportion of the wild fur catch comes from the central and southern portions of the provinces. Some species have adjusted to life in partly settled areas and each year substantial catches of beaver, muskrat, mink, raccoon, wolf and squirrel are made in areas of mixed farm and bushland. As a result of the failure of raw fur prices to keep pace with rising commodity costs, most of the trappers in these areas operate on a part-time basis only. Many are full-time wage-earners who carry on their trapping activities during weekends or on holidays.

In the northern areas also, the production of most of the important fur varieties is being well maintained. Comparatively few opportunities for wage employment exist in these areas and trapping remains an important source of revenue. Since 1938 no trapping licences have been issued to non-Indians in the Northwest Territories, other than to individuals holding licences at that date and their offspring. Consequently, most of the fur catch in the Northwest Territories is taken by Indian, metis and Eskimo trappers. A trend has developed in recent years whereby native trappers, who formerly spent the winter months along with their families on the trapline, now congregate with their dependants in the settlements. This community-type living has certain undesirable results; the areas around the settlements tend to be over-trapped and the less accessible areas neglected, with consequent waste of the fur resource.

**Fur Farming.**—Mink is by far the most important fur bearer raised on fur farms; chinchilla, fox and nutria are also raised but these account for less than 1 p.c. of the total value of pelts produced.

\* Prepared by A. Stewart, Production and Marketing Branch, Canada Department of Agriculture, Ottawa.

Mink farming, which had its beginnings in Canada around 1910, is now carried on in all provinces, the principal producers, in order of importance, being Ontario, British Columbia, Manitoba and Alberta. The following figures indicate the growth of the industry since 1930:—

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	\$		No.	\$
1930.....	3,284	10.52	1960.....	1,203,853	14.03
1935.....	30,558	10.58	1961.....	1,271,449	14.50
1940.....	229,202	9.64	1962.....	1,295,672	15.13
1945.....	255,968	21.51	1963.....	1,400,021	15.82
1950.....	589,352	17.08	1964.....	1,418,368	14.92
1955.....	786,760	20.07			

Production in 1964 was 1.3 p.c. higher than in the previous year but, because of poorer market conditions, the value was down 4.4 p.c.

The mink breeding season extends from early March to early April. After a gestation period varying from 40 to 70 days, the litter of three to six kits is born. At age five to six months, the mink are fully grown and at this stage receive all possible attention with a view to developing deep, silky pelts which will bring top prices. Pelting starts around mid-November and by the end of that month shipments of raw pelts begin arriving at the fur auction houses. Mink farming has become a specialized business that calls for a high degree of skill, experience and industry. The successful breeder must have a thorough knowledge of his animals' habits and requirements. Mink must be fed a carefully prepared diet, tailored to meet the varying demands of the breeding, growing and furring-out seasons. Also, a sound understanding of the complex field of genetics is required for selective breeding programs through which breeding herds may be improved and new colours produced. Diseases of mink have been the subject of considerable research, as a result of which most mink farmers now carry out programs of preventive vaccination for control of the major diseases.

Advanced ranching practices and the use of labour-saving devices enable the producer to operate very efficiently, permitting a single operator to tend many animals. Mink are usually housed in roofed structures with more or less open sides. These sheds may contain up to several thousand animals each and the regular pattern of the pens within the structure facilitates the use of automatic watering and powered feeding systems. Even so, production costs in the 1960-64 period showed considerable increase and mink pelt prices failed to keep pace. One result of the lower profit margins has been an acceleration of the trend toward large producing units and the decline in the numbers of small operators producing fewer than 100 pelts a year. In 1950 there were 589,352 mink pelts produced on 2,557 farms, an average of 230 pelts per unit; in 1960 there were 1,203,853 mink pelts produced on 2,331 farms, an average of 516 per unit; and by 1964 the number of mink farms had declined to 1,491 but pelt production increased to 1,418,368, an average of 951 per farm.

Chinchillas are being raised successfully in all provinces, the principal producers in 1964, in order of importance, being British Columbia, Ontario, Quebec and Alberta. Most of the Canadian chinchilla pelts are exported in the raw state to the United States where they are dressed before being offered for sale. The pelts are sold through two outlets in New York City and most of the Canadian skins are intersorted with pelts produced in the United States. This arrangement benefits producers in both countries since the resulting larger quantities render it possible for the grading specialists to make up "lots"

containing pelts well matched as to size, colour and quality. The following figures show the production of chinchilla pelts in Canada since 1955:—

<i>Year</i>	<i>Pelt Production</i>	<i>Average Realization</i>	<i>Year</i>	<i>Pelt Production</i>	<i>Average Realization</i>
	<i>No.</i>	<i>\$</i>		<i>No.</i>	<i>\$</i>
1955.....	1,742	27.50	1960.....	9,067	13.06
1956.....	2,705	9.65	1961.....	10,559	14.07
1957.....	4,701	13.84	1962.....	11,193	13.56
1958.....	8,336	13.43	1963.....	12,226	14.03
1959.....	8,558	13.17	1964.....	12,842	13.22

In 1964, 782 fox pelts were produced on 36 Canadian farms, a continuation of the decline that began following the peak production of 240,827 pelts in 1939. It is interesting to note, however, that, sparked by a strong demand from Japan, the 1964 production realized an average price of \$43.37 per pelt, the highest return since 1930.

**Fur Marketing.**—The bulk of the Canadian fur crop is sold in one or other of the eight fur auction houses located in Montreal, North Bay, Winnipeg, Regina, Edmonton and Vancouver. The marketing season extends from December each year through to the following June. By this time most of the current season's production has been moved at the auction level, although clean-up sales in August or September are not unusual.

The December auctions offer substantial quantities of the new season's ranched mink pelts but only limited quantities of wild furs; the latter become available in larger quantities in January and later months. Canadian pelts are traditionally sold in the raw or unprocessed state, thus facilitating entry into the many countries that maintain tariffs on imports of processed furs.

Throughout the 1965-66 selling season, there was a strong American and European demand for all types of Canadian furs, especially from West Germany. In addition to the demand for ranched mink, the dominant fur of the industry, there was a noticeable interest shown in many of the wild fur varieties including the long-haired types which have largely been neglected in recent years. As a result, prices realized at auction for both wild and ranch-raised pelts were higher than in 1964-65.

Most Canadian mink ranchers are members of the Canada Mink Breeders' Association, which promotes Canadian ranch-raised mink in the domestic and foreign markets and works closely with fur auction outlets in formulating plans for marketing the annual pelt crop. Funds for advertising and other expenditures are obtained through a (voluntary) deduction of 1½ p.c. of the sales price of all members' pelts sold at auction. In the 1964-65 season these deductions produced a revenue of approximately \$290,000.

One method of promoting Canadian furs in the overseas market is the annual exhibit of a comprehensive selection of this country's furs at the International Fur Fair, Frankfurt, West Germany. This is the largest and most important exhibition of its type in the world and the annual attendance of around 20,000, mainly members of the European fur industry, includes a good proportion of the overseas purchasing power. An indication of the success of this exhibition, sponsored by the Department of Trade and Commerce, is the recent increase in the number of fur buyers who have come to Canada to obtain their requirements. Mink producers and trappers alike have benefited through the additional competition produced in Canadian auctions by these visitors.

## Section 2.—Fur Statistics

### Subsection 1.—Fur Production and Trade\*

**Total Fur Production.**—Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of

\* Prepared by the Agriculture Division, Dominion Bureau of Statistics.

raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently, annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

<sup>1</sup> Commonly known as Alaska fur seal; not available by province. Value figures are the net returns to the Federal Government for pelts sold. <sup>2</sup> Value figures are payments to sealers for landed pelts, including blubber; an unknown quantity is processed as leather.

**Fur Farm Production.**—Mink now accounts for over 99 p.c. of the total value of fur farm production. In 1964 the number of mink pelts taken continued upward, reaching 1,418,368 with a value of \$21,165,324. The total number of all types of pelts taken was 1,435,803 with a value of \$21,376,685.

On the whole, there was little change in the number of fur farms operating in 1964 compared with 1963, some provinces reporting small increases and others small decreases.

Mink farms increased in number from 1,476 to 1,491 and the number of animals on those farms at year-end from 583,312 to 641,818. Chinchilla farms also increased in number from 451 to 477 and the number of animals increased from 39,656 to 49,298. In 1964, 151 farms raising nutria reported 3,986 animals and 36 farms raising fox had 762 animals; the number of nutria decreased by 2,734 over 1963 and the number of fox increased by 4.

**Exports and Imports.**—The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being by far the most valuable followed by beaver, seal, muskrat, fox, and squirrel. Mink, Persian lamb, dressed seal, fox, muskrat and raccoon make up a large part of the imports. Exports and imports of furs, undressed, dressed and manufactured, to and from Britain, the United States and all countries, are given for the years 1964 and 1965 in Table 6.

## Subsection 2.—The Fur Processing Industry

The rather general term "fur processing" includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

In the 1962 survey, as explained in Chapter XVI on Manufactures, a change was made in the "total activity" approach; Tables 7 and 8 give selected statistics on the new basis for 1962-64. In 1964, the number of skins treated was 4,831,560, of which mink comprised 30 p.c., muskrat 18 p.c., Persian and other types of lamb 13 p.c., raccoon 9 p.c., sheep, shearing and other types of sheep 5 p.c., and all other types of skins 25 p.c.

### Section 3.—Provincial and Territorial Fur Resource Management

Most of the fur resources of the provinces and territories of Canada are under the administration of the respective governments and councils. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Indian Affairs and Northern Development is responsible for all Federal Government interests in wildlife resources except for those related to Indian affairs, which

are administered by the Indian Affairs Branch of the same Department. The Canadian Wildlife Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems (see pp. 49-51). Provincial fur resource management practices are discussed in the following paragraphs.

**Newfoundland.**—For the past several years, the Wildlife Division of the provincial Department of Mines, Agriculture and Resources has been operating experimental beaver traplines on the Avalon and Burin Peninsulas. Legislation has now been prepared to permit the extension of this trapline system to cover all fur bearers throughout the Island of Newfoundland for the 1966-67 and subsequent trapping seasons. In general, trapping regulations provide for fall and winter trapping seasons for muskrat, otter, beaver and mink within the Island of Newfoundland and for beaver, mink, marten, muskrat, otter, fisher and Arctic fox in Labrador. Trapping is permitted throughout the year for fox, lynx, weasel, wolf and wolverine.

Although not directly connected with fur bearer management, interesting findings regarding one fur bearer—the lynx—have been made in Newfoundland. In 1964, during an investigation of caribou calf mortality, it was determined that when a caribou calf was bitten by a lynx, saliva bacteria were transmitted to the wound and the ensuing infection caused death in most cases. To eliminate this cause of death among young caribou, Wildlife Division officers have since carried out extensive lynx trapping in the vicinity of the caribou calving areas, resulting in a higher percentage of calf survival.

**Nova Scotia.**—Nova Scotia's wild fur bearers include beaver, muskrat, mink, otter, fox, raccoon and weasel and the trapping of these animals provides supplementary income for several thousand persons who harvest from \$100,000 to \$200,000 worth of wild furs each year. The value, of course, depends on the numbers of each fur species available and on fur prices, both being subject to marked variations from year to year.

The beaver, once almost extinct in the province, is now the most valuable fur bearer taken. A \$2 licence is required by residents to trap a limited number of beavers (five to ten) during the approximately six-week season beginning Nov. 1. No licence is required to trap other fur bearers, although a royalty must be paid to the province for each pelt exported. These animals may be taken between Nov. 1 and Dec. 14.

Beaver research is at present being carried on in Nova Scotia to increase knowledge of this valuable animal as a preparation for better management of its population. Behaviour, feeding, movement and reproduction studies are being conducted near the Tobieatic Sanctuary in western Nova Scotia, in Cumberland County in the eastern part of the province and in an enclosed area in Queens County. In addition, data on size, age, parasites and diseases are collected from beaver carcasses taken by trappers in all parts of the province.

Several trappers' associations have been started throughout the province so that the men closest to the fur resource may have some say in its wise use and management. These groups can also assist in ensuring proper handling and marketing of the raw furs and in up-grading quality, thus commanding good market prices.

**New Brunswick.**—The initial investigation under the fur management program under way in New Brunswick concerned the muskrat and was conducted in the estuary of the St. John River, one of the better muskrat areas in the province. Such investigation will soon be extended to other fur bearers, especially beaver. Beaver were protected against trapping for about 20 years until the first open season was declared in 1946. As a result, the beaver has made a remarkable recovery and there has been an open season each year since 1951, the annual take averaging about 7,500 pelts. At present, beaver damage done to farms and woodlots, highways and railways is causing some concern.

The trapping of fisher and marten was permitted during the 1964-65 trapping season for the first time since 1946. These animals are found mainly in the northern part of the province but their numbers appear to be increasing and they are gradually working their

way southward. During the late winter of 1966, a number of fisher were live-trapped in northern New Brunswick and released in the Fundy Mountains in an attempt to re-establish them there. Mink and otter are not abundant but in the fall trapping season the catches average from 1,500 to 2,000 and from 200 to 250, respectively. In 1964-65, 3,320 trapping licences were issued.

Provincial legislation enables quick changes to be made in trapping seasons; thus, the autumn benefit of available fur may be utilized by a trapper or a closed season established on any fur bearer showing signs of serious depletion in numbers. A summary of trapping laws, which includes information on how the different pelts should be handled to receive the best price, is available from the Fish and Wildlife Branch of the provincial Department of Lands and Mines.

**Quebec.**—The fur trade has been of considerable importance in Quebec since the beginning of New France and the province has remained in the forefront of fur producers. The principal native species, in order of importance, are beaver, mink, muskrat, hair-seal, otter, lynx and marten.

Management of wild fur bearers began in 1932 with the establishment by an official of the Hudson's Bay Company of a privately leased reserve at Rupert House. The administration of this reserve passed to the Hudson's Bay Company and a second concession, at Nottoway, was granted to the Company in 1938. Strict conservation practices were enforced in these two reserves with such success that the provincial government took over their management and has since added steadily to the area of Crown lands set aside for Indian trappers. At present, 12 reserves are under conservation: Rupert House, 7,500 sq. miles (1932); Nottoway, 11,300 sq. miles (1938); Vieux Comptoir, 30,000 sq. miles (1941); Peribonca, 12,600 sq. miles (1941); Fort George, 17,700 sq. miles (1942); Abitibi, 6,000 sq. miles (1943); Great Victoria Lake, 6,300 sq. miles (1948); Mistassini, 50,000 sq. miles (1948); Manouane, 5,000 sq. miles (1951); Roberval, 20,000 sq. miles (1951); Bersimis, 21,000 sq. miles (1951); and Saguenay, 140,000 sq. miles (1955). The number of beaver pelts alone taken from these reserves in the year ended Mar. 31, 1965 was 16,065, having a value of \$212,201.

In 1945, a separate system of registered lands for white trappers was set up in the areas of Abitibi East, Abitibi West, Rouyn-Noranda, Témiscamingue, Pontiac and part of Saguenay County. Each leaseholder is granted exclusive trapping rights on his assigned land and each is subject to strict regulation. The trapping of fur bearers, other than beaver, is not restricted on either the reserves or the registered lands except for a general regulation concerning the protection of animals and the fixing of catch limits. Recently, biological research has been undertaken to assess the results of this system.

In 1964-65, the value of the catch of wild furs in Quebec amounted to \$2,569,471—a fraction of the value of the finished product.

**Ontario.**—Legislation for the management of wild fur bearers had its beginning in Ontario with the setting of seasons in 1860 by an Act of Upper Canada. However, 32 years passed before there was any field staff to enforce the regulations and then began an era of restrictive legislation to protect species threatened by the earlier exploitation. Progress beyond the restrictive enforcement of open and closed seasons has come about only in the past 20 or 30 years. The first steps in this direction involved the setting aside of special Indian hunting areas in which non-Indians were not allowed to trap.

The registered trapline system was introduced in 1935 on a very small scale. This system is based on government recognition of the desirability of full utilization of the resource and the more efficient management that results when one individual enjoys the exclusive right to trap on such an area. In its early stages, surveyed townships were assigned as trapline areas but more explicit trapline boundaries, established in 1947-48, now cover the province and mostly follow natural physiographical features. At the same time, resident traplines were established in areas of patented land, which means most of southern

Ontario; these are blocks of land on which trappers are licensed to trap, providing they make their own written agreements with the landowners. Trapline licences are renewable annually as long as the trapper meets the conditions of the regulations and continues to trap. Trappers may sell the equipment and improvements they have made on their lines and so have a vested interest in their traplines.

In full realization that fur is a natural resource that cannot in nature be stockpiled, and is harvested on a commercial basis only, the Ontario Department of Lands and Forests has assisted the Ontario Trappers' Association to establish their fur auction at North Bay. This allows the trappers to sell furs on a competitive market and realize their full value.

Much valuable research has been carried out on fur bearers, with present emphasis on beaver and otter. Transplantings have been successfully carried out to speed the recovery of reduced populations, particularly with beaver. A new aging technique was perfected for beaver in 1964 and an aerial beaver survey technique was developed recently.

**Manitoba.**—Trading in furs is Manitoba's oldest industry and the province produces some of the finest pelts on the world markets. The annual value of production varies widely, depending both on the cyclic abundance of fur bearing animals and on world prices for the pelts produced.

As the northern portion of Manitoba became more accessible following construction of the Hudson Bay Railway to Churchill, competition for fur and for trapping grounds became so severe that the fur resources were sadly depleted. In 1940, Manitoba started a program of trapline registration. The program provided security of tenure to individuals or community groups of trappers, weeded out the part-time trappers and changed harvesting of wild fur from fur mining to wild fur farming. At that time beaver were a rarity and a series of closed seasons had been declared. Since then, beaver have increased steadily and 41,869 pelts were harvested in the 1964-65 season. Within the past decade new records in the production of muskrat, beaver, mink, lynx, fisher and otter have been set for this century.

The wild fur industry is still of economic importance in the province, and particularly so for northern residents, both white and native. A program of trapper education, inaugurated in 1957 and designed to improve the general handling of furs by trappers and at the same time achieve a certain measure of standardization in pelt care, has shown gratifying results. It has been expanded to include improved trapping methods and the use of humane trap sets; a booklet, *The Trapper's Guide*, is available from the Wildlife Branch of the Department of Mines and Natural Resources.

Manitoba has been working in close co-operation with federal and other provincial agencies in the promotion of quality furs by contributing a collection of representative wild furs for exhibit at the more important European fairs.

**Saskatchewan.**—Before the introduction of Saskatchewan's fur conservation and development program, little was done to control the trapping of beaver and muskrat. During open seasons, trappers took every pelt available and then the season had to be closed the following year in hope of natural population build-up. This "feast and famine" policy had a disastrous effect on both the fur resources and the livelihood of trappers. Few trappers had exclusive rights to specific areas and most of them were unable to establish permanent homes in communities. Poaching was common practice and there was little economic security. Beaver began declining steadily after World War I and this affected the habitat for other fur bearers as well.

In 1944, the Saskatchewan Government set up a committee to study trapping problems and the following year the South Saskatchewan Muskrat Trapping Program was instituted. Under this plan, individuals received exclusive rights to trap on definite land locations. Owners and occupants received first consideration, with special priority given to Indians and metis on Crown lands. Muskrat quotas were established to assure continuing populations, and marketing of pelts under government supervision was instituted.

In 1946, under federal-provincial agreement, all Crown lands north of the 53rd parallel were set up as the Northern Fur Conservation Block. Up to \$50,000 a year was to be expended over the following ten years to establish and administer conservation areas, purchase equipment, pay salaries of personnel, transplant live beaver and build dams; the Federal Government agreed to assume 60 p.c. of the cost and the province the remainder. A Fur Advisory Committee, with representation from the provincial Department of Natural Resources and the federal Indian Affairs Branch was set up to supervise the program. Organization of conservation areas was left to the trappers. Five-man councils were elected in all districts, with Indian, metis and white trappers sharing privileges, obligations and responsibilities on an equal basis. Conservation measures and licensing regulations were initiated. In 1956 the agreement was extended for another ten years with minor changes and in 1962 a co-ordinating body was set up by the Fur Advisory Committee to promote better communications and understanding of the fur program. The second federal-provincial agreement terminates in 1966 and negotiations are under way for the drafting of a new agreement which will provide, in addition to an extended fur program, a greatly enlarged plan covering the development of other natural resources, such as fish, forest development on Indian reservations, harvesting of wild rice and other natural crops, etc.

Under the present fur program, security of trappers has been strengthened; fur bearer population, although still fluctuating to some extent, has through management reached a higher general level, particularly of beaver which is the most important fur animal, rivalled only by wild mink; quotas have put trapping on a sustained-yield basis; poaching has been almost eliminated; higher water levels resulting from the comeback of beaver have improved the habitat for other wildlife; and Indian and non-Indian trappers are sharing alike in the self-government of trapping areas and in fur management programs.

**Alberta.**—During 1965-66, plans have been formulated for the reorganization of the Fish and Wildlife Division of the provincial Department of Lands and Forests. Under the new set-up, a fur management section will be established to work strictly on the fur resources of the province. More meetings will be held with registered trappers to increase the exchange of information between them and the Division's officers and a more intensive program is being initiated to eliminate as far as possible the misuse of trapping areas by certain trappers and, by amalgamation, to form trapping areas into better economic units. The Alberta Government submits pelts to the main fur exhibits in Canada and Europe, a policy that has increased the interest of foreign and Canadian buyers in Alberta furs.

**British Columbia.**—The British Columbia wild fur resource is administered by the Fish and Wildlife Branch of the Department of Recreation and Conservation. Regulations are derived under authority of the Wildlife Act and resource use is controlled under the registered trapline system, in effect since 1926. Registered traplines are areas of Crown land allotted, for the purpose of trapping wild fur, to trappers who are resident in the province. Registration of a specific trapline is renewable on an annual basis by the trapper, subject to certain requirements of tenure aimed at conservation and sustained yield of fur species. Approximately 3,000 trappers are involved in provincial wild fur production, of whom one half are Indians.

The market value of wild fur produced during the fur harvest of 1964-65 was \$600,316, with beaver, squirrel, wild mink and lynx together comprising 78 p.c. of this total value. The 1964-65 beaver harvest numbered 21,769 pelts.

Legislative measures entail a general shortening of the annual trapping season to restrict the harvesting of unseasonable pelts. Administrative emphasis is placed on the desirability of increasing the market value of the resource through improved pelt quality. The Branch is a member of the Canadian Fur Council.

## Section 1.—Electric Power Development

### Subsection 1.—Historical and Current Trends in Power Development

Electric power development in Canada has undergone remarkable and sustained growth since the beginning of the century. From a modest 133,000 kilowatts of generating capacity installed at the end of 1900, Canada's installed hydro capacity rose to almost 21,800,000 kw. by the end of 1965, and thermal capacity to 7,600,000 kw.

The chart opposite shows the expansion in installed generating capacity in hydro and thermal stations that has taken place since 1920. Thermal-electric power development in Canada was not well documented early in the century but it is apparent that its growth was slow and of relatively minor importance until the late 1940s. The rate of development of hydro facilities, on the other hand, tended to accelerate after the turn of the century when improvements in electric power transmission techniques were introduced and increasing emphasis began to be placed on the construction of large hydro-electric stations.

During the prosperous 1920s, demand for electricity became heavier and the rate of installation increased appreciably. Then, under the depressed conditions of the early 1930s power demand dropped off but did not show up immediately as a drop in the installation rate because of the time lag inherent in hydro-electric power development. The completion of hydro projects initiated prior to the depression period accounted for the continuation of a high rate of capacity installation up until 1935; thereafter, poor economic conditions in the 1935-39 period resulted in a reduced rate.

In the early war years, the tremendous demand for power to drive Canada's war industries accounted for the sharp rise in installation of new generating facilities between 1940 and 1943 but in the later war years construction dropped off so that, from 1944 to 1947, a second flattening occurred in the growth curve. After the War, industrial expansion and rapidly growing residential and agricultural development placed extremely heavy demands on power generating facilities, to stay abreast of which the addition of new capacity was required at a rate higher than at any time in Canada's history. These demands also led to the start of an extensive program of thermal plant construction in the early 1950s, since they could not be satisfied from hydro sources alone. In the period

\* Sections 1 and 2 of this Chapter were prepared by the Water Resources Branch, Department of Energy, Mines and Resources, Ottawa; Sections 3 and 4 were revised by the Energy Statistics Section, Industry Division, Dominion Bureau of Statistics, and Section 5 by the various provincial Commissions concerned.

# GROWTH IN ELECTRIC POWER GENERATING CAPACITY IN CANADA, 1917-70

Million  
k.w.

\*PROJECTION

1950-65, the average annual rate of installation of both hydro and thermal facilities was about 1,200,000 kw., with hydro contributing two kilowatts of new capacity for each kilowatt contributed by thermal. However, it is interesting to note that the average increase in thermal generating capacity over the period 1960-65 equalled the increase in hydro capacity and promises to surpass it in the not too distant future.

Table 1 shows the present status of installed generating capacity in hydro and thermal stations and the combined total for all stations in Canada as at Jan. 1, 1966.

**Current Trends.**—Although water power traditionally has been and still is the main source of electric energy in Canada, thermal sources some day will undoubtedly become the main supplier. The choice between development of a hydro-electric power site and construction of a thermal generating station must take into account a number of complex considerations, the most important of which are economic in nature. In the case of a hydro-electric project, the heavy capital costs involved in construction are offset by maintenance and operating costs considerably lower than those for a thermal plant. The long life of a hydro plant and the dependability and flexibility of operation in meeting varying loads are added advantages. Also important is the fact that water is a renewable resource. The thermal station, on the other hand, can be located close to the demand area, with a consequent saving in transmission costs. With the current trend to large steam stations, however, a certain amount of the flexibility of location of thermal stations is lost because large steam units require considerable quantities of water for cooling purposes, making it essential that such stations be sited close to an adequate water supply.

The marked trend to thermal development which became apparent in the 1950s can be explained in part by the fact that, by that time, in many parts of Canada most of the hydro-electric sites within economic transmission distance of load centres had been developed and planners had to turn to other sources of electric energy. More recently, however, advances in extra-high-voltage transmission techniques are providing a renewed impetus to the development of hydro power sites previously considered too remote.

Because of the relatively long starting-up time required by large thermal units, thermal stations tend to lack flexibility of operation and can be used most efficiently to meet continuous load conditions. Hydro stations, on the other hand, can put generating units on the line with minimum delay and hence are admirably suited to supply power to meet the peak loads which may occur several times each day. By combining the advantages of both hydro and thermal stations in integrated supply systems, power producers are now achieving much greater flexibility of operation.

Another trend in development designed to meet the problem of varying daily loads is the use of pumped storage. An example is the Sir Adam Beck hydro development at Niagara Falls where water taken from the Niagara River above the Falls is carried by

tunnel and power canal to penstocks which supply the main generating station on the bank of the Niagara River some distance below the Falls. In off-peak hours, power from the main station is used to pump water from the power canal into a reservoir maintained at a higher level; during peak-load hours, the pumps, which are dual-purpose units, operate as generators and are driven by water released from the reservoir. The pumping-generating units at this development make available an extra 176,700 kw. of generating capacity. A pumping-generating station using the same general principle is under construction on the Brazeau River in Alberta as part of the 338,440-kw. Big Bend hydro development.

Perhaps the most promising application of the pumping-generating principle is its use in conjunction with nuclear power stations. Nuclear units, in common with the larger conventional thermal units, can be used most efficiently under conditions of continuous operation. Off-peak nuclear power can be used to operate pump-turbine units and the hydro-electric power derived from operating the units as generators is available for use during periods of peak demand.

### Subsection 2.—Utilization of Power

In 1965, Canada's generating facilities produced a total of 143,160,958,000 kilowatt-hours of electric energy, after allowing for the energy used in the power stations themselves. Of this total, 116,712,297,000 kwh. was produced in hydro-electric stations and 26,448,661,000 kwh. in thermal stations. Energy imported from the United States exceeded by 7,407,000 kwh. the energy exported to the United States during the year, bringing to 143,168,365,000 kwh. the total energy made available. The diagram illustrates how this energy was used.

Industry uses approximately 57 p.c. of the total electric energy made available in Canada; residential and farm use accounts for 20 p.c. and commercial use 14 p.c. The remaining 9 p.c. is listed under "losses and unaccounted for". Because many power producers do not distinguish in their records between residential and farm customers, the amount of energy used is shown as a combined total. A small amount of energy used for street lighting, slightly less than 1 p.c. of the total energy made available, is included in the "commercial" category.

About 20 p.c. of the total energy made available in Canada is used in the mineral industry, including smelting and refining, 18 p.c. by the pulp and paper industry and 19 p.c. by other industries. Of the latter, the chemical industry and the primary iron and steel industry together consume almost one half. Approximately 75 p.c. of the energy consumed by the mineral industry is used in the smelting and refining of metals.

Canada has no known deposits of bauxite but the availability of low-cost hydro-electric power has fostered the establishment of an aluminum industry which produces one quarter of the world's supply of this metal. Further evidence of the value of water power to mining operations is provided by the fact that Canada's asbestos industry, which produces about 40 p.c. of the total world supply of asbestos, obtains the major part of its power supply from hydro-electric sources.

The incidence of large water power resources in those regions in which the more important mineral deposits have been found has greatly facilitated mining development. Recent examples are the nickel mining and refining complex at Thompson, Man., which uses hydro power generated in the Kelsey plant on the Nelson River, and the iron ore mining operations in Labrador, supplied by the Twin Falls plant on the Unknown River.

Metal mining, a very important division of the Canadian mining industry, is carried on mainly in two physiographic regions, the Western Cordillera and the Canadian Shield. In the Western Cordillera, the mountainous topography and the relatively high amounts of precipitation favour the development of water power. In the Canadian Shield, which is a Precambrian formation stretching in a wide sweep around Hudson Bay from the Mackenzie River basin to the eastern tip of Labrador, heavy glaciation in recent geological times has formed river systems which are comparatively young and are characterized by large numbers of lakes connected by short river sections with numerous rapids and falls suitable for the development of hydro-electric power.

Canada's pulp and paper industry is one of the world's great industrial enterprises. Total mill capacity for the production of newsprint paper is considerably greater than that of any other country in the world and in total production of wood pulp, Canada is second only to the United States. The fact that over 90 p.c. of the manufactured newsprint is exported gives some indication of the importance of the industry to the Canadian economy. By far the larger portion of the energy used in the pulp and paper industry is derived from water power.

### Subsection 3.—Water Power Resources, Undeveloped and Developed

Table 2 presents a summary of developed water power in Canada and an estimate of undeveloped water power potential, based on records maintained by the Water Resources Branch of the Department of Energy, Mines and Resources. Estimates of available power are shown for undeveloped sites only; for developed sites, the total generating capacity actually installed is indicated. It should be noted that the capacity installed at an existing hydro-electric development is frequently in excess of the continuous power available at the site. The relationship between installation and available power is explained on p. 639.

#### 2.—Water Power Resources, by Province, as at Jan. 1, 1966

Province or Territory	Undeveloped Water Power			Developed Water Power
	Available Continuous Power at 88 p.c. Efficiency			Installed Generating Capacity

<sup>1</sup> Power equivalent of flow available 95 p.c. of the time of the time.

<sup>2</sup> Power equivalent of flow available 50 p.c. of the time.

<sup>3</sup> Power equivalent of arithmetical mean flow.

**Undeveloped Water Power Resources.**—Table 2 gives estimates of undeveloped power based on different rates of flow: the first column indicates continuous power ordinarily available during periods of low discharge under existing conditions of river flow based on Q95, which is the natural or modified flow available 95 p.c. of the time; the second column shows dependable maximum power based on Q50, which is the natural or modified flow available for at least 50 p.c. of the time; and the third column shows dependable maximum power based on Qm, the arithmetical mean flow. On rivers for which flow records are sparse or non-existent, estimates of flow are made from available information relating to run-off in the same general area. The hydraulic head used in calculating undeveloped water power is based on the actual drop or the feasible concentration of head which has been measured or carefully estimated. Preliminary figures for Quebec supplied by the provincial Department of Natural Resources, however, reflect the net river power potential which would result from development of the entire head available on Quebec rivers.

It should be emphasized that the figures of the first two columns represent only the minimum water power possibilities in Canada for the reason that the estimates are based upon existing river flow and, for the most part, do not reflect the benefits of streamflow regulation that would result from the development of storage potential. On the other hand, the arithmetical mean flow figures represent the power that would be obtainable if the entire flow in the river could be regulated to provide a continuous flow of constant magnitude. It can readily be seen that, because the latter condition assumes complete regulation, estimates of potential based upon arithmetical mean flow will, if other pertinent factors are neglected, exceed the amount of capacity that might be expected to be installed at the site, particularly where little or no storage is available. However, recent experience in the development of water power sites has indicated that, in fact, the generating capacities installed at many sites are very considerably in excess of what might be dictated by even the arithmetical mean flow. Several major river-diversion possibilities exist, particularly in British Columbia. For this reason, the estimates of potential of British Columbia's undeveloped hydro resources have recently been boosted substantially, mainly because of the inclusion of figures based upon the diversion of rivers which, if they are developed at all, will almost certainly be developed on a combined-river basis.

**Developed Water Power Resources.**—The figures of installed generating capacity given in Table 2 are based on the manufacturer's rating in kilowatts as shown on the generator name-plate, or derived from the rating where it is indicated in kilovolt-amperes. The maximum economic installation at a power site can be determined only by careful consideration of all the conditions and circumstances pertinent to its individual development. It is usual practice, however, to install units having a combined capacity in excess of the available continuous power at Q50, and frequently in excess of the power available at Qm. There are a number of reasons for this. The excess capacity may be installed for use at peak-load periods, to take advantage of periods of high flow, or to facilitate plant or system maintenance. In some instances, storage dams have been built subsequent to initial development to smooth out fluctuations in river flows. In other cases, deficiencies in power output during periods of low flow have been offset by auxiliary power supplied from thermal plants, or by inter-connection with other plants which operate under different load conditions or are located on rivers with different flow characteristics.

Thus, the extent to which the installed capacity exceeds the available continuous power at the various rates of flow is dependent upon the factors that govern the system of plant operation, and varies widely in different areas of the country. In some developments, the difference may amount to several hundred per cent. For this reason, discretion should be used in comparing the figures in the last column with those in the preceding columns, as available continuous power and installed capacity are not directly comparable. As a rough guide, however, it may be assumed that the power equivalent of the flow at Q50 represents an approximate, if conservative, estimate of hydro generating capacity remaining to be installed in Canada.

**Provincial and Territorial Distribution.**—The provincial and territorial distribution of undeveloped water power resources and installed generating capacity, given in Table 2, reveals that substantial amounts of water power have been developed in all provinces except Prince Edward Island, where water power resources are meagre. As natural resource development proceeds, the fortunate incidence of water power in proximity to mineral, forest and other resources becomes increasingly apparent. There is little doubt that the existence of large amounts of potential hydro power on northern rivers will prove to be a factor of prime importance in the eventual realization of the natural wealth of Canada's Northland.

The water power resources of *Newfoundland*, determined on the basis of the limited available streamflow data, are estimated to be of very considerable magnitude. On the Island, although the length of the rivers is generally not great, topography and run-off are favourable for hydro-electric power development. Of the substantial capacity installed, a very large portion serves the pulp and paper industry. In Labrador, the Churchill River and its tributaries, for the most part undeveloped, constitute one of the largest potential sources of water power in Canada.

In *Prince Edward Island* there are no large streams and water power plants are limited in size to those used to operate small mills. The water power resources of *Nova Scotia* and *New Brunswick*, although small in comparison with those of other provinces, are a valuable source of energy and make a substantial contribution to the economies of the two provinces. Numerous rivers in both provinces provide moderate-sized power sites either within economic transmission distance of the principal cities and towns or advantageously situated for use in development of the timber and mineral resources. These provinces are also favoured with abundant indigenous coal supplies.

*Quebec* is the richest of all the provinces in water power resources, possessing approximately 45 p.c. of the total recorded for Canada. Quebec also leads in developed water power, its present installation of 10,339,000 kw. representing about 48 p.c. of the national total. The largest single hydro-electric installation in Canada is the Quebec Hydro-Electric Commission's 1,574,260-kw. Beauharnois development on the St. Lawrence River; also notable are the Commission's Bersimis I development on the Bersimis River having an installed capacity of 912,000 kw., and the Aluminum Company of Canada Limited's 742,500-kw. Chute des Passes plant on the Peribonca River. A major power project which represents a significant advance in the development of Quebec's hydro-electric resources is under construction. This project, involving the harnessing of the headwaters of the Manicouagan and Outardes Rivers, will permit the eventual installation of some 5,800,000 kw. on the two rivers. Power production in the province is facilitated by the regulation of streamflow by the provincial Department of Natural Resources through the storage dams which it owns and operates. In 1965, some of the responsibility for regulation was transferred to the Quebec Hydro-Electric Commission.

Almost all of the sizable water power potential in *Ontario* within easy reach of demand centres has been developed and planners are looking to the more remote sites as new sources of supply. Improvements in long-distance transmission techniques have brought many of these sites within the economic orbit of demand centres. Several sites are being developed and a number of others are under investigation. Most of the hydro-electric power produced in the province comes from the generators of The Hydro-Electric Power Commission of Ontario, Canada's largest power producing and distributing organization. Ontario's largest generating station is located on the Niagara River at Queenston, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2, and the associated pumping-generating station have a combined generating capacity of 1,804,200 kw. In addition to the power generated in its own plants, the Commission purchases large amounts of electric power generated outside the province, chiefly in Quebec.

Of the three Prairie Provinces, *Manitoba*, with immense hydro-electric capabilities on the Winnipeg, Churchill, Nelson and Saskatchewan Rivers, is the most generously endowed with water power resources. Until recently, hydro-electric generating stations

on the Winnipeg River supplied most of the power requirements of southern Manitoba. Manitoba Hydro's high-voltage, long-distance transmission lines, however, will carry ever-increasing amounts of power south from hydro-electric stations on northern rivers to help meet the province's constantly growing power demands. Large water power resources exist in the central and northern parts of *Saskatchewan*, principally on the Churchill, Fond du Lac, and Saskatchewan Rivers. In 1963, power from Squaw Rapids, the first hydro development on the Saskatchewan River, was fed into the transmission network of the provincially owned Saskatchewan Power Corporation, which serves the more settled areas of the province. These areas previously had been served by electric power from thermal plants fuelled by coal, oil or natural gas, the hydro-electric power generated in the province being used almost exclusively for mining purposes in northern areas. In *Alberta*, the principal hydro-electric developments are located on the Bow River and its tributaries and, from these developments, Calgary Power Ltd. serves most of the southern part of the province. In 1965, energy from a large hydro unit on the Brazeau River in the headwaters of the North Saskatchewan River came on line, augmenting the energy from the Bow River plants. Substantial water power resources are located in the northern regions and, although these are somewhat remote from present centres of population, the advent of extra-high-voltage transmission has enhanced the prospect of their development.

*British Columbia* has many mountain streams that offer abundant opportunity for the development of hydro-electric power. In terms of recorded available water power resources, developed and undeveloped, the province ranks second in Canada and is exceeded only by Quebec and Ontario in the amount of generating capacity installed. Notable for the magnitude of their power potential are such rivers as the Columbia, the Fraser, the Peace and the Stikine. Up to the present time, however, hydro-electric developments on smaller rivers in the southern areas have satisfied the major load requirements of the province but now the immense power resources of the Peace River are in process of being harnessed and by 1968 will supplement the energy supply. Development of the Columbia River, now well under way, is designed to provide initially three huge storage reservoirs and eventually to make available a significant amount of 'at site' power in the Canadian portion of the basin. The foremost producer and distributor of electric power in British Columbia is the provincially owned British Columbia Hydro and Power Authority.

Power from present developments in the *Yukon Territory* and the *Northwest Territories* is used almost exclusively to satisfy the needs of local mines and adjacent settlements. Owing to the lack of developed native fuel sources and to transportation difficulties, water power is of special importance in the development of mining areas, such as Mayo in the Yukon Territory and Yellowknife in the Northwest Territories. In 1948, to encourage the development of the resources of Northern Canada, the Federal Government established what is now the Northern Canada Power Commission (see p. 150), to be responsible for the construction and management of public utility plants. In Yukon Territory, most of the resources are located on the Yukon River and its tributaries. The possibility exists of diverting the headwaters of the Yukon River through the Coast Mountains to utilize a high head near tidewater in northern British Columbia but such a development would affect adversely the potential of sites on the main river. Resources in the Northwest Territories have not been surveyed to the same extent as those in Yukon Territory but they are nevertheless known to be of considerable magnitude, particularly on rivers flowing into Great Slave Lake. Of major significance, as well, is the hydro-electric potential of the South Nahanni River, which drains to the Mackenzie River via the Liard River. On the basis of preliminary investigations, it is estimated that, with total regulation and complete use of the head susceptible of development, the hydro-electric potential of the South Nahanni River would be close to 1,000,000 kw. Indications are that the rivers draining the District of Keewatin, north of Manitoba, could also contribute materially to the total power potential of the Northwest Territories.

### Subsection 4.—Thermal Power Generation

The incidence of immense water power resources in Canada and the brisk pace of their development has tended to overshadow the very considerable contribution being made by thermal energy in the nation's power economy. At the end of 1965, the total installed thermal capacity in Canada was 7,602,000 kw., about 26 p.c. of the total electric generating capacity in the country. The fact that energy produced in thermal plants during the year accounted for only 18 p.c. of the total may be attributed in part to the fact that a considerable amount of the capacity installed is maintained for stand-by purposes. As stated earlier, however, the current emphasis on thermal plant construction is likely to continue and to become more marked as development of the nation's water power reserves becomes more complete.

**Conventional Thermal Power.**—Approximately 85 p.c. of all of the conventional thermal power generating equipment in Canada is driven by steam turbines. The magnitude of the loads being carried by steam plants has led to the installation of steam units with capacities as high as 300,000 kw. Even larger units, of 500,000-kw. capacity, will go into service within the next three or four years. The remainder of the load is carried by gas turbine and internal combustion equipment. The flexibility of internal combustion engines makes this type of equipment particularly suitable for meeting power loads in smaller centres, especially in the more isolated areas.

Table 1 (p. 636) shows that the Provinces of Prince Edward Island, Nova Scotia, Saskatchewan and Alberta depend upon thermal capacity for most of their power requirements and that New Brunswick has slightly more thermal than hydro. For Ontario, where the present hydro capacity is about twice the thermal, forecasts based on present construction schedules indicate that by the early 1970s the province's total installed thermal capacity will have overtaken hydro.

With the exception of several sizable plants in St. John's and Grand Falls, most of the thermal-electric capacity in *Newfoundland* is made up of relatively small units used to supply power to small, often isolated communities. With the wealth of water power readily available in the province, it is not likely that Newfoundland will experience the need for large thermal stations for some time to come. *Prince Edward Island* depends almost exclusively on thermal sources for its power supply and almost all of the province's generating capacity is oil-fuelled. In *Nova Scotia*, most of the energy generated in thermal-electric utility plants is derived from coal, with a smaller amount from petroleum fuels, and in *New Brunswick* petroleum fuels provide slightly more than half of the thermal-electric energy.

The abundance of *Quebec's* water power wealth, much of it within economic transmission distance of existing demand areas, has so far limited the application of thermal power to specific local use. However, the growing emphasis on thermal power in other parts of Canada is also beginning to be apparent in Quebec, where thermal capacity will serve not only to help guarantee an adequate power supply in the face of increasingly heavy demands but also to render the almost exclusively hydro-electric base more flexible through integrated operation. The second unit of a large thermal plant went into operation at Tracy near Sorel in 1965 and a second large plant is planned for service in the Gaspé region by 1970.

*Ontario* has more thermal capacity than any other province in Canada; capacity installed in the province at the end of 1965 totalled 3,217,000 kw., which was about 42 p.c. of the national total. With another 3,200,000 kw. of conventional thermal capacity and 1,400,000 kw. of nuclear thermal capacity scheduled for service in the period 1966-71, Ontario's share of the national total promises to increase considerably. The country's largest thermal stations are Ontario Hydro's Richard L. Hearn and Lakeview generating stations at Toronto, each with a capacity of 1,200,000 kw. Four 300,000-kw. units, the largest in operation in Canada, make up the capacity at the Lakeview station, scheduled for expansion

to 2,400,000 kw. by 1968. Four even larger units of 500,000-kw. capacity are planned for the Lambton station near Sarnia, installation of which will be completed by 1971.

*Manitoba* supplements its predominantly hydro-based power supply with a substantial amount of thermal capacity but current emphasis is on development of water power resources. *Saskatchewan*, until recently, has relied on thermal capacity to satisfy the needs of the more settled areas and hydro-electric power generated in the province has been used almost exclusively for mining purposes in the northern areas. In the past few years, however, development of storage on the South Saskatchewan River has made hydro-electric power available in the southern part of the province and plans for expanding the province's thermal capacity are limited for the present to a proposed extension to the 132,000-kw. Boundary Dam thermal station. The incidence of vast fuel resources accounts for the emphasis on thermal power generation in *Alberta*; the province's largest thermal plants are the 330,000-kw. gas turbine and steam station at Edmonton and the 282,000-kw. Wabamun steam station.

More than half of *British Columbia's* thermal generating capacity is installed in three plants located in the Vancouver area. The capacity of the largest of these plants, the 450,000-kw. Burrard generating station, is expected to be increased to 600,000 kw. by 1967.

Until 1965, most of the power requirements of the *Northwest Territories* were satisfied from thermal sources but the commissioning of the Twin Gorges hydro station on the Taltson River in 1965 has altered the balance in favour of hydro. In *Yukon Territory*, hydro is the larger contributor. Most of the thermal-electric energy in the Territories is generated by small diesel units.

**Nuclear Thermal Power.**—Commercial electric power generated from the heat of nuclear reaction became a reality in Canada in 1962 when the 20,000-kw. Nuclear Power Demonstration station at Rolphton, Ont., fed power for the first time into a distribution system in Ontario. The NPD station is the forerunner in a series of large nuclear stations that will shoulder more and more of Canada's rapidly growing power loads.

Research into reactor design and the application of nuclear energy in the electric power field are among the more important responsibilities of Atomic Energy of Canada Limited, a Crown company incorporated in 1952 (see also pp. 391-396). AECL has concentrated its efforts on the development of the CANDU reactor, which uses natural uranium as a fuel and heavy water as the moderator. By using heavy water as the moderator, a high energy yield can be obtained from natural uranium and, since natural uranium is a low-cost nuclear fuel, the cost of fuel is a minor component in the cost of producing power. Natural uranium has the added attraction of being available in commercial quantities in Canada.

The Canadian nuclear power reactor also offers the simplest of nuclear fuel cycles. Sufficient energy can be extracted from the fuel so that the economics of the system do not require a value to be placed on the spent fuel. There is, therefore, no need to carry out costly chemical processing of the spent fuel unless the worth of the remaining contained fissile material becomes sufficiently high to make chemical processing an economic proposition. The spent fuel is an ideal package for simple underwater storage and no large volume of highly radioactive liquids from a chemical processing plant has to be handled and contained.

The NPD station has been used extensively to demonstrate the ability of the system to operate at a high capacity factor and to determine the nature and predictability of outages. Fuel changes while the system is in operation have become routine and a considerable amount of research into the sources of heavy water losses has been carried out. As a result of this research, losses have been cut considerably and the NPD station is demonstrating that a very acceptable heavy water loss rate is attainable.

At Douglas Point on the shore of Lake Huron, the country's first full-scale nuclear power station will begin commercial production at the end of 1966. The station, built with the co-operation of Ontario Hydro, houses a 200,000-kw. CANDU reactor. Experience

gained in the design and operation of this reactor has encouraged the development of even larger units and plans have been announced for the construction of the two-unit, 1,080,000-kw. Pickering nuclear station to be built near Toronto, with in-service dates for the two units scheduled for 1970 and 1971.

## Section 2.—Progress in Construction of Generating Facilities, 1965

During 1965 Canada's electric power generating capacity increased by the massive total of 2,242,000 kw. Hydro capacity accounted for 1,434,000 kw. and thermal for the remaining 808,000 kw. With the exception of 1959, when nearly 2,500,000 kw. of new capacity went into service, the 1965 increase was the highest ever recorded in a single year and almost tripled the 1964 total of 754,000 kw. The new capacity that began service in 1965 boosted the nation's total installed generating capacity to 29,400,000 kw., 21,800,000 kw. of which was hydro and the remaining 7,600,000 kw. thermal. On the basis of present estimates, almost 1,800,000 kw. of new generating capacity will go into service in 1966, 883,000 kw. of this in hydro plants and 875,000 kw. in thermal stations. Including the new capacity scheduled for 1966, Canada's power producers have under construction or have scheduled a total of 16,500,000 kw. which will come into service within the next few years, of which hydro capacity will account for 9,700,000 kw. and thermal the remaining 6,800,000 kw. These estimates, however, do not include the vast water power potential that may eventually be developed on the Churchill River in Labrador, the Nelson River in Manitoba or the Columbia River in British Columbia.

**Atlantic Provinces.**—In *Newfoundland*, the Bay d'Espoir hydro site under development by the Newfoundland and Labrador Power Commission is designed for six units, three of which are scheduled for service in March 1967; total eventual generating capacity at Bay d'Espoir is expected to be 459,000 kw. In 1965, the Commission built 11 small thermal plants with capacities ranging from 80 kw. to 300 kw., adding 1,900 kw. to the province's thermal capacity. The new 12,500-kw. gas turbine plant being built by the Commission at Holyrood is expected to be in service in September 1966. Development of the immense hydro potential of Churchill Falls on the Churchill River in Labrador awaits completion of marketing negotiations. For full development of the 1,040-foot fall, Churchill Falls Power Corporation Limited proposes an installation of ten units with a total generating capacity of 3,914,000 kw.

In *Nova Scotia*, the Nova Scotia Light and Power Company Limited steam plant at Tuft's Cove began operation in 1965 with one 100,000-kw. unit, the first in a multi-unit development that may eventually provide more than 500,000 kw. of generating capacity. The Company has under consideration the development of two sites expected to yield a combined total of 16,200 kw. of hydro capacity—at Lequille (11,200 kw.) on the Allain (Lequille) River and at Alpena (5,000 kw.) on the Nictaux River. Capacity of the Nova Scotia Power Commission's hydro plant at Weymouth Falls on the Sissiboo River will be more than doubled by the addition of a 10,400-kw. unit in November 1967, bringing the plant capacity to 19,400 kw. Two hydro sites are being considered for development by the Commission—Wreck Cove on Wreck Cove Brook is proposed for development to a capacity of 67,500 kw. and Riverdale on the Sissiboo River to a capacity of 6,000 kw.; neither development has yet been scheduled. Electric power and steam supply for the Glace Bay heavy-water plant will be supplied from the Seaboard Power Corporation Glace Bay thermal station. To take care of the additional load, the Glace Bay station has been extended to house a new 38,000-kw. steam unit. A new single-unit thermal plant with a generating capacity of 3,750 kw. was put into operation at Dartmouth by Imperial Oil Limited.

In *New Brunswick*, the new Sisson hydro plant built by New Brunswick Electric Power Commission on the Tobique River was commissioned in 1965; its capacity is 10,000

kw. in one unit. Development of the Mactaquac site on the St. John River was proceeding on schedule and the first three 100,000-kw. units should be in operation early in 1968; Mactaquac is designed for six 100,000-kw. units, all of which will be in service by 1976. The Commission increased the capacity of its Courtenay Bay steam plant at East Saint John to 63,365 kw. by the addition of a 13,365-kw. unit and further boosts of 110,000 kw. each are scheduled for 1966 and 1967, respectively. In May 1965, the Maine and New Brunswick Electric Power Company Limited installed a 20,800-kw. unit at the Tinker hydro plant on the Aroostook River, bringing the total installed generating capacity to 30,840 kw.

**Quebec.**—In 1965, Quebec's extensive program of power-plant construction added 905,000 kw. of new capacity to the province's already considerable total of almost 10,000,000 kw., the new capacity consisting of 755,000 kw. hydro and 150,000 kw. thermal. A total of 451,920 kw. of new capacity, all hydro, is scheduled for 1966. On the basis of present scheduling, more than 5,250,000 kw. of new capacity, most of it hydro, should come into service in Quebec during the years 1967-74.

One of North America's most spectacular engineering projects, the harnessing of the power potential of the Manicouagan and Outardes Rivers, went ahead on schedule during 1965. The project involves the construction of seven new hydro plants on the two rivers and the installation of additional capacity at an existing station. The total amount of new generating capacity to be made available by the Manicouagan-Outardes project will be in excess of 5,500,000 kw. Manic 2, eleven miles from the mouth of the Manicouagan River, went into operation in 1965 with 635,000 kw. of generating capacity in five units; three more units will complete the development of Manic 2, two scheduled for 1966 and the third for 1967. Manic 1, the next plant scheduled to produce power on the Manicouagan, will be in service in 1966 with two units, each rated at 61,660 kw.; a third unit, which will complete the development of Manic 1, will be in service in 1967. The largest development in the Manicouagan-Outardes hydro complex is Manic 5, designed for a total generating capacity of 1,344,000 kw. in eight units. When completed, the buttressed, multi-arch dam at Manic 5 will be over 4,000 feet long and 703 feet high at the highest point above bedrock and will be one of the highest and most massive dams of its kind in the world. First power is expected in 1970 and completion of the plant in 1972. Last of the new Manicouagan plants to come into service in the current program will be Manic 3, with a total generating capacity of 1,120,000 kw. in seven units; initial service is scheduled for 1972 and complete service for 1974.

On the Outardes River, power at Outardes 4 will be generated by four 158,000-kw. units, the first three of which will be in service in 1968 and the fourth in 1969. The dam at Outardes 4 will create a reservoir with a surface area of more than 250 sq. miles. The underground powerhouse planned for Outardes 3 will house four 189,000-kw. units. Three are scheduled for initial operation in 1968 and the fourth in 1969. The Outardes 2 plant, adjacent to the existing Outardes Falls station, is due to go into service in 1968 with a total capacity of 447,000 kw. in three units.

Elsewhere in the province, Quebec Hydro is developing two sites on the Quinze Rapids reach of the Upper Ottawa River to supply power to the rapidly developing northwestern region: the Rapides-des-Îles plant is designed for four 37,300-kw. units, two scheduled for 1966, the third for 1967, with development of the fourth dependent upon the magnitude of local power demands; the First Falls plant is designed for 112,000-kw. capacity in four units, three to be installed at the rate of one a year from 1968 to 1970 and the fourth at a later unscheduled date.

The capacity of Quebec's first large thermal station, the Tracy plant near Sorel, was increased in 1965 by the addition of a second 150,000-kw. unit to bring the station capacity to 300,000 kw. Two more units are scheduled for 1967. A new steam plant equipped with two 150,000-kw. generators will come into operation in 1970 to supply power to the Gaspé region.

The year 1965 was a milestone in the history of electric power transmission in Canada. Extra-high-voltage transmission is not new in this country but in 1965, for the first time, power was carried over a transmission line at 735 kv., the highest AC voltage in commercial use anywhere in the world. The 735-kv. line commissioned in 1965 is the first of three extra-high-voltage lines built to carry power from the Manicouagan-Outardes hydro complex to demand centres in the Quebec City-Montreal area.

Manicouagan Power Company installed two 60,000-kw. units at the McCormick hydro plant on the Manicouagan River, bringing the total plant capacity to 311,250 kw. This plant will be integrated with Quebec Hydro's Manic 1 plant, now under construction, and with the Manicouagan-Outardes project.

**Ontario.**—During 1965, the power development program of The Hydro-Electric Power Commission of Ontario involved construction work on three hydro stations, four conventional thermal stations and two nuclear-electric plants. Extensions to two existing hydro stations were being planned and investigation of a number of hydro sites was continuing. The hydro stations under construction were the Harmon and Kipling stations on the Mattagami River and the Mountain Chute station on the Madawaska River; the conventional thermal plants were the Lakeview and Lambton coal-fired stations near Toronto and Sarnia, respectively, supplemented by the smaller oil-fired combustion turbine installations at the A. W. Manby station in Toronto and the Sarnia-Scott station in Sarnia; the nuclear-electric stations were the Douglas Point station on the shore of Lake Huron and the Pickering station near Toronto.

The Harmon hydro development began operation in 1965 with a generating capacity of 129,200 kw.; there is provision in the plant for two additional units. Kipling station, designed for a capacity of 125,400 kw. in two units and with provision for two additional units, was scheduled for operation in 1966. At the Mountain Chute hydro site on the Madawaska River, two units, each rated at 69,750 kw., are scheduled for service in late 1967. Ontario Hydro proposes to install additional generating capacity at Barrett Chute and Stewartville stations, both of which went into service in the 1940s on the Madawaska River downstream from Mountain Chute. At Barrett Chute the addition of two 60,000-kw. units in 1968 will bring the total capacity to 160,800 kw., and at Stewartville two 50,000-kw. units to go into operation in 1969 will increase the capacity to 161,200 kw.

Studies are being carried out to determine the feasibility of further development of the hydro potential of the Montreal and Mississagi Rivers—the first projects to be undertaken will probably be the development of the Lower Notch site and the redevelopment of the Upper Notch site, both on the Montreal River.

At Lakeview generating station on the shore of Lake Ontario, installation of the fourth 300,000-kw. unit was completed in 1965. The ultimate capacity of Lakeview will be 2,400,000 kw. in eight units, the eighth unit scheduled for service in 1968. The Lambton station, on the St. Clair River about 14 miles south of Sarnia, will house four 500,000-kw. units to come into service at the rate of one a year between 1968 and 1971. Ontario Hydro is to install a number of combustion turbine generators in southern Ontario to serve as stand-by units and to contribute to the provision of an adequate margin of reserve capacity at times of peak load, particularly during the present period of rapid load growth. Six units were purchased in 1965, four with a rated capacity of 16,320 kw. per unit for installation at the A. W. Manby Service Centre in western Metropolitan Toronto and two rated at 15,000 kw. per unit for installation at the Sarnia-Scott Transformer Station in Sarnia. The two units at Sarnia-Scott Transformer Station and two of the units at the A. W. Manby Service Centre went into operation in December 1965. Installation of the other two units at the Service Centre will be completed in 1966.

At Douglas Point Nuclear Power Station, installation and testing of the CANDU reactor were well under way at the end of 1965. The 200,000-kw. unit was expected to be

ready to deliver power to Ontario Hydro's East System in late 1966. Work continued on the site preparation for the 1,080,000-kw. Pickering nuclear-electric station, the two 540,000-kw. units being scheduled for initial operation in 1970 and 1971. The site is suitable for a larger station and additional units may be installed later.

**Prairie Provinces.**—In *Manitoba*, three 110,000-kw. units went into operation in 1965 at Manitoba Hydro's Grand Rapids hydro station on the Saskatchewan River. A fourth unit, scheduled for August 1968, will complete the planned development of the Grand Rapids site. The Federal Government has agreed in principle to participate with Manitoba in the development of the hydro potential of the lower Nelson River. The initial stage will include construction of a hydro plant at Kettle Rapids, diversion of flow from the Churchill River into the Nelson River system near Thompson, regulatory works at the outlet of Lake Winnipeg to control the level of that lake and the outflow from it, and high-voltage transmission lines from the Kettle Rapids site southwest to Winnipeg. The role of the Government of Canada will consist of the construction, financing and ownership of the main high-voltage transmission lines and the branch lines which may be built to international and provincial boundaries should markets develop.

In *Saskatchewan*, Squaw Rapids hydro plant, under development by the Saskatchewan Power Corporation on the Saskatchewan River, will reach a generating capacity of 244,000 kw. in 1966 when installation of the seventh unit is completed; an eighth unit, also rated at 43,000 kw., is scheduled for 1967. At the South Saskatchewan River Project near Outlook, first power is expected in 1968 when two 62,200-kw. generators go into service; a third unit of the same size will be added in 1969. The dam and reservoir at the project are being built by the Prairie Farm Rehabilitation Administration for irrigation purposes and power generating facilities will be installed by the Saskatchewan Power Corporation.

The Corporation is adding a 15,000-kw. gas-fired unit at the Swift Current plant to bring its total capacity to 29,550 kw. in 1966 and consideration is being given to the possibility of adding one or two more 15,000-kw. units for operation in late 1967. Contracts have been awarded for two 150,000-kw. steam turbines for Boundary Dam thermal station to be commissioned in 1969 and 1971, bringing the station's capacity to 432,000 kw.

In *Alberta*, the first unit at the Calgary Power Ltd. Big Bend hydro development on the Brazeau River went into service in 1965. The 144,000-kw. generator is driven by a turbine rated at 210,000 hp., the highest rating of any unit in service in Canada. A second unit, consisting of a 175,000-kw. generator and 250,000-hp. turbine, is scheduled for late 1966. The main plant is capable of housing four units. At the Big Bend site, water is carried to the main powerhouse by a 12-mile canal. A pumping-generating plant is incorporated at the outlet of the storage reservoir. The company's Wabamun thermal station is being extended to house a 300,000-kw. coal-burning steam unit. The new unit, installation of which should be complete in late 1967, will boost the station capacity to 582,000 kw.

Canadian Utilities Limited are installing a 150,000-kw. coal-fired steam turbo-generator at the Battle River thermal plant near Forestburg for service in 1969; existing capacity at Battle River is 66,000 kw. A 20,000-kw. gas turbine unit will be installed at Simonette for operation in October 1966. Although the company does not at present operate hydro-electric generating facilities, a study of the hydro potential of the Smoky River in the Grande Prairie area has been carried out and eight sites are under consideration for possible development. The capacities that could be installed at the eight sites vary between 60,000 kw. and 620,000 kw. A 75,000-kw. gas-fired steam turbo-generator being installed at the Edmonton thermal plant is scheduled for initial service in 1966; it will bring the plant generating capacity to 405,000 kw. The City is to build a new thermal plant housing two 165,000-kw. gas-fired units, scheduled for 1970 and 1973. Chemcell (1963) Limited expects to put a new 4,000-kw. unit into service in 1966 at its 18,000-kw. Clover Bar thermal station at Edmonton.

**British Columbia.**—Substantial progress on the British Columbia Hydro and Power Authority's Portage Mountain development on the Peace River was reported in 1965. The development is planned for ten units with a total capacity of 2,270,000 kw., three of which are scheduled for service by the autumn of 1968. Work progressed on the three storage dams being built by British Columbia Hydro and Power Authority under the terms of the Columbia River Treaty, which entitle Canada to one half the power benefits accruing in the United States from the regulation of 15,500,000 acre-feet of water to be stored in Canada behind the Duncan, Arrow and Mica Dams and one half the value of the estimated flood damage prevented in the United States through the operation of the dams for flood control. The three storage dams are required by the Treaty to be in operation in 1973. The third 150,000-kw. unit at British Columbia Hydro's Burrard thermal station went into operation in 1965, bringing the station's total capacity to 450,000 kw. and a fourth 150,000-kw. unit should be in service in September 1967. Ultimate capacity of the plant will be 900,000 kw. in six units. During the year, generating capacity was boosted at eight of the Authority's diesel stations by a combined total of 28,361 kw.

The City of Revelstoke added a second 4,000-kw. unit at the Walter Hardman hydro plant in 1965, bringing the plant capacity to 8,000 kw. The fourth and final unit at the Cominco Ltd. Waneta hydro station on the Pend d'Oreille River will be in operation in 1966; the new unit, rated at 76,000 kw., will increase the station capacity to 292,000 kw. A 34,560-kw. turbo-generator being installed by Columbia Cellulose Company Limited for 1966 operation at the bleached-kraft mill at Watson Island near Prince Rupert will supply electric power from process steam. MacMillan, Bloedel and Powell River Limited have ordered a 30,000-kw. steam turbo-generator for the 14,925-kw. Powell River plant, to be in service in late 1966. Capacity of the Alco Ltd. Kemano hydro station will be boosted to 812,800 kw. in 1967 with the addition of an eighth unit, rated at 105,600 kw.

**Yukon and Northwest Territories.**—In 1965, Northern Canada Power Commission commissioned its Twin Gorges hydro plant on the Taltson River, 35 miles northeast of Fort Smith, N.W.T. This plant has an installed capacity of 18,000 kw. in one unit and is the largest hydro station in the Territories. A total of 1,610 kw. of new thermal capacity was added in 1965 at various locations in the Northwest Territories and 120 kw. in Yukon Territory.

### Section 3.—Power Generating Capability and Load Requirements

Power generating *capability*, as covered in this Section, is the measurement of the available generating resources of all hydro and thermal facilities at the time of the one-hour firm peak load for each reporting company, and is not equal to the *capacity* of such generating facilities. For example, a hydro plant may have a capacity of 100,000 kw. but if, at the time of peak load, the water available for generation is only 80 p.c. of the plant capacity requirements, then its capability is 80,000 kw.

Total generating capability has grown at a rapid rate since 1955. The annual rate of increase was 7.2 p.c. in the ten-year period 1955-65 and 5.6 p.c. in the four-year period 1961-65. In comparison, the forecast rate of growth for the years 1966-70 is 7.4 p.c.; thermal generating capability is expected to grow at an average rate of 13.5 p.c. a year in the forecast period compared with 13.8 p.c. in the period 1955-65 but hydro-electric capability is expected to increase at 5.0 p.c. a year compared with 5.7 p.c. in the 1955-65 period. This increased rate of growth in hydro generating capability in the forecast period is attributable to the large power projects under construction in relatively remote areas which will be completed within the next few years.

Among the provinces, Quebec has the largest generating capability, followed by Ontario, British Columbia and Alberta. Quebec also has the largest hydro-electric gener-

ating capability, followed by Ontario and British Columbia, but Ontario has the largest thermal capability, followed by Alberta and British Columbia. The first nuclear capability is scheduled in Ontario for late 1966.

The largest absolute growth in generating capability for the forecast years is indicated for Ontario amounting to 4,450,000 kw., followed by Quebec 3,269,000 kw., British Columbia 1,544,000 kw. and New Brunswick 621,000 kw. Ontario will meet most of its increased generating capability by adding 3,921,000 kw. in thermal capability and 529,000 kw. in hydro capability, the former including 700,000 kw. nuclear. Quebec will add 2,928,000 kw. hydro and 341,000 thermal and British Columbia 1,308,000 kw. hydro and 236,000 kw. thermal. Thus, it is apparent that thermal capability is becoming of greater importance, partly because of decreasing availability of hydro resources in provinces such as Ontario and partly because technological advances have made possible much more efficient use of thermal fuels in the operation of thermal base load plants.

*Firm power peak load* is the measure of the maximum average net kilowatt demand of one-hour duration from all loads, including commercial, residential, farm and industrial consumers as well as the line losses. Such load demand increased at the rate of 6.9 p.c. a year from 1955 to 1965 and 7.2 p.c. a year from 1961 to 1965; peak load demand is forecast to increase at the average rate of 7.6 p.c. a year in the period 1966-70. As a result of the rapid increase in generating capability and the somewhat slower but steady increase in the peak loads, together with the slight reduction in deliveries of firm power to the United States, the indicated reserve on net generating capability increased each year from 1955 to 1965, with the exception of 1961, 1963 and 1964. The forecast is for increases from 1966 to 1970 with the exception of 1966. The reserve ratio as a percentage of firm power peak load, which reached a high of 28.2 p.c. in 1960, is expected to decrease to 15.8 p.c. in 1970.

### 3.—Net Generating Capability, by Province, 1965

(Thousand kilowatts)

Province or Territory	Type of Generating Facility				Total
	Hydro-Electric	Thermal-Electric

## Section 4.—Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy that they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back to 1956. Earlier reports, entitled *Central Electric Stations*, were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

The figures of total water and thermal power generated for the years 1951-55 shown in Table 5 are compiled on the old basis, figures for 1956 are shown on both bases for comparative purposes, and those for later years are on the new basis.

## 5.—Electric Energy Generated, by Type of Station 1951-64, and by Province 1963 and 1964

Year and Province or Territory	Generated by—		Total	Year and Province or Territory	Generated by—		Total
	Water Power	Thermal Power			Water Power	Thermal Power	
	'000 kwh.	'000 kwh.	'000 kwh.		'000 kwh.	'000 kwh.	'000 kwh.
1951.....	52,955,002	1,896,842	54,851,844	1958.....	90,509,200	6,975,089	97,484,289
1952.....	57,023,530	2,385,668	59,409,198	1959.....	97,039,830	7,588,653	104,628,483

<sup>1</sup> New series, see immediately preceding text.

Of the total generation in 1964 of 134,986,747,000 kwh., 84.0 p.c. was produced from water power and 16.0 p.c. was generated thermally; the proportions differed somewhat among provinces as shown in the following statement.

Province	Hydro	Thermal	Province or Territory	Hydro	Thermal
	p.c.	p.c.		p.c.	p.c.
Newfoundland.....	94.6	5.4	Ontario.....	76.0	24.0
Prince Edward Island....	—	100.0	Manitoba.....	96.2	3.8
Nova Scotia.....	30.1	69.9	Saskatchewan.....	41.0	59.0
New Brunswick.....	40.0	60.0	Alberta.....	17.8	82.2
Quebec.....	99.2	0.8	British Columbia.....	89.4	10.6
			Yukon and N.W.T.....	82.5	17.5

Table 6 gives summary figures of power production and distribution classified by province, and Tables 7 and 8 give figures classified by type of production establishment. Total installed capacity in Canada amounted to 27,027,347 kw. in 1964, an increase of 726,703 kw. over 1963. Of the 1964 total, 21,890,953 kw. were accounted for by utilities and the remainder by industrial establishments. During 1963 and 1964, total sales to ultimate customers amounted to 89,209,338,000 kwh. and 82,344,157,000 kwh.,\* respectively, of which 97.2 p.c. and 99.1 p.c., respectively, was sold by utilities.

Sales to power customers made up 58.4 p.c. of the total in 1963 and 50.9 p.c. in 1964, sales to domestic and farm customers were 28.4 p.c. and 33.1 p.c., and commercial sales 12.2 p.c. and 14.8 p.c. in the respective years. Exports to the United States in 1964 amounted to 4,159,475,000 kwh. compared with 3,612,834,000 kwh. in 1963.

\* Sales to industrial establishments with generating facilities are included in 1963 but excluded in 1964; in the later year they amounted to 14,666,303,000 kwh.

<sup>1</sup> Figures for 1963 include industrial establishments that purchase power and have generating facilities; 1964 figures exclude such establishments of which there were 122 in that year.

<sup>2</sup> Figures for 1963 include revenue from sales to industrial establishments with generating facilities; 1964 figures exclude such revenue which amounted to \$66,475,000 in that year.

<sup>3</sup> Includes 22,304,000 kwh. of 'no value' energy.

<sup>4</sup> Includes 25,860,000 kwh. of 'no value' energy.

Average domestic and farm consumption rose from 5,084 kwh. in 1963 to 5,296 kwh. in 1964. Among the provinces, the averages in 1964 varied from a low of 2,192 kwh. in Prince Edward Island to a high of 6,919 kwh. in Manitoba. For domestic and farm customers the average annual bill was \$77.89 in 1964 as against \$77.10 in 1963, an increase of 1.0 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from 5,985 kwh. per customer in 1963 to 6,361 kwh. in 1964 and the average bill from \$117.16 to \$118.54.

### Section 5.—Public Ownership and Regulation of Electrical Utilities

Federal Government regulation of electrical utilities, particularly with respect to the export of electric power and the construction of lines over which such power is exported, falls within the jurisdiction of the National Energy Board established in November 1959 and concerned with all matters relating to energy resources within the jurisdiction of the Parliament of Canada (see Domestic Trade Chapter XXI, Part II, Section 4 for a brief survey of the functions and operations of the National Energy Board).

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 8, p. 654, giving statistics by type of establishment, shows that 67 p.c. of the total electric power generated in 1964 was produced by publicly operated utilities, 9 p.c. by privately operated utilities and 24 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output until recently was predominantly from privately owned plants and in Ontario almost all electric power is produced by a publicly owned utility. Figures for 1962 and

subsequent years will show a much greater proportion of publicly operated electrical utilities since they will reflect the recent provincial take-over of privately owned facilities in both British Columbia and Quebec.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. Neither Newfoundland nor Prince Edward Island has a provincially operated electric power system, although in the former province a Commission, known as the Newfoundland Power Commission, was established by the provincial government in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly to rural areas. In Prince Edward Island, the town of Summerside and surrounding area is served by the municipally operated Town of Summerside Electric Light Department. The functions and activities of provincially operated electric power commissions in the other provinces are summarized in the following paragraphs.

**Nova Scotia.**—The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act, 1919. The Commission pays regular fees for water rights.

The territory of the Commission extends over the entire province and embraces six systems which include 25 generating stations and more than 5,243 miles of transmission and distribution lines. Installed capacity at the end of 1965 was 184,458 kw. of which 96,708 kw. was hydro capacity. New power plant construction under way in Nova Scotia during 1965 is outlined on p. 644. Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1965 showed total fixed assets of \$94,119,856, including work in progress amounting to \$13,654,064.

**New Brunswick.**—The New Brunswick Electric Power Commission was incorporated under the Electric Act, 1920. Generating stations owned by the Commission at Mar. 31, 1966 were as follows:—

<u>Plant</u>	<u>Type</u>	<u>Capacity</u>	<u>Plant</u>	<u>Type</u>	<u>Capacity</u>
		kw.			kw.
Grand Falls.....	Hydro	63,000	Grand Lake.....	Steam	101,250
Musquash.....	Hydro	6,960	Saint John (Dock St.)..	Steam	16,000
Tobique.....	Hydro	20,000	Chatham.....	Steam	32,500
Beechwood.....	Hydro	112,500	Grand Manan.....	Diesel	1,650
Milltown.....	Hydro	3,036			
Sisson.....	Hydro	10,000	<b>TOTAL CAPACITY.....</b>		<b>430,261</b>
Courtenay Bay.....	Steam	63,365			

All the above generating units with the exception of Grand Manan are interconnected in a province-wide grid system. The statistical information given in Table 12 shows the growth of the Commission's undertakings since 1962. Power plant construction under way in New Brunswick during 1965 is outlined at pp. 644-645.

**Quebec.**—*Stream and Reservoir Control.*—The Quebec Streams Commission was created in 1910 (SQ 1910, c. 5) and given additional powers in 1912 (RSQ 1925, c. 46) and 1930 (SQ 1930, c. 34); it was authorized to ascertain the water resources of the province, to make recommendations regarding their control and to construct and operate certain storage dams to regulate the flow of streams. On Apr. 1, 1955, the Commission was abolished and its powers and attributions transferred to the Hydraulic Resources Department, now the Department of Natural Resources. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable and the Métis. The Commission also operated nine reservoirs on the North River, two in the watershed of the Ste. Anne de Beaupré River and one at the outlet of Lake Morin on Rivière du Loup (lower). In 1965, eleven auxiliary reservoirs on the St. Maurice System and two on the Gatineau were turned over by the Department of Natural Resources to the Quebec Hydro-Electric Commission for operation and maintenance.

Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River controlled by the Aluminum Company of Canada; the Onatchiway on the Shipshaw River controlled by Price Brothers and Company Limited; Memphremagog Lake on the Magog River controlled by the Dominion Textile Company; and Témiscamingue and Quinze Lakes on the Ottawa River controlled by the federal Department of Public Works. Storage reservoirs under the control of the Quebec Hydro-Electric Commission are: Témiscouata Lake on the Mada-

waska River, Kipawa Lake on the Ottawa River, Lac Dozois on the upper Ottawa River, Lac Cassé in the Bersimis River watershed and Lac Ste. Anne on the Toulouste River, a tributary of the Manicouagan River.

*The Quebec Hydro-Electric Commission.*—The Quebec Hydro-Electric Commission was established in 1944 (SQ 1944, c. 22) for the purpose of supplying power to the municipalities to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. On May 1, 1963, the Commission acquired control of the following privately owned electrical utilities operating in the Province of Quebec: the Shawinigan Water and Power Company, the St. Maurice Power Corporation, the Quebec Power Company, the Southern Canada Power Company, the Gatineau Power Company, the Northern Quebec Power Company, the Saguenay Electric Company, and the Lower St. Lawrence Power Company. As a result of these transactions, all electricity production, except for facilities operated by certain industrial organizations in their own manufacturing operations, was brought under the control of a single authority. The services of the Commission now cover virtually the entire province except for local distribution of small amounts of electricity by some municipalities, most of which is purchased from the Commission or its subsidiaries.

At the end of 1965 the Commission (Hydro-Quebec) controlled, among other assets, the following hydro-electric and thermal-electric plants:—

Item	Hydro-Electric		Thermal-Electric	
	Plants	Capacity <sup>1</sup>	Plants	Capacity
	No.	kw.	No.	kw.
Hydro-Quebec only.....	9	4,742,260	1	36,000
Subsidiaries of Hydro-Quebec—

Quebec Power.....	6	28,370	7	1,630
Southern Canada Power.....	4	47,256	—	—
Gatineau Power.....	13	545,880	—	—
Northern Quebec Power.....	1	89,600	—	—
Saguenay Electric.....	4	8,790	—	—
Lower St. Lawrence Power.....	3	11,350	2	5,413
TOTALS.....	51	7,005,931	14	343,783
Purchases by Hydro-Quebec and subsidiaries.....	—	606,000	—	—

<sup>1</sup> Dependable hydro-electric peak capacity at time of freeze-up approximated 6,590,000 kw.

These facilities now permit the balanced distribution of power throughout Quebec and the most efficient use of the water power resources of the province. Hydro-Quebec and its subsidiaries, at the end of 1965, served virtually all communities in the province. Customers numbered 1,539,073 and the distributed primary power demand was 6,911,000 kw. Total power delivered was 6,956,000 kw. Power distributed is given in terms of the net output of the sources of supply made available to the consolidated system at the time of annual primary peak; it also includes purchases of power from other power producers.

**Ontario.**—The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and

subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. Two commissioners may be members of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power supply facilities, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, the province has materially assisted the development of agriculture by contributing under the Hydro-Electric Distribution Act toward the capital cost of extending rural distribution facilities.

The entire provincial area served is regarded for financial and administrative purposes as a unit, but there is no electrical connection between the Commission's facilities in north-western Ontario and those serving customers in the remainder of the province. Statistics are therefore presented for two operating systems, the East System and the West System; the systems respectively serve the areas east and west of a line extending north from Lake Superior to the Albany River, a line that roughly conforms with the boundary dividing Thunder Bay District from the Districts of Algoma and Cochrane.

In addition to administering the enterprise over which it has direct control, the Commission, under the Power Commission Act and the Public Utilities Act, exercises certain regulatory functions, particularly with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission subdivides its province-wide operations into seven regions with regional offices located in seven major municipalities.

The Commission is concerned primarily with the provision of electric power by generation or purchase and its delivery to the electrical utilities for resale in municipalities having cost contracts with the Commission. The Commission supplies power in bulk, though not under cost contract, to direct customers, including industrial customers whose requirements are so large or so unusual as to make service by the local municipal utilities impracticable, mines, industries in unorganized territories, and certain interconnected systems.

In addition to these operations, which represent about 90 p.c. of its energy sales, the Commission delivers electric power to retail customers in rural areas and in a small group of about 30 municipalities served by Commission-owned local distribution facilities. Retail service throughout the province is provided for the most part, however, by the municipal electrical utilities, who supply ultimate customers in most cities and towns, in many villages, and in certain populous township areas. The municipal electrical utilities are owned and operated by local commissions.

During 1965, the Commission's investment in fixed assets at cost increased by \$131,588,092 and at the end of the year amounted to \$2,893,822,848. Total assets after deducting accumulated depreciation were \$2,987,297,556.

In 1965 a total of 360 associated municipal electrical utilities engaged in the retail distribution of electricity purchased power from the Commission. The total assets of these utilities, after deducting accumulated depreciation, amounted to \$924,647,558, of which \$378,707,011 represented the equity acquired in the Commission's systems by the municipal utilities operating under cost contracts.

The Commission's power development program as at Dec. 31, 1965 is given in Table 13 and is also outlined at pp. 646-647.

<sup>1</sup> Dependable peak capacity—the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

### 15.—Distribution of Power to Systems of The Hydro-Electric Power Commission of Ontario, Years Ended Dec. 31, 1960-65

<sup>1</sup> Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

**Manitoba.**—Manitoba Hydro is the primary developing, generating and distributing power agency in the Province of Manitoba. The corporation came into being Apr. 1, 1961, following amalgamation of the two former provincial government utilities engaged in the generation and distribution of electric power.

Manitoba Hydro operates six hydro-electric generating stations, two thermal-electric generating stations and 14 diesel-electric generating plants. The combined generating capability is 1,162,781 kw., hydro installations accounting for 910,000 kw., thermal installations for 244,000 kw. and diesel installations for 8,781 kw. Four of the hydro stations are located on the Winnipeg River and, like the thermal installations, provide power to the southern part of the province. The fifth hydro-electric generating station, rated at 160,000 kw., is situated on the Nelson River 425 miles north of Winnipeg and supplies power to The International Nickel Company of Canada Limited development and the townsite at Thompson. The sixth hydro-electric installation is the newly completed 330,000-kw. Grand Rapids Generating Station located on the Saskatchewan River. This station is connected electrically with southern Manitoba. Diesel installations are used to provide power in isolated northern communities.

In serving its 216,691 urban, rural, commercial and industrial customers, the corporation maintains some 35,264 miles of primary transmission and farm distribution lines. Approximately 98 p.c. of the total resident-occupied farms in the province are electrified and 613 cities, towns and villages are provided with power service. While Manitoba Hydro supplies power for most of the province including the cities and municipalities adjoining the city of Winnipeg and comprising part of Metropolitan Winnipeg, it does not distribute power within the corporate limits of the city although it does supply a portion of the city's power requirements.

Power plant construction in Manitoba in 1965 is outlined at p. 647.

**Saskatchewan.**—The Saskatchewan Power Corporation was established on Feb. 1, 1949, and operates under the provisions of the Power Corporation Act (SS 1950, c. 10, as amended). It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas.

On May 1, 1965, the Corporation purchased the generating and distribution facilities of the City of Regina and its activities now cover the entire province. During the year the

Corporation served approximately 980 urban-size communities in retail sales, and served the cities of Saskatoon and Swift Current, the town of Battleford and the hamlet of Waskesiu in bulk sales. Some bulk power was sold to the Manitoba Hydro-Electric Board and to the City of Regina previous to take-over on an exchange basis.

At the end of 1965, the Corporation served 251,361 retail customers and 42,774 customers located in communities supplied with power through bulk sales, a total of 294,135. The retail customers included 183,785 urban customers and 67,576 classified as rural, mainly farm meters. During 1965, 2,871,800,000 kwh. were made available to customers, of which 2,794,782,000 kwh. were generated in Corporation plants and 77,018,000 kwh. were purchased in bulk. At the end of the year, the Corporation had invested, at cost, \$396,485,000 in electric system assets out of a total of \$551,663,000 in plant-in-service in the combined electric and natural gas systems.

During 1965, Squaw Rapids, the first hydro-electric plant within the provincial system, supplied 34.5 p.c. of the gross generation. At the year-end, the Corporation also owned and operated six steam generating plants—two each at Saskatoon and Estevan, and one each at Regina and Moose Jaw, the latter operated only during the peak months. Steam supplied 60.2 p.c. of total system requirements and three internal combustion gas dual fuel plants—the Kindersley, the Swift Current, and the Regina B—supplied most of the remainder. System capability in operation was assessed at 800,150 kw. with 537,000 kw. in steam plants, 201,000 kw. in hydro and 62,150 kw. in gas turbine and internal combustion units and the Corporation owned and operated 73,290 miles of transmission and rural lines (excluding urban distribution and hi-lines).

Power plant construction in Saskatchewan in 1965 is outlined at p. 647.

<sup>1</sup> November 1962 figure.

**Alberta.**—The generation and distribution of electric power in Alberta is handled by a combination of several municipally owned urban systems and three investor-owned companies serving the greater part of the province. The regulatory authority over the investor-owned systems is the Public Utilities Board, which has jurisdiction over the distribution and sale of electricity. The Board, which controls franchises and rates, has power to hold investigation upon complaint either by a municipality or by a utility company, and following such investigation may fix just and reasonable rates. The Alberta Power Commission controls all phases of system development, including the provincial grid system.

Power plant construction in Alberta in 1964 is outlined at p. 647.

**British Columbia.**—The British Columbia Hydro and Power Authority is a corporation and an agency of the Crown in right of the Province of British Columbia. The electric service of the Authority includes the generation and transmission of electricity and its distribution throughout the areas of British Columbia; the Authority also operates gas, passenger transportation and rail freight services.

Of the Authority's total electric power requirements of 9,611,097,318 kwh. for the year ended Mar. 31, 1966, 6,701,800,625 kwh. or 69.7 p.c. were produced by hydro-electric stations, 2,358,383,396 kwh. or 24.5 p.c. were produced by thermal plants and the remainder, amounting to 550,913,297 kwh., was purchased. Kilowatt-hours of electricity sold during the year (8,505,617,262) rose by a remarkable 15.8 p.c. over 1964-65, nearly double the 8.3 p.c. average annual rate of increase for the preceding five years.

Impressive rates of increase in kilowatt-hours consumed were recorded for all categories of customers during 1965-66.

<i>Category</i>	<i>P.C. Increase Over Previous Year</i>

Across the mile-and-a-half-wide valley of the Peace River in British Columbia rises a 600-foot-high, man-made barrier, half a mile thick at its base, which will hold back 62,000,000 acre-feet of water in a massive reservoir that will take seven years to fill and create 1,000 miles of shoreline. When the project is finished, powerful turbines in an underground powerhouse will spin under the tremendous pressure of water from the reservoir above and generate 2,300,000 kw. of energy for the industries of the future.

At Mar. 31, 1966 the number of customers receiving electric service from the Authority was 529,241, up 26,398 from the previous year. The average annual rate for residential customers dropped from 1.76 cents to 1.52 cents a kilowatt-hour, and the average annual residential consumption rose from 5,486 kwh. to 5,650 kwh.

**Northwest Territories and Yukon Territory.**—The Northern Canada Power Commission, formerly Northwest Territories Power Commission, was created by Act of Parliament in 1948 to supply electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The Commission has authority to construct and operate power plants as required in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo, Y.T., the Snare River northwest of Yellowknife, N.W.T., and the Taltson River northeast of Fort Smith, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Resolution, Fort McPherson, Aklavik, and Field, B.C., and utility plants comprising power, central heat and water and sewerage services at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont.

The Whitehorse Rapids power development, in service since 1958, supplies the Department of National Defence and the Department of Public Works at Whitehorse, most of the power for the city of Whitehorse, and three electric steam generators for heating the Department of National Health and Welfare hospital and two Department of Manpower and Immigration hostels. The two Snare River hydro developments, placed in service in 1948 and 1960, supply power to the mines in the Yellowknife area and, in conjunction with the Bluefish hydro-electric plant of Cominco Ltd., the town of Yellowknife; the two plants are operated by remote control from Yellowknife. The Mayo River plant has supplied power to mining properties in the Elsa and Keno areas and to the communities of Mayo and Keno City since 1952. The Taltson River Hydro Project, commissioned in late 1965, supplies the lead-zinc mining operation at Pine Point, and the communities of Fort Smith and Pine Point; the plant is operated by remote control from Fort Smith. Details of construction in the Territories during 1965 are outlined at p. 648.

## Section 1.—Manufacturing and the Changing Industrial Structure of the Canadian Economy, 1946-65

Changes in the industrial structure of the Canadian economy, as reflected in long-term rates of growth of various industries, show a number of important or interesting developments involving or affecting manufacturing. At least seven major aspects merit comment:—

- (1) The manufacturing industries have increased their apparent share in the gross domestic product in "real" terms—that is, after the effects of price changes have been removed from increases in production.
- (2) The manufacturing industries have been accounting for a lower share of the gross domestic product in current dollars—that is, of production measured at the prices actually prevailing from year to year. This probably reflects a slower rate of rise in prices in manufacturing industries than in the economy as a whole; in turn, the slower price rise is at least partly a result of higher rates of growth in productivity in the manufacturing industries than in the economy as a whole.
- (3) The industrial sectors of the economy that depend relatively heavily on the use of fixed capital or use manufactured goods as materials for further manufacture have probably increased their output more rapidly, in aggregate, than the economy as a whole.
- (4) The introduction of new products and changes in technology have contributed heavily to the expansion of a broad range of individual manufacturing industries where growth has exceeded that of the manufacturing industries as a whole.
- (5) In line with experience in other countries, certain manufacturing industries making products the demand for which is favoured by rising living standards have grown more rapidly than those making products for which demand tends to rise less rapidly than consumer income.
- (6) Manufacturing industries engaged primarily in processing primary products for export have continued to play a key role in the over-all growth of the manufacturing industries. Or, in other words, the growth of the United States economy and its demand for fabricated materials has continued to exert an important influence on the expansion of manufacturing activity in Canada.
- (7) In very recent years, there has been a dramatic rise in exports of finished manufactures to the United States and other countries, although these exports still do not contribute greatly to the over-all volume of manufacturing industries.

\* Sections 1 to 4 were prepared in the Manufacturing and Primary Industries Division, Dominion Bureau of Statistics, and Section 5 in the Information Division, Department of Industry, Ottawa.

An impression of the place of manufacturing in the growth of the economy in the post-war period 1946-65 and of the effect of the growth of various industries upon that of manufacturing is given by the following annual average rates of growth of the major industrial sectors compared with that of all industries; growth is measured by the trend in the official index of their "real" gross domestic product (or physical volume of production).

<i>Rank</i>	<i>Industry</i>	<i>Average Annual Growth</i>	<i>Rank</i>	<i>Industry</i>	<i>Average Annual Growth</i>
		<i>p.c.</i>			<i>p.c.</i>
1	Electric power and gas utilities...	9.6	8	Public administration and defence	4.0
2	Mining.....	9.1	9	Community, recreation, business and personal service.....	3.6
3	Construction.....	5.1	10	Fishing and trapping.....	1.8
4	Finance, insurance and real estate.	5.0	11	Forestry.....	1.7
5	Manufacturing.....	4.8	12	Agriculture.....	1.5
6	Transportation, storage and communication.....	4.6			
7	Trade.....	4.1		ALL INDUSTRIES.....	4.4

The growth rates of the six fastest growing industries all exceeded that of the economy as a whole. It is significant that, although these six together accounted for only 58.4 p.c. of the gross domestic product at factor cost in 1965, over the period 1959-65 they were responsible for 77.5 p.c. of business fixed capital formation. The latter reflects not only their need for new fixed capital because of expanding output but also the relative capital intensity of much of the production represented—that is, the faster-than-average growth of these capital-using industries favoured demand for manufactured construction materials, for machinery and equipment of different kinds and for various materials such as steel, themselves the products of factories.

The following statement shows, for 1964 and 1965 and earlier periods, the share of the gross domestic product accounted for by the manufacturing industries in current dollars and, for comparison, the actual or apparent shares of these manufacturing industries in several other aggregates of the Canadian economy.

<sup>1</sup> Based on monthly sample survey of the labour force; employment reported by manufacturers would represent a somewhat smaller percentage of total employment for a combination of reasons. Statistics for 1961 and later years are not wholly comparable with earlier periods shown.

The declining share of the manufacturing industries in labour income, as shown above, undoubtedly reflects the more rapid growth of output per man-hour in these industries than in the economy as a whole. These figures do not include all fringe benefits and thus are only a partial measure of expenses incurred in connection with the use of labour. Also, since the employment series is not necessarily comparable with the wage and salary statistics over the periods shown, inferences should not be drawn about the trend in average salaries and wages in the manufacturing industries relative to the economy as a whole. By contrast, the share of the manufacturing industries in business gross fixed capital formation (excluding new residential construction) does not show any marked

trend. There may be a connection between this fact and the downtrend in the apparent share of labour income. The increasing productivity per man-hour associated with these downtrends has required heavy capital investments in labour-saving mechanization over and above the expenditures required to merely expand production; there has been, in terms sometimes used by economists, a "deepening" as well as a "widening" of capital. This is underlined by a DBS estimate that the net stock of machinery and equipment in the manufacturing industries rose at an average annual rate of about 12 p.c. between 1946 and 1960\* (like the production growth rates, this excludes the effects of price changes).

Shares in total labour income and in corporation profits are affected, of course, by relative changes in price and wage levels in various manufacturing industries. These shares and the growth of the capital stock are also affected by the changing "mix" of production as between "capital intensive" and "labour intensive" manufacturing industries. It is interesting to note that industry groups for which the production indexes advanced more rapidly than for manufacturing as a whole in the 1946-65 period paid salaries and wages amounting to 45.6 p.c. of their value added by manufacturing in 1949 (the base year for the indexes); by comparison, other manufacturing industries paid salaries and wages amounting to 49.5 p.c. of their value added in the same year. The figure for all manufacturing industries was 48.6 p.c.

The declining share of the manufacturing industries in exports—they account for almost all exports of manufactured goods—is associated with the higher rate of growth of output in the mineral industries noted earlier. As will be seen, the manufacturing industries have maintained the share of their own output that is exported.

Leather products.....	1.6	2.2	17	17
ALL MANUFACTURING INDUSTRIES .....	4.8	4.9	...	...

Where an industry group has been growing more rapidly than the average, it has been increasing its share of the volume of production of manufacturing as a whole; where it has been growing less rapidly than the average, its share has been decreasing.† Two major forces have contributed very noticeably to the expansion of demand for the products of several of the more rapidly growing industry groups—technological change, in a broad sense, and rising per capita real incomes (i.e., incomes adjusted for price changes). The term “technology” in its narrowest sense refers to the methods of production from an engineering viewpoint; in economics it is often expanded to cover the development of new products that better meet the needs of user industries or consumers, drawing upon technical or scientific knowledge and generating new combinations of capital and labour just as progress in the technology of existing products does. As will be seen, the introduction of new products has had a conspicuous effect on Canadian manufacturing during the postwar period. At the same time, some of the industry groups that have grown most rapidly have benefited from the fact that per capita demand for their products tends, in the experience of Canada and of other nations as well, to grow more rapidly than per capita consumer income. On the other hand, some of the slowest growing industry groups shown above make products the demand for which tends, in any nation, to grow relatively less rapidly than per capita income.

The plywood industry may be used as an example of the effects of these forces on the growth of an industry. Technological change both in the industry itself and in the construction industry combined with a rise in per capita consumer real income to increase the production of plywood much more rapidly than the population or the real gross domestic product. The development of waterproof bonding resins prior to the 1946-65 period laid the foundation for much of the expansion of the industry during that period and, in addition, the industry's product met a need of builders and contractors to use less labour

\* These indexes are published in DBS periodical *Industrial Production Index* (Catalogue No. 61-005) and are based on the 1948 standard industrial classification; they will later be converted to the revised (1960) standard industrial classification, thus making them comparable with currently issued dollar and employment data for manufacturing industries.

† Estimates of constant dollar volume of output, as such, are not prepared, so that this is an indirect method of studying changes in the industrial structure of manufacturing.

in putting wood products in place in certain phases of construction. Superimposed on these effects was the more rapid growth of the housing market—and probably of the home improvement market—resulting from rising per capita consumer incomes. The plywood industry also illustrates another impact of technological change on demand for products and on industrial structure which undoubtedly applies widely—that is, the effect of improved methods of production within an industry on its costs and on the price competitiveness of its products. The plywood industry has been particularly subject to advances of this nature, which have helped to expand the use of its product; the DBS selling price index for the industry was lower for 1965 than for 1956, although prices of most lumber had risen over the period.

However, in the following analyses of industry groups attention is focused on the more readily observable types of technological innovation—changes in the product-use patterns of user industries and the development of new products. No attempt has been made to assess the undoubtedly important differential effects of improvements in the productivity of particular industries from automation or other cost-cutting procedures in production.

**Industry Groups.**—As shown in the comparisons of growth rates of industry groups on the opposite page, the *Miscellaneous manufactures* group grew almost twice as fast as manufacturing industries as a whole, both in the 20-year postwar period and in the latest 10 years, and has been the most rapidly growing industry group in both periods. The two most obvious influences on the relative growth rates of manufacturing industries generally—technological change and higher per capita income—appear to have played their part in this very rapid expansion also. Technological change made itself felt in the growth of at least two industries in the group—scientific and professional equipment manufacture and plastics fabrication: the increasing technical sophistication of both the civilian and defence economies, expressed partly in new products, stimulated the production of scientific equipment and instruments; higher consumer incomes probably also had an impact on the scientific and professional equipment industry, since it includes the manufacture of photographic equipment and supplies. Although production figures are not published because of the small number of producers, retail sales of cameras and photographic equipment showed an average annual increase of about 18 p.c. between the 1951 and 1961 Censuses of Merchandising. This increased demand actually represents both forces: technological innovation made photography somewhat more attractive to an unskilled mass public and higher incomes increased their willingness to spend money on it. Imports have met a good part of the demand but there must have been a substantial stimulus to domestic production as well. The rapid expansion of the fabrication of plastics is attributable to technical progress in the area of plastic materials produced mainly by industries in the Chemicals and allied products group.

*Products of petroleum and coal*, the second fastest growing industry group, achieved its greatest expansion during the first postwar decade but has since continued to grow at a substantial rate. The discovery of large crude petroleum resources in the Canadian west in the late 1940s had an influence through their effect on the cost of petroleum products relative to substitutes—a supply consideration lying outside the realm of technology. Rising consumer incomes have favoured automobile ownership; trucking has increased its share of inter-city transportation of goods; and greater relative use of oil for heating and the operation of railway locomotives have been forces acting upon the industry's growth.

The development of Canadian petroleum has also facilitated to some extent the expansion of the *Chemicals and allied products* group although the growth of this group rests largely on technological innovation in the field of chemistry. (This industry group has also been one of the most rapidly growing in the United States in the postwar period.) As already mentioned, the development of new plastics and their inroads upon the markets for other materials had an important influence on the growth of the *Miscellaneous manufactures* group; in turn, the supplying of the plastic resins used in the fabricating industry

has contributed to the growth record of the Chemicals and allied products group. Indeed, it is in the latter group that scientific discovery has had its most broadly based impact, as exemplified by the very substantial expansion in the production of pharmaceuticals. Increased output of synthetic detergent also added to the growth of this group, although it was partly counterbalanced by decreased output of soap, for which it is a substitute. Output of paints, varnishes and lacquers has benefited from a combination of influences—the growth of industrial demand as the production of user industries has expanded, the fact that residential building has increased more rapidly than population, the development of easy-to-use products which has encouraged painting by householders, together with the probable tendency of the home improvement market to grow more rapidly per capita than income. Changing agricultural technology, expressed in an average annual increase of 8.2 p.c. in manufacturers' tonnage sales of fertilizers to the Canadian market (excluding sales to other manufacturers) during the 1956-65 period, has been another source of growth. Synthetic rubber production, a result of scientific research, is classified to this group under the 1948 standard industrial classification and has no doubt stimulated its expansion, though output statistics on this product are not published.

The major technical innovation represented by the invention and development of television was the largest single factor accounting for the *Electrical apparatus and supplies* group occupying fourth place in postwar growth rate. The growth of television manufacturing and therefore of the Electrical apparatus and supplies group was actually rather uneven over the postwar period; manufacturers' sales of television sets, after a very steep ascent, declined somewhat after 1955 and then began climbing again in 1961. Generally, higher per capita incomes gave a broadly based stimulus to the group, as ownership of a wide range of appliances expanded; for instance, some 96 p.c. of households owned electric refrigerators in 1966 compared with 79 p.c. in 1956 and the number of households owning home freezers increased at an average annual rate of 17 p.c. in the same period. New products such as room air conditioners and, recently, electric tooth brushes were also growth features of varying importance. In addition, production of electrical and electronic products for non-consumer use was expanded, particularly of heavy electrical machinery.

The growth of the *Non-metallic mineral products* group was uneven over the postwar period; it was the fifth most rapidly expanding industry for the whole period but in the latest 10 years was in eleventh place—below the average rate of growth of all manufacturing industries. The unusual growth of the group during the earlier postwar period was attributable particularly to the rapid rise of ready-mix concrete production, a technological innovation that transferred large amounts of production activity from the construction industry to the concrete products industry and may conceivably have had some effect on the total amount of concrete used. Also of importance were such technological developments as the use of pre-cast concrete units in high-rise buildings and the apparent growth in the relative use of concrete blocks in building construction. The rise over the postwar period in per capita construction expenditures (deflated for price changes) favoured the level of activity in this industry group, and there has also been an uptrend in the use of hydraulic cement per dollar of these construction expenditures.

The sixth most rapid growth rate of the 1946-65 period was recorded by the *Tobacco and tobacco products* group. Its 6.1-p.c. rate of increase in physical volume agrees closely with the 6.6-p.c. average annual gain in cigarettes released for consumption per capita of the population. Here, a fundamental change in consumer habits, not necessarily related to higher incomes, is involved.

The *Printing, publishing and allied industries* have been subject to conflicting influences but have nevertheless obtained a growth rate of 5.3 p.c. in the postwar period,

the seventh highest among the industry groups and slightly above the growth rate for all manufacturing; in the 1956-65 period, however, the growth rate was only 4.0 p.c., significantly lower than the average for all manufacturing industries. There is an indirect, inverse relationship to the high growth rate of the Electrical apparatus and supplies industries, based especially on the introduction of television and that industry's eventual virtual saturation of the consumer market with television sets. This led to heavy inroads on the advertising revenues of the printing and publishing industry, serving to lower its growth rate for the latest 10 years and for the whole postwar period. The industry group, of course, also contains much production oriented to non-consumer users of printed matter, business forms and the like, and this market has been supported by the upward movement of over-all business activity.

Output expansion of the *Iron and steel products* group over the postwar period was at almost the same rate as that of manufacturing industries as a whole; in the 1956-65 period, it exceeded that of all manufacturing. These trends reflect growth in primary iron and steel production and in that part of the iron and steel using industries included in this industry group under the 1948 standard industrial classification. Some comments on the primary iron and steel industry and the sheet metal industry are given on pp. 673-674; the industry group also includes the household, office and store machinery industry, which benefited from the impact of higher consumer incomes on sales of certain household appliances. The primary iron and steel industry, of course, also benefited from the general uptrend in consumer appliance sales, whether included in this group or in the Electrical apparatus and supplies group.

Although the growth rate of the *Textiles* group was below the average for all manufacturing for the 1946-65 period, in the 1956-65 period its average annual growth rate was second highest among the industry groups. This significant advance in the recent period was attributable to the introduction of synthetic fabrics and their rapid penetration of the textile using industries. The fluctuating share of the Canadian producer in the domestic market complicates any analysis of the growth of the textile industries—and of some other industry groups discussed here—and no attempt has been made to relate the growth rates to this consideration.

The growth rate of the *Rubber products* industries is actually tied to that of various industrial and consumer uses of rubber besides the demand represented by motor vehicle tires. However, it is interesting to note that the growth rates for the Rubber products group for both the 1946-65 and 1956-65 periods match almost exactly those of the Transportation equipment group, which includes the motor vehicle industry. In any event, the acceleration of motor vehicle production in recent years has contributed to the increase noted in the growth of the Rubber products group, not only through the equipping of new cars but also through the large replacement market that has developed from the expansion of ownership of motor vehicles.

The *Paper products* group, one of the largest in dollar value, is dominated by the export of newsprint and pulp and its growth rate is correspondingly influenced by these export markets. Although the effect of the television broadcasting industry on printed media advertising and the market for newsprint has had some dampening influence on the expansion of the Paper products group, its growth has been relatively steady. Some production of hardboard is classified to this group and the changes in technology increasing the use of this product class have had some favourable effect.

The *Transportation equipment* group owes its growth rate over the postwar period to at least three outstanding factors—the rise in per capita car ownership; the increasing share of trucking in goods transportation, mentioned in connection with the Petroleum and coal products and the Rubber products groups; and the strong rise in the earlier postwar

period of the Aircraft and parts industry. It has thus been particularly affected by higher consumer incomes, competitive shifts in freight transportation and the defence effort. The same changes that have favoured truck production, however, have adversely affected the railway rolling-stock industry. Shipbuilding activity has been subject to a combination of influences but especially to the rise of this industry in countries with lower wages.

The relatively low over-all growth rate of the *Foods and beverages* group, which represents a large universe of rather diverse individual industries, can be explained by the fact that per capita expenditure on food tends to rise less rapidly than per capita real income. The sub-group of food industries has increased its physical output at an average rate of 3.6 p.c. a year over the 1946-65 period, exactly the same growth rate as that applying to total personal expenditure on food, adjusted for price changes. This is less than the 5.0-p.c. growth rate of the beverage industries, more favoured by the uptrend in consumer purchasing power. Both categories have, of course, increased on a per capita basis since population grew at a rate of only 2.6 p.c. over the period. There has been some trend toward consumption of food in more highly processed forms, which has assisted the food manufacturing industries. This has resulted from higher incomes and, probably, from the increasing numbers of housewives entering the labour market, both factors favouring the increased substitution of factory preparation of food for preparation in the kitchen. This reached its ultimate form in the pre-cooked frozen dinner, which is part of an important technological development, frozen foods.

The growth of the *Non-ferrous metal products* group has been relatively stable at 3.8 p.c. a year for both the postwar period and the latest 10 years, although there has been year-to-year fluctuation with the business cycle. The industry group includes both the primary metal and the metal fabricating industries. As will be seen from the statement on p. 674, the smelting and refining industry, influenced largely by the export market, grew at a faster rate than the group as a whole for the 1946-65 period—4.2 p.c. a year.

Because the *Wood products* group is strongly influenced by exports, particularly to the United States, the dominant influence on its growth over the postwar period has been the rate of growth of the North American market for lumber. This market was somewhat adversely affected by the rapid rise of the plywood industry in the United States, which made some inroads on the lumber requirements in that country. (Tariffs discourage export of Canadian plywood to the United States in large quantities.) However, in recent years the Canadian industry has increased its share of the United States lumber market. The output of the furniture industry has had about the same postwar rate of growth as dwelling unit completions, although it should be noted that the industry also includes non-household furniture and non-wood products.

The *Clothing* and the *Leather products* groups were in the lowest range of growth rates for both the 1946-65 and the 1956-65 periods. This ranking is consistent with experience in various countries of the world, that per capita consumption of these products grows less rapidly than per capita real income. These industries are also subject to import competition, the effect of which, as noted earlier, has usually not been assessed in these analyses. The average annual growth of the Leather products industries has been more rapid in the latest 10-year period, following the marked decline that had taken place in the years immediately following World War II.

All industry groups which grew more rapidly than manufacturing as a whole over the 20-year period were characterized by a faster rate of expansion during the earlier postwar period than during the later postwar period. On the other hand, most of the other industry groups grew more rapidly during the 1956-65 period than during the earlier period.

**Individual Industries.**—To provide a more detailed but less comprehensive impression of forces affecting the industrial structure over the postwar period, the following statement shows growth rates for the 1946-65 period for various individual industries. These include industries for which indexes of physical volume of production are regularly published and which, over this period, might be characterized as having "high" growth rates, i.e., growth rates exceeding that of manufacturing as a whole, or as having "moderate" growth rates, i.e., those exceeding the growth rate of the population (2.6 p.c. a year) but not that of manufacturing as a whole. Almost all published indexes for individual industries are included, since only a very few such indexes indicate a declining trend in physical output per capita of the country's population.

Opposite these individual industries are comments on particular factors making contributions to the growth of the industry. These are not exhaustive examinations of the subject but merely point up the more conspicuous highlights of the forces stimulating growth of the industry. Again, no attempt has been made to assess the effect of import shares of the Canadian market, although fluctuations in these might be important in some industries.

<i>Industry</i>	<i>Average Annual Growth</i>	<i>Some Factors Contributing to Growth</i>
	p.c.	
<b>High-Growth Industries—*</b>		
Concrete products.....	15.8	Technological change: rise of ready-mix concrete production, with transfer of activity from construction industry to manufacturing; wider use of concrete blocks, precast units, etc.
Telecommunication equipment.....	13.1	Technological innovation, especially introduction of television (rise in industry production not as high as postwar average for recent years).
Acids, alkalis, salts and fertilizers.....	9.8	Technological change: new products, including increased use of fertilizers in agriculture.
Petroleum products.....	9.2	Higher living standards leading to wider ownership of passenger cars; larger share of trucks in inter-city goods transportation; increased use of fuel oil for heating; dieselization of railways.
Refrigerators and appliances.....	8.9	Higher living standards leading to wider ownership of consumer appliances; technological innovation, new products.
Veneers and plywoods.....	8.4	Technological change in construction industry, partly exploiting earlier technological advance in development of waterproof resins for bonding plywood.
Synthetic textiles and silk.....	8.2	Technological innovation, new products; large impact from scientific research.
Hydraulic cement.....	7.8	Heavy fixed capital formation in the Canadian economy, extensive engineering construction; some apparent displacement of competitive material.
Aircraft and parts.....	7.4	Rise of aircraft production for defence early in postwar period; later trend not similar although production still at a high level.
Primary iron and steel.....	6.8	Growth of using industries, i.e., motor vehicles, pipeline construction, building construction, etc.
Motor vehicles.....	6.2	Higher living standards leading to wider ownership of passenger cars; increased share of trucking in inter-city goods transportation.

\* Industries in which growth rate exceeded the average for all manufacturing.

<i>Industry</i>	<i>Average Annual Growth</i>	<i>Some Factors Contributing to Growth</i>
	p.c.	
<b>High-Growth Industries—* concluded</b>		
Sheet metal products.....	5.9	Increases in use of wide variety of products and new products, i.e., architectural and ornamental metal in buildings and pressure cans in packaging.
Distilleries.....	5.6	Rising population, incomes and per capita consumption of distilled liquors in U.S. export market, with increased market share for imports there. Rising incomes have also favoured per capita domestic consumption.
Carbonated beverages.....	5.6	Higher living standards, faster rise in younger age groups than in total population.
Motor vehicle parts.....	5.4	Increase in motor vehicle production causing growth of both original equipment and replacement markets. Same influences as on motor vehicle production.
Heavy electrical machinery.....	4.9	Heavy investment in electrical utilities accompanying rising population and increased per capita use of electricity.
<b>Moderate-Growth Industries—†</b>		
Dairy products.....	4.6	Higher per capita income has favoured per capita consumption of some products.
Miscellaneous foods.....	4.6	In early postwar period, legalization of margarine.
Machinery.....	4.4	Has kept pace with growth rate of real domestic product for same period—also 4.4 p.c.; outstripped business expenditures on equipment for gross fixed capital formation, which grew 3.7 p.c. per year, excluding price changes. Benefits to Canadian manufacturers from mechanization of farming throughout North America.
Breweries.....	4.4	Higher per capita income.
Iron castings.....	4.3	Rapid growth of pipe manufacture for pipelines in mid-1950s (steel pipe classified to this industry even though not cast).
Furniture.....	4.3	Dwelling completions rose 4.4 p.c. per year over same period (though correlation of year-to-year changes in furniture output with completions is low and furniture includes non-household types).
Smelting and refining.....	4.2	Growth of export markets; especially, per capita manufacturing production in U.S.
Pulp and paper.....	4.0	Growth of income in export markets (however, depressing effect from rise of television broadcasting industry in U.S. and Canada).
Canning and processing.....	3.5	Rising per capita income; technological impact from development of frozen foods.
Sawmills.....	3.1	Increase in share of U.S. lumber market in recent years (but some of long-term growth of that market lost to U.S. plywood industry).
Meat products.....	3.1	Population growth, but higher incomes have switched demand to beef. (This industry does not cover all poultry processing, which rose sharply over this period.)
Grain mills.....	2.8	Technological change; expansion of use of prepared feeds and concentrates by farmers. (This kept the industry just ahead of population growth, as flour exports declined and domestic flour shipments rose little over period.)

\* Industries in which growth rate exceeded the average for all manufacturing.

† Industries in which growth rate exceeded that of population but fell below the average for all manufacturing.

Individual industries where the physical volume of production increased less rapidly than population during the 1946-65 period were: bakery products (2.5 p.c. a year); domestic clay products (2.4 p.c.); brass and copper products (2.3 p.c.); boots and shoes (2.0 p.c.); cotton goods (1.7 p.c.); and shipbuilding and repair (0.3 p.c.). Two regularly published individual industry indexes showed declining trends over the postwar period: wool goods (-1.1 p.c.) and railway rolling-stock (-3.3 p.c.).

## Section 2.—Exports of Manufactured Goods

It will be observed in the statement on p. 668 that the industry groups well known for exporting a substantial proportion of their output—Paper products, Non-ferrous metal products, and Wood products—were not among those growing more rapidly than manufacturing as a whole over the postwar period. But, as already mentioned, the manufacturing industries appear to have approximately maintained the proportion of their production which is exported and, in very recent years, there has been a marked uptrend in exports of highly manufactured goods.

In stating that the ratio of exports of manufactured goods to manufacturers' shipments has been maintained, the first three postwar years are excluded from consideration because exports of manufactured goods were abnormally high in the unusual conditions of that period. However, in the years since then, exports of fabricated materials and end-products (approximately equivalent to exports of manufactured goods) were equal to the following percentages of the value of manufacturers' shipments of goods of their own manufacture:—

	p.c.		p.c.		p.c.
1949.....	15.8	1955.....	15.3	1961.....	15.5
1950.....	15.7	1956.....	14.4	1962.....	15.3
1951.....	16.2	1957.....	14.4	1963.....	15.4
1952.....	16.5	1958.....	14.1	1964.....	16.6
1953.....	15.1	1959.....	14.1		
1954.....	15.4	1960.....	15.0		

There are some discontinuities in the shipments figures used above but the effect on the percentages is not great. However, for the 1949-55 period, the annual percentages averaged 14.6; for the 1956-60 period, 14.4; and for the 1961-64 period, 15.7.

As for exports of manufactured goods (deflated for price changes), the following statement shows the average annual percentage increases in the physical volume of different classes of exports over specified periods:\*

	<i>Annual Averages</i>		
	<i>1946-65</i>	<i>1956-65</i>	<i>1961-65</i>
	p.c.	p.c.	p.c.
Crude materials.....	6.3	5.4	8.1
Manufactured goods—†			
Fabricated materials.....	3.9	4.9	6.7
End-products.....	1.1	11.5	21.9
ALL DOMESTIC EXPORTS.....	4.1	6.0	9.5

The recent strong upward movement in exports of end-products is conspicuous; machinery and other highly manufactured goods have figured strongly in these increases.

\* These growth rates are derived from data of the External Trade Division of the DBS (see Chapter XXII on Foreign Trade).

† The classes shown are approximately equivalent to exports of manufactured goods.

### Section 3.—Trends in Principal Statistics, 1957-64

When the revised (1960) standard industrial classification was introduced, previously published statistics for the 1957-59 period were re-compiled on the same basis. Thus, with the publication of 1964 data, eight years of principal statistics of the manufacturing industries became available under the revised classification system. As the reader may find some value or interest in trends revealed by these eight years of statistics, average annual rates of change are included in this Section for a selection of series.\* The 1957-64 period is not represented as having any special advantages for the measurement of trends—it is simply the longest period available for all the industry groups of the revised classification. The dollar figures, of course, include the effect of price changes, so that these trends are not "growth rates" in the sense of measuring the physical volume of the industries involved; postwar growth rates of the physical volume of various manufacturing industries, using the 1948 standard industrial classification, are discussed in Section 1, pp. 673-675.

Table 1, which shows the year-to-year percentage changes in the value of shipments of goods of own manufacture for the period 1957-65 as well as the changes over the periods 1957-64 and 1961-64, makes possible the ready identification of years of greatest or least increase during the period or a comparison of various industry groups as to relative changes in particular years; increases for 1965 over 1964 are based on preliminary 1965 figures from a monthly survey.†

Table 2 shows the average annual percentage changes in various statistics of manufacturing activity for the 1957-64 period and Table 3 gives another selection of average annual percentage changes for the 1961-64 period, covering both manufacturing activity and total activity. The introduction in 1961 of the measurement of total activity, i.e., the inclusion of the non-manufacturing activity of manufacturing establishments, made a substantial change in the content of statistics on total employees and total salaries and wages compared with previous years, so that these statistics are included only in the 1961-64 table. The 1961-64 period possesses some intrinsic interest since the latest expansionary phase of the business cycle began in early 1961 and continued through 1964. The ranking of the industry groups in Table 3 reflects in considerable degree their susceptibility to variation in activity with fluctuations in the business cycle. (Thus, of course, these average annual rates of increase are not representative of long-term rates of increase.)

Over the 1946-64 period, the value of shipments of goods of own manufacture of all manufacturing industries increased at an average annual rate of 6.7 p.e.

\* Average annual percentage rates of change have been calculated by the least squares of logarithms method. For certain annual Census of Manufactures data, the series were "spliced" to adjust them for certain discontinuities before carrying out the computations.

## Section 4.—Statistics of Manufacturing

## Subsection 1.—Major Historical and Current Statistics of Manufacturing

Statistics on manufacturing in Canada have been collected since 1870, originally in connection with the decennial or quinquennial censuses for the period 1870 to 1915 and, since 1917, through the annual Census of Manufactures. Although every effort has been made to maintain comparability in the statistics since 1917, as shown in Table 4, changes in coverage of industries, type of data collected and the method of its treatment have inevitably introduced discontinuities or lack of comparability in certain components. One such major change in concept occurred in 1952 when the gross value of products was replaced by the value of factory shipments. More recently, the introduction of the revised standard industrial classification in 1960 and the new establishment concept in 1961 led to a break in continuity with previous years. An indication of the effects of these revisions in classification and concept is given in Table 4 where statistics for the 1957-59 period are given on both the 1948 standard industrial classification and manufacturing activity concept and the revised (1960) standard industrial classification and new establishment concept. Under the latter concept, a manufacturing establishment (i.e., one whose major activity is manufacturing) is the smallest reporting unit capable of reporting all of the following: materials and supplies used, goods purchased for resale as such, fuel and power consumed, number of employees and their pay, inventories, and shipments or sales.

The introduction of the total activity concept in 1962 and its application to 1961 data produced a considerable amount of data on non-manufacturing activities of manufacturing industries and has resulted in the transfer of statistics on some items, such as office and administrative workers and working owners and partners, from manufacturing to total activity. Table 5 sets out summary statistics for manufacturing activity and total activity for 1961-64. It should be noted that the 1961 data in Table 5 are not directly comparable with those for the same year in Table 4.

## 4.—Summary Statistics of Manufactures, 1917-61

NOTE.—Figures for intervening years from 1918 to 1949, not included in this table, are given in the 1962 Year Book, p. 616. Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a basis comparable to the series given below; statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

Year	Estab- lish- ments	Employees <sup>1</sup>	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture <sup>2</sup>	Value of Shipments of Goods of Own Manufacture <sup>3</sup>
BASIS: INDUSTRIAL CLASSIFICATION IN USE PRIOR TO 1960						
	No.	No.	\$'000	\$'000	\$'000	\$'000
1917.....	21,845	606,523	497,802	1,539,679	1,281,132	2,820,811

## 4.—Summary Statistics of Manufactures, 1917-61—concluded

Year	Estab- lish- ments	Employees <sup>1</sup>	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture <sup>2</sup>	Value of Shipments of Goods of Own Manufacture <sup>3</sup>
BASIS: REVISED STANDARD INDUSTRIAL CLASSIFICATION AND NEW ESTABLISHMENT CONCEPT						
	No.	No.	\$'000	\$'000	\$'000	\$'000
1957.....	33,551	1,340,948	4,778,040	11,698,789	9,454,954	21,452,343
1958.....	32,446	1,272,686	4,758,614	11,630,825	10,154,277	21,434,815
1959.....	32,075	1,287,809	5,030,128	12,339,558	10,371,284	22,830,827
1960.....	32,852	1,275,476	5,150,503	12,451,637	10,682,138	23,279,804
1961.....	32,415	1,264,946	5,231,447	13,127,708		24,243,295

<sup>1</sup> Includes working owners and partners.<sup>2</sup> For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.<sup>3</sup> Prior to 1952, gross value of products.<sup>4</sup> A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.<sup>5</sup> Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.

## 5.—Summary Statistics of Manufactures, 1961-64

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts. Figures in this table include poultry processors, book publishers, electroplating establishments, dental laboratories, and prescription branches in the ophthalmic goods manufactures industry, not included in Table 4.

MANUFACTURING ACTIVITY <sup>1</sup>								
Year	Estab- lish- ments	Production and Related Workers			Cost of Fuel and Elec- tricity <sup>2</sup>	Cost of Materials and Supplies Used	Value of Shipments of Goods of Own Manu- facture	Value Added
		Number	Man- Hours Paid	Wages				
	No.		'000	\$'000	\$'000	\$'000	\$'000	\$'000
1961.....	33,357	939,413	1,968,163	3,532,943	516,409	12,579,798	23,438,956	10,434,832

<sup>1</sup> Conceptually identical to previous years.  
<sup>2</sup> Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manu-  
facturing activity.  
<sup>3</sup> Includes production and related workers, administrative and office employees, sales, distribution and other employees.  
<sup>4</sup> Value of total  
shipments and other operational revenue less total cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all adjusted  
for inventory changes where required.

<sup>5</sup> Confidential.

<sup>6</sup> Incorporates revised basis of valuation for smelting and refining.

7. Summary Statistics of the Forty Leading Industries, 1961  
(Ranked according to value of shipments of goods of own manufacture)

<sup>1</sup> Conceptually identical to previous years.<sup>2</sup> Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manufacturing activity.<sup>3</sup> Includes production and related workers, administrative and office employees, sales, distribution and other employees.<sup>4</sup> Value of total shipments and other operational revenue less total cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all adjusted for inventory changes where required.<sup>5</sup> Confidential.<sup>6</sup> Revised basis of valuation.<sup>7</sup> Value of production, rather than value of shipments of goods of own manufacture, is shown.

A gear blank, 30 in diameter, being milled in a Mo engineering plant. This is the largest boring and drilling machine in Canada.

A complex of electrolytic cells produces chlorine gas and liquid caustic soda in a large new co-operative plant near Saskatoon, Sask.

### Volume of Manufacturing Production

Since manufacturers' selling prices change and since production from other industries (and countries) is embodied in Canadian factory shipments, a measure of fluctuations and long-term growth in the physical volume of production within the Canadian manufacturing industry itself is desirable. Such a measure of volume, or real domestic production, is provided by the index of manufacturing production. This index differs from current statistics on the gross value of factory output in two important ways besides the exclusion of price change—it uses the 1948 rather than the revised 1960 standard industrial classification and it is designed to represent net production. The indexes in Table 8 represent a substantial revision to those published earlier. (For an examination of postwar rates of growth in these indexes, see Section 1, pp. 665-672.)

Electric stoves on the assembly line, nearing completion. The 321,000 electric stoves shipped from Canadian factories in 1966 had a value of nearly \$46,000,000.

The snowmobile industry had its best year in 1966-67 when Canadian sales reached an estimated 50,000. About 15 plants manufacture snowmobiles in Canada, nine of them in Quebec.

The food processing industries, which are varied and numerous, have undergone considerable change in recent years. Here beans are inspected at an Ontario cannery after they have been trimmed in revolving drums.

<sup>1</sup> Durable manufactures; other groups are non-durable.

## Industry Selling Price Indexes

The most comprehensive, regularly published estimate of price changes in manufacturing is an unweighted average of industry selling price indexes which is issued monthly. There are currently 102 such indexes, each based on prices of a representative "basket" of products of a particular manufacturing industry. (They thus relate to gross rather than net production as defined in connection with the volume of manufacturing production.) Although the average of these is not a scientific, weighted measure of price changes in manufacturing, it gives some over-all indication of the direction and extent of price movements. The unweighted annual average of industry selling price indexes (1956 = 100) is as follows for years which they have been issued:—

1956.....	100.0	1960.....	102.7	1964.....	108.2
1957.....	101.7	1961.....	103.0	1965.....	109.1
1958.....	101.4	1962.....	104.1	1966.....	111.8 <sup>p</sup>
1959.....	102.4	1963.....	106.7		

Subsection 2.—Distribution of Manufacturing by Province  
and by Metropolitan Area

## Distribution by Province

Ontario and Quebec together accounted for 81.3 p.c. of the value added by manufacture in Canada in 1964—Ontario for 52.2 p.c. and Quebec for 29.1 p.c. British Columbia was responsible for 8.4 p.c., the Prairie Provinces for 6.7 p.c., and the Atlantic Provinces for 3.6 p.c. In Ontario, value added by manufacture averaged \$1,073 per capita of the population, in Quebec \$708, in British Columbia \$635, in the Prairie Provinces \$271 and in the Atlantic Provinces \$249; these averages compare with a national average of \$704.

Alberta.....	1961	54,532	103,233	17,342	573,277	935,462	343,822	802	2,669	36,913	167,980	357,345

<sup>1</sup> Conceptually identical to previous years.<sup>2</sup> Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manufacturing activity.<sup>3</sup> Includes production and cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all shipments and other operational revenue less total cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all adjusted for inventory changes where required.<sup>4</sup> Confidential.<sup>5</sup> Pulp and paper mills only; publication of these figures was authorized by the firms concerned.<sup>6</sup> Petroleum refineries only; data for two establishments included in "Industry groups for which data cannot be published".<sup>7</sup> Incorporates revised basis of valuation for smelting and refining.<sup>8</sup> Petroleum refineries only; data for three establishments included in "Industry groups for which data cannot be published".

Coil steel passing through an automatic shearing machine. A single button on the electronic programming panel activates the complete shearing cycle, producing the required number and size of sheets.

### Distribution by Metropolitan Area

The 16 census metropolitan areas\* for which manufacturing statistics are given in Table 10 accounted in 1964 for manufacturing value added of \$8,019,000,000 and shipments of goods of own manufacture of \$18,125,000,000; the former was 59.2 p.c. and the latter 58.7 p.c. of the respective totals for all Canadian manufacturing industries. The proportions of total employees and of salaries and wages accounted for by these metropolitan areas were slightly lower. They had 855,716 employees, including those in non-manufacturing activity which was 57.4 p.c. of the total for Canada, and they paid total salaries and wages of \$4,073,000,000 to these employees, or 57.5 p.c. of the total.

Approximately half (51.1 p.c.) of all value added by manufacture in Canada was accounted for by the seven largest metropolitan areas, as ranked by the value of their shipments of goods of own manufacture. In descending order these were: Toronto, Montreal, Hamilton, Vancouver, Windsor, Winnipeg and Kitchener. These areas accounted for 50.4 p.c. of the shipments of goods of own manufacture, 49.7 p.c. of total employees and 50.1 p.c. of total salaries and wages of Canada's manufacturing industries.

\* As defined for the 1961 Census of Population; see DBS publication *1961 Census of Canada—Population: Incorporated Cities, Towns and Villages* (Catalogue No. 92-535). These areas are in some cases substantially larger than metropolitan areas defined for other purposes.

<sup>1</sup> Conceptually identical to previous years.<sup>2</sup> Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manufacturing activity.<sup>3</sup> Included with administrative and office employees in the manufacturing series published in previous years.<sup>4</sup> Value of total shipments and other operational revenue less total cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all adjusted for inventory.

### Subsection 3.—Size of Manufacturing Establishments Based on Employment and Shipments

#### Size Based on Employment

About one half, or 50.6 p.c. of all persons employed in Canada's manufacturing industries in 1964 worked in establishments employing 200 or more persons; about one fifth, or 18.5 p.c., worked in establishments employing 1,000 or more. There were 127 establishments employing 1,000 or more, all but 18 of them in Ontario and Quebec; of these 18, 12 were in Western Canada and six were in the Atlantic Provinces.

The cyclical upswing in business activity which began in 1961 and continued through 1964 tended to increase business volume for manufacturing generally and was especially favourable to certain industries characterized by large plants; this cyclical stimulus combined with long-term growth of the manufacturing industries to shift these employment breakdowns in an upward direction. Thus, establishments employing 1,500 or more increased their employment by almost 14 p.c. between 1961 and 1964, as against a decrease of 12 p.c. in the employment of establishments employing fewer than 200; these comparisons refer, of course, to statistical size-classes as such, not identical groups of plants in the two years.

## Size Based on Shipments

Although the average value of shipments of manufacturing establishments throughout Canada in 1964 was somewhat less than \$1,000,000, those with shipments of more than \$1,000,000 accounted for 84.7 p.c. of all shipments of goods of own manufacture. There were 4,556 manufacturing establishments with shipments valued at more than \$1,000,000 and, of these, 3,515 or 77.2 p.c. were in Ontario and Quebec, 420 or 9.2 p.c. were in the Prairie Provinces, 415 or 9.1 p.c. were in British Columbia, and 206 or 4.5 p.c. were in the Atlantic Provinces.

## Section 5.—Federal Assistance to Manufacturing

The federal Department of Industry was established in July 1963, to promote the growth, efficiency and improvement of manufacturing industries in Canada. The Department assists Canadian industries to adapt to technological changes and variations in domestic and export market; it aids potentially sound industries to overcome problems of growth and development and promotes industrial research, development and design activity.

**Automotive Program.**—The Canada-United States Agreement on Automotive Products, signed by Prime Minister Pearson and President Johnson on Jan. 16, 1965, provides for the removal of tariffs and other impediments to trade between the two countries in motor vehicles and original equipment parts. The basic objective of the plan is to provide access to expanded markets for Canadian motor vehicle and component producers. By increased production and specialization, they will be in a position to expand trade and employment and to improve the productivity and efficiency of the industry. In order to enable Canadian vehicle and parts producers to achieve these objectives, a number of important features were incorporated into the program. The most important of these was the undertaking of Canadian motor vehicle manufacturers to expand very considerably Canadian production by the end of the 1968 calendar year.

As a result of the new program, Canada is producing an increasingly larger share of the total North American output of vehicles and components. Canadian exports of vehicles and parts and employment in this industry have increased substantially since the implementation of the program and new investment in additional plants and expansions to existing facilities have been extensive.

**Adjustment Assistance (for Firms in the Automotive Parts Industries).**—The Automotive Program offers increased opportunities to Canadian automotive parts manufacturers for expanded production, rationalization of output and reduced costs. In order to take advantage of these opportunities, Canadian parts makers must engage in substantial re-equipment and plant expansion programs. The Adjustment Assistance Program has been established to make term loans available to automotive parts manufacturers for the financing of the acquisition, construction, installation and modernization of facilities or machinery and for use as working capital.

A program of tariff remissions on imported machinery and equipment was also introduced in order to further assist the automotive parts producers to expand and modernize productive facilities. The tariff remissions cover machinery and equipment used in the production of original equipment automotive parts, accessories and tooling when such machinery and equipment are not available from Canadian manufacturers in time to meet production schedules.

**Industrial Design.**—Industrial design is becoming increasingly important to the successful development and marketing of manufactured products and to assist Canadian manufacturers in adopting sound design practices, the Department of Industry has initiated a comprehensive design program. The four main areas of design activity under the program are: design promotion in industry; research and product development; design education; and design information.

The National Design Council advises the Minister of Industry on programs to promote and assist the improvement of design in Canadian manufactured products. The Council's administrative arm, the National Design Branch, develops and implements approved design programs to stimulate design education and the application of good design techniques in industry.

Projects were sponsored in 1966 in co-operation with industry associations to encourage the creative use of wood, structural steel and concrete, as well as to recognize good design in the products of Canadian appliance manufacturers. A major program, Canada-Design '67 initiated in March 1965, recognized well-designed Canadian products required to construct, furnish and equip Centennial and Expo 67 projects. Promotion of these products was conducted through displays, press publicity, specification tearsheets and through two Design '67 Catalogues which have been distributed to principal buyers in Canada and abroad.

Continuing activities by the Council include the operation of the Design Centre in Toronto, which is a focal point for product and design promotion; the Design Index, a

reference system containing information about well-designed products and the Canadian Register of Designers which provides data to industry on designers and design services. A Design Centre will be established in 1967 in Montreal.

**Area Development Program.**—The area development program fosters economic development in designated areas characterized by high chronic unemployment, slow employment growth and serious problems of underemployment as measured by low non-farm family income. Several financial incentives designed to assist new and expanding manufacturing and processing industries in the designated areas are available including a three-year income tax abatement on capital grants for new machinery and buildings, as well as special depreciation rates on new machinery, equipment and buildings. The three-year tax abatement measure expires Mar. 31, 1967.

The program embraces large regions of the country, in all ten provinces, with 65 Canada Manpower Centre areas and 16 counties and census divisions being designated. The program covers areas comprising approximately 16 p.c. of the labour force. Since the inception of the program in December 1963, more than 600 firms have indicated their intention to establish new or expanded facilities in designated areas and to invest more than \$1,250,000,000. More than 41,000 new jobs were to be provided directly by these factories as well as a similar number of additional jobs associated with supply and service industries.

**Program for the Advancement of Industrial Technology.**—In 1965 the Department of Industry initiated a Program for the Advancement of Industrial Technology (PAIT) to stimulate industrial growth by the application of science and technology to the development of new or improved products and processes. The basic aim of the program is to help industry upgrade its technology and expand its innovation activity by underwriting specific development projects that involve a significant advance in technology and which, if successful, offer good prospects for commercial exploitation. PAIT is essentially a form of "development insurance" with the Government sharing the financial risk of the development with the sponsoring company.

PAIT assistance is available to individual Canadian companies or groups of Canadian companies for developmental projects to be carried out and exploited in Canada. Companies are expected to have the capabilities and facilities to undertake the development work and also to provide for the manufacture and sale of the resulting products in both domestic and export markets. This program is designed to increase the technical competitiveness of Canadian industry and is also intended to help create an industrial environment attractive to Canada's best-qualified scientific, technical and managerial personnel.

Sixty-six Government-assisted development projects, representing a total effort of approximately \$25,500,000, have been undertaken by Canadian firms since the inception of the PAIT program.

**Defence Product-Development Assistance.**—In the year since November 1965, new commitments totalling approximately \$17,000,000 were made under the Defence Development Assistance Program to foster the growth of a development capability in Canadian industry in support of the Production-Sharing Program. The projects supported under the program to meet present or anticipated requirements of military services of the United States and other allied governments included: Helicopter Logistic Devices at Okanagan Helicopters (Vancouver); Air Transportable Maintenance Shop at ATCO (Calgary); Black Brant Family of Rockets at Bristol Aerospace (Winnipeg); Tilt Wing Aircraft at Canadair (Montreal); High Frequency Sounding Equipment at EMI Cossor (Halifax); Xenon Light Sources at Atlantic Films (St. John's, Newfoundland); the Twin Otter Aircraft Turbinization Project at de Havilland (Toronto); the OT-4 Stationary Gas Turbine Engine at Orenda (Toronto) and Parachute Developments at Irvin Airchute (Fort Erie). For the year ended Mar. 31, 1967, the Government approved a cash authorization of \$25,000,000 for this program.

**Shipbuilding Construction Assistance.**—During 1966, the Federal Government continued its program of encouraging a self-sustaining and efficient shipbuilding industry. The program included examination of financial measures in support of shipbuilding and the application of general assistance plans administered by the Department of Industry.

The industry responded effectively during the year to the policy of national competition for government shipbuilding requirements. Similarly, the industry made active use of the subsidy program for commercial vessels which provides a subsidy rate of 25 p.c. for vessels, other than fishing trawlers, for the period 1966-69, after which time it will be reduced by 2 p.c. each year until a rate of 17 p.c. is reached in 1972. The current subsidy rate of 50 p.c. for fishing trawlers is being continued.

**Industrial Missions.**—Industrial missions concerning wood components, structural ceramics and prefabricated and pre-cast concrete were recently organized to visit industrial establishments in the United States and Europe. The purpose of these missions is to enable Canadian business men to examine and assess the latest technological developments taking place outside Canada in their particular industries. The information gained is prepared in report form and circulated to Canadian industry.

---

# CHAPTER XVII.—CAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING\*

## CONSPECTUS

	PAGE		PAGE
SECTION 1. CAPITAL EXPENDITURES ON CONSTRUCTION AND ON MACHINERY AND EQUIPMENT.....	705	SECTION 3. HOUSING.....	720
SECTION 2. CONSTRUCTION STATISTICS.....	712	Subsection 1. Government Aid to House-Building.....	720
Subsection 1. Value of Construction Work Performed.....	712	Subsection 2. Housing Activities in 1965-66.....	724
Subsection 2. Contracts Awarded and Building Permits Issued.....	717	Subsection 3. Housing Statistics of the 1961 Census.....	728

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity—value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building, construction of dwelling units and housing statistics of the 1961 Census are covered in Section 3.

## Section 1.—Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures† in all sectors of the economy amounted to \$12,798,000,000 in 1965, an increase of 16.9 p.c. over the 1964 total of \$10,944,000,000. The over-all increase resulted from a 16.7-p.c. rise in the purchase of machinery and equipment and a 17.1-p.c. increase in construction expenditures. After 1946, capital outlays in Canada increased each year to a peak in 1957. A four-year decline followed but a significant increase shown in 1962 was strengthened in the next three years. Capital spending in current dollars exceeded the 1957 peak in these years but, in constant dollars, the 1957 level was not exceeded until 1964; in that year the capital program was recorded at 8.7 p.c. above 1957 and in 1965 it was 21.0 p.c. higher. These expenditures on the expansion, modernization or renewal of the nation's production facilities are a significant indicator of the economic activity in the country; in 1965 they represented over 24 p.c. of the gross national product.

\* Except where otherwise noted, prepared in the Business Finance Division, Dominion Bureau of Statistics.

† Capital expenditure figures for 1964 and earlier years are final and those for 1965 are preliminary and subject to revision at a later date. Capital expenditures for 1964 and 1965, as well as intentions for 1966, appear in greater detail in the publication *Private and Public Investment in Canada, Outlook 1966*, available from the Queen's Printer (Catalogue No. 61-205).

As shown in Table 1, construction accounts for about two thirds of the total capital expenditures each year and machinery and equipment for about one third. Recently, there has been a slightly upward trend in the proportion of the total represented by the purchase of machinery and equipment, which rose from 32.5 p.c. in 1961 to 35.9 p.c. in 1965. The proportion for housing construction moved upward from 17.9 p.c. in 1961 to 18.5 p.c. in 1964 but dropped to 16.7 p.c. in 1965. Non-residential construction outlays dropped from 49.6 p.c. of the total in 1961 to 47.4 p.c. in 1965.

**1.—Capital Expenditures on Construction and on Machinery and Equipment, in Current and Constant (1957) Dollars, 1955-65**

All economic sectors with the exception of trade reported increased capital outlays in 1965 over 1964. The primary industries increased by \$161,000,000 or 11 p.c., of which \$92,000,000 was in agriculture and fishing. Capital expenditures in the mining industry expanded in 1964 by \$112,000,000 but by only \$55,000,000 in 1965; in the latter year, higher output for gas and oil development was offset by lower expenditures for iron ore mines. Expenditures on new manufacturing facilities were up by \$407,000,000, or 22 p.c., mainly as a result of increased outlays in the chemical industry (for production of fertilizers, plastics, caustic soda, chlorine and synthetic fibres), in the pulp and paper industry, and in the transportation equipment industry (mostly for automobile manufacture). Capital expenditures for utilities (including transportation, communication and storage, and public utilities such as gas, water and electricity) were up by \$350,000,000 or 17 p.c.; much of this increase resulted from significantly larger programs by electric power producers, railways and urban transit systems, offset partially by lower expenditures for oil and gas pipelines. The 1965 housing activity was up by \$105,000,000, a modest increase of 5 p.c. Trade, finance and commercial services increased expenditures by \$176,000,000 or 17 p.c.

Institutional services (including hospitals, schools, universities, churches and welfare institutions) increased by \$238,000,000 or 31 p.c., the sharpest rate of increase. Of the latter, \$140,000,000 was for schools, \$87,000,000 for university buildings and \$18,000,000 for hospitals; other institutions, including churches, declined by some \$9,000,000. Capital outlays by governments at all levels rose by \$370,000,000, an increase of 25 p.c. (Government departments as defined for capital expenditures purposes include the part of government activity, excluding institutions, generally dependent on tax revenues for financial support as opposed to activities directly producing revenues on a service-rendered basis.) Spendings by the federal, provincial and municipal governments increased by \$105,600,000, \$187,200,000 and \$77,200,000, respectively. The high increase at the provincial level was due mainly to expanded highway construction programs.

All provinces except Newfoundland contributed to the 1965 increase in capital spending. In Newfoundland, higher expenditures on electric power, hospital and provincial government construction were offset by a sizable decline in iron ore investments. An advance of 33.3 p.c. recorded by Prince Edward Island was almost entirely due to increased federal and provincial expenditures. Nearly one third of the 31.9 p.c. increase in New Brunswick came from an expanded program for electric power construction and another third from greater outlays by all levels of government. Increases exceeding the national average of 16.9 p.c. were also recorded by British Columbia (25.4 p.c.), Nova Scotia (22.9 p.c.), Saskatchewan (21.4 p.c.) and Alberta (17.7 p.c.). Approximately one third of the increase in British Columbia was attributed to electric power construction; somewhat less than one quarter to the manufacturing sector, pulp and paper projects being the largest contributors; and about one sixth to institutions and governments at all levels. In Nova Scotia, nearly one half of the increase resulted from expenditures of government, and to expanded programs of school, university and hospital construction; manufacturing as a group contributed more than one third of the increase, the most notable advances being in the paper products, non-metallic mineral and chemical industries. In Saskatchewan, over one third of the gain was attributable to expanded programs by governments and to increased spendings for university and school construction and about two fifths to expanded outlays in the primary industries, with investments in agriculture and fisheries, petroleum and gas wells, and miscellaneous mining making the greatest contributions. In Alberta, more than two fifths of the increase was accounted for by expenditures for petroleum and gas wells, one fifth by institutions and governments, one tenth by agriculture and fisheries and a little less than one tenth by chemical products. The rates of increase in Ontario (16.1 p.c.) and in Quebec (14.3 p.c.) were smaller than the national average but in dollar volume their increases of \$602,000,000 and \$402,000,000, respectively, were the largest, followed by British Columbia with \$329,000,000. In Ontario, two fifths of the impetus came from the manufacturing sector with investments of the chemical, transportation equipment, paper products and textile industries making the greatest contributions; a little less than one third came from the outlays of governments and of institutions, with school and university construction showing the largest gains. In Quebec, spendings by governments and spendings for school, university and hospital construction accounted for more than two fifths of the increase; expanded programs by firms in the trade, financial and commercial sector contributed just under one quarter; utilities accounted for about one fifth and manufacturing for under one tenth. There was also some decline over the year in investments for iron ore development. In Manitoba, most of the 5.9-p.c. increase came from government spendings, although there were some increases in outlays for agriculture and fisheries. It might be noted that sharp year-to-year fluctuations in capital outlays in any one province are often associated with changing phases of a few large projects.

## 2.—Summary of Capital and Repair Expenditures, by Economic Sector, 1964 and 1965

NOTE.—Actual expenditures 1964; preliminary actual 1965.

A summary of the capital expenditures in each province for the years 1964 and 1965 is given in Table 4. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, although the actual production of these assets may generate major employment and income-giving effects in other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the western provinces.

## Section 2.—Construction Statistics

### Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures that appear in Section 1. The data represent the estimated total value of all new and repair construction performed by contractors, by labour forces of utility, manufacturing, mining and logging firms, and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry. Table 5 shows the value of new and repair construction work performed during the period 1956-65 and Table 6 shows the value of such work performed by contractors and others in the years 1962-65.

## 5.—Value of New and Repair Construction Work Performed, 1956-65

NOTE.—Actual expenditures 1956-64; preliminary actual 1965.

Year	New	Repair	Total	Total Construction as Percentage of Gross National Product
	\$'000,000	\$'000,000	\$'000,000	p.c.
1956.....	5,272	1,182	6,454	21.1
1957.....	5,785	1,238	7,023	22.0
1958.....	5,831	1,261	7,092	21.6
1959.....	5,710	1,367	7,077	20.3
1960.....	5,454	1,432	6,886	19.0
1961.....	5,518	1,456	6,974	18.7
1962.....	5,787	1,509	7,296	18.0
1963.....	6,157	1,559	7,716	17.8
1964.....	7,004	1,630	8,634	18.2
1965.....	8,201	1,704	9,905	19.0

## 6.—Value of Construction Work Performed, by Contractors and Others, 1962-65

NOTE.—Actual expenditures 1962-64; preliminary actual 1965.  
(Millions of dollars)

Item	1962	1963	1964	1965
<b>Contract Construction.....</b>	<b>5,710</b>	<b>6,034</b>	<b>6,833</b>	<b>8,117</b>
New.....	4,900	5,213	5,937	7,113

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 8. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and

by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

**8.—Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1964 and 1965 with Totals for 1961-65**

NOTE.—Actual expenditures 1961-64; preliminary actual 1965. Comparable figures from 1953 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

## Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only as far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

## 9.—Value of Construction Contracts Awarded, 1946-65

(SOURCE: *Southam Building Guide*)

NOTE.—Figures for the years 1926-45 are given in the corresponding table of the 1962 Year Book, p. 682.

Year	Value of Construction Contracts	Year	Value of Construction Contracts	Year	Value of Construction Contracts
	\$		\$		\$

**Building Permits.**—The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected for more than 1,400 municipalities across the country and are available for the individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

The total value of permits issued for construction work exceeded \$3,800,000,000 for 1965, the highest figure on record and an increase of 16.6 p.c. over 1964. Residential construction was 8.8 p.c. higher, new construction and repairs being up 9.1 p.c. and 1.6

p.c., respectively. Non-residential construction increased 24.2 p.c. over 1964, with increases of 13.0 p.c. in industrial, 31.0 p.c. in commercial and 24.5 p.c. in institutional and government construction. All provinces except Prince Edward Island recorded gains in 1965, the largest percentage increase being reported by Newfoundland. Table 11 shows the value of building permits issued in each of 50 municipalities for 1964 and 1965.

### 11.—Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 50 Municipalities, 1964 and 1965

NOTE.—Comparable figures from 1966 are given in the corresponding table of previous Year Books beginning with the 1962 edition.

The indexes given in Table 14 show as far as possible the fluctuations in building costs and their effect on construction work and employment. They are designed to measure price changes of the major inputs—material and labour—but do not reflect price variations of other inputs such as engineering fees, architects' fees, construction equipment and profits. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the locality. Also, technological progress and changes in productivity might possibly affect the relative importance of the components of these price series.

**14.—Index Numbers of Prices of Building Materials, and Wage Rates and Employment in Construction Industries, 1956-65**

(A.v. 1949=100)

Year	Prices of Building Materials		Wage Rates in Construction Industries	Employment in Building Construction <sup>1</sup>

### Section 3.—Housing\*

#### Subsection 1.—Government Aid to House-Building

**Federal Assistance.**—The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918, when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as “an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions”. Central Mortgage and Housing Corporation (CMHC), a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and co-ordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and assists provinces and municipalities in many aspects of urban growth. In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities that rightfully belong to other levels of government or that could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective home owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of approximately 5,200,000 houses have been built since the first covering legislation was enacted; about one third of these were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

**Loan Insurance.**—Mortgage loans made by approved lenders may be insured for new home-ownership and rental housing and for existing dwellings in approved urban renewal areas. They are normally available from approved lenders (chartered banks and life insurance, trust and loan companies) to individual home-owner applicants, to builders constructing houses for sale or for rent, to rental investors and to special groups such as co-operative housing associations and farmers. Upon application, the borrower pays CMHC a fee of \$35 per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender requires evidence that a home owner or home purchaser is providing 5 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash or a combination of cash, land and labour; for the home purchaser it may be in cash or labour. The regulations require that gross debt service—the ratio of repayments of principal and interest plus municipal taxes

\* Prepared (November 1966) in the Information Division, Central Mortgage and Housing Corporation, Ottawa. Amendments to the National Housing Act made by SC 1966, c. 53, which received Royal Assent on Nov. 22, 1966, are not included in this presentation; see Chap. XXVII, Part V, listing federal legislation of 1966-67.

to the income of the borrower—should not exceed 27 p.c., although instances involving higher ratios may be considered on their merits. The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage; the fee ranges from  $1\frac{3}{4}$  p.c. to  $2\frac{1}{2}$  p.c. of the loan, according to type of unit and time of mortgage advances.

For home-ownership housing, loans may be up to 95 p.c. of the first \$13,000 of lending value and 70 p.c. of the balance but may not exceed a maximum of \$18,000. Loans for rental houses may be up to 85 p.c. of the lending value, subject to the same maximum loan amount. The maximum loan available for apartment multiple-family dwellings is \$12,000 per family housing unit. The period for loan repayment is usually 25 years but may be extended to 35 years if the lender agrees. Repayments are made in equal monthly instalments which include payment of interest and loan principal. The total monthly payment includes one twelfth of the estimated municipal taxes. The interest rate is prescribed by the Governor in Council; on Jan. 10, 1966, it was increased from  $6\frac{1}{4}$  p.c. to  $6\frac{3}{4}$  p.c.

*Direct Loans.*—CMHC may make direct loans for both home-ownership and rental housing where, in the opinion of the Corporation, loans are not available through approved lenders. Loans are made to any eligible home-owner applicant but direct loans to builders are subject to a requirement that the houses be pre-sold to satisfactory purchasers. Since 1963, loans not subject to pre-sale condition have been made available to support house-building during the winter months. By the end of 1965, direct lending by the Corporation totalled approximately \$2,702,203,000. The amount that may be advanced for this purpose out of the Consolidated Revenue Fund is \$3,250,000,000.

CMHC, with Government approval by Order in Council, may make loans to non-profit corporations and limited-dividend housing companies to assist in financing the construction of low-rental housing projects or in the purchase of existing buildings and their conversion into low-rental housing projects. In addition to self-contained units, developments undertaken by non-profit corporations may include hostel or dormitory accommodation for the elderly and low-income individuals. The dividends of a limited-dividend company are restricted by the terms of its charter to 5 p.c. or less of paid-up share capital. Loans may be up to a maximum of 90 p.c. of the lending value established by CMHC. The period for repayment may not exceed the useful life of the project and in any case may not be for more than 50 years. The interest rate is established by Order in Council. Plans and specifications for such projects must be approved by the Corporation as well as financing and operating arrangements.

Since December 1960, the National Housing Act has provided financial assistance for the elimination or prevention of water and soil pollution. CMHC is authorized to make a loan to a province, municipality or a municipal sewerage corporation for the construction or expansion of a central plant for the treatment and disposal of sewage wastes and the construction of one or more trunk collector sewers. The loan may not exceed two thirds of the cost of the project and the maximum repayment term is 50 years from date of completion. The interest rate is prescribed by the Governor in Council. The agreement covering the project contains a condition whereby 25 p.c. of the loan principal and 25 p.c. of the accrued interest will be forgiven for projects completed to the satisfaction of CMHC on

or before Mar. 31, 1967.\* Where construction is not completed before that date, 25 p.c. of the loan advanced or warrantable by construction progress at that date, plus 25 p.c. of the accrued interest on advances, may be forgiven.

Long-term loans to universities, colleges, co-operative associations and charitable corporations are authorized under the Act for the construction of university housing projects or the acquisition of existing buildings and their conversion into a university housing project. CMHC may lend up to 90 p.c. of the project cost, subject to maximum amounts as follows: houses, \$18,000; self-contained apartments, \$12,000 per unit; and hostels, \$7,000 per person accommodated. Term of the loan may not exceed 50 years. The interest rate is prescribed by the Governor in Council.

*Guarantees.*—CMHC is authorized to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to existing houses and apartments. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed \$4,000 for a one-family dwelling or \$4,000 for the first unit of a duplex, semi-detached or multiple-family dwelling, plus \$1,500 for each additional unit. Loans are repayable in monthly instalments, together with interest at the rate of 6 p.c., in not more than 10 years.

*Public Housing.*—Under the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families and individuals of low income or purchase and rehabilitate existing housing for this purpose. Projects may include hostel or dormitory accommodation in addition to self-contained units. The Federal Government pays up to 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Rents for units in federal-provincial projects are related to the tenant's family income and size of family and operating deficits are shared on the same contractual basis as the capital costs. The Federal Government and the government of a province may also enter into an agreement to provide for a land assembly project which involves the development of raw land for housing purposes. Such projects are financed in the same manner as federal-provincial housing projects.

As an alternative method of producing public housing, the CMHC is empowered to make long-term loans to a province, or to a municipality or public housing agency with the approval of the province, for the provision of housing accommodation. Projects may consist of new construction or existing buildings and include dormitory and hostel accommodation as well as self-contained family units. Loans may be up to 90 p.c. of the total cost as determined by CMHC and for a term as long as 50 years but not in excess of the useful life of the development. The maximum that may be borrowed for a house is \$18,000, for a fully serviced apartment \$12,000, and for hostels or dormitories \$7,000 for each person accommodated. The interest rate is set by the Governor in Council.

Federal grants may be made covering up to 50 p.c. of losses incurred in the operation of public housing projects, for a period of up to 50 years but not exceeding the useful life of the project. Loans may be made to assist proponents of public housing projects to acquire land for future projects, the maximum loan being 90 p.c. of the cost of acquiring and servicing the property.

\* Extended to Mar. 31, 1970 by 1966 amendment to the Act.

*Urban Renewal.*—Federal grants and loans are available under the Act to assist provinces and municipalities undertaking programs of urban renewal. CMHC, with Federal Government approval, may arrange with a municipality to undertake a study to identify blighted areas, determine housing requirements and provide data upon which an orderly program of conservation, rehabilitation and redevelopment can be based. The federal contribution may be as much as 75 p.c. of the cost. The legislation also authorizes federal contributions equal to one half of the costs of preparing an urban renewal scheme setting out proposals for urban renewal action, a similar cost-sharing arrangement for the implementation of a scheme, and loans up to two thirds of the provincial or municipal share of the cost of carrying out an urban renewal scheme. Loans may be for 15 years at an interest rate prescribed by the Governor in Council. To encourage the improvement and conservation of housing meeting minimum standards of construction, loans are available for the sale, purchase or refinancing of existing housing in urban renewal areas not designated for demolition.

*CMHC Building.*—The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of construction contracts—including any necessary on-site surveying and engineering. On such contracts the Corporation carries out full architectural and engineering inspections.

*Research.*—CMHC is concerned with building technology in the formulation of standards for housing construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing is concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Funds provided under the National Housing Act support the activities of the Canadian Housing Design Council, the Community Planning Association of Canada and the Canadian Council on Urban and Regional Research.

*Other Federal Legislation.*—The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see pp. 460-461); the Veterans' Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see pp. 335-336); and the Farm Improvement Loans Act, 1944 (see pp. 458-459) provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing.

**Provincial Assistance.**—All provinces have complementary legislation providing for joint federal-provincial housing and land assembly projects and, in addition, most provinces have enacted separate legislation with respect to housing. Details of such assistance may be secured from the provincial government departments listed in the Directory of Sources of Official Information included in Chapter XXVII under the heading of "Housing".

### Subsection 2.—Housing Activities in 1965-66

Housing production in Canada reached a record high in 1965. The 166,565 housing starts represented a slight increase over the 1964 total of 165,658 and completions, numbering 153,037, surpassed the previous year's volume of 150,963 by 1.4 p.c. Investment in new housing amounted to \$2,133,000,000, a gain of 5.2 p.c. over the 1964 total of \$2,028,000,000.

The increase in housing starts took place, as it has since 1962, in apartments and other rental units. Starts of apartment and row dwellings in 1965 reached 83,200 units, representing 50 p.c. of the total and an increase of 4.2 p.c. over the 79,873 units reported during 1964; in the latter year the gain was 25.6 p.c. and in 1963 it was 42.3 p.c. In urban centres, rental dwellings accounted for more than one half of all housing starts for the second successive year.

Starts of dwellings intended primarily for owner-occupancy declined by 2.8 p.c. from 85,785 in 1964 to 83,365 units in 1965. As in the two preceding years, nearly 35 p.c. of the single dwellings were started in the last three months of the year as a result of the Federal Government's winter house-building incentive program and the extended direct lending operations of CMHC. A downward trend, due mainly to a developing shortage of mortgage money, became evident in late 1965 and continued throughout 1966. For the first six months of that year, starts numbered 57,823 compared with 68,510 in the same months of 1965.

#### 15.—Dwelling Units Started and Completed, by Type of Financing, 1956-65 and by Region, 1964 and 1965

<sup>1</sup> Excludes the Yukon and Northwest Territories.

**Operations under the National Housing Act.**—NHA mortgage loans amounting to \$781,575,000 were approved in 1965 for the construction of 59,458 dwellings, compared with loans of \$729,234,000 approved for 58,136 units in 1964. Direct lending by CMHC surpassed the volume of insured loans by approved lenders operating under the Act; loans by the federal agency, involving 33,942 units, had a value of \$461,396,000. As in 1964, the highest level of direct lending by CMHC was reached in the last quarter of the year, when prospective home owners could take advantage of the \$500 bonus payment offered under the Federal Government's winter house-building incentive program.

Loans made available through private lenders in 1965 amounted to \$320,179,000 for 25,516 dwellings. With the approval of loans for 15,974 units, trust companies were the largest source of funds; lending activity by life insurance companies represented 8,529 dwellings. More than 65 p.c. of all the housing started during 1965 was financed by conventional mortgage loans, accounting for 111,723 dwelling starts compared with 110,309 in 1964.

Mortgage money was in plentiful supply during the first half of 1965, as it had been throughout most of the previous year, and in this period starts were 8.3 p.c. above the number for the corresponding months of 1964. However, after July, funds became scarce for some types of loans and were virtually unavailable toward the end of the year. The reduction in the over-all flow of mortgage funds from lending institutions led to more stringent lending terms, including an increase in interest rates. In the first half of 1966, loans were approved for the construction of 20,136 new dwellings compared with 21,733 new dwellings in the same period of 1965, a decrease of 7.6 p.c.

*Borrower and House Characteristics.*—Applicants for NHA loans in 1965 had an average income of \$6,655 compared with \$6,375 in 1964. The average income of purchasers who obtained loan assistance through approved lenders operating under the Act was \$7,063 and of those who obtained direct loans from CMHC, \$6,450. The cost of the average NHA-financed house, at \$16,531, was approximately \$700 higher in 1965 than in 1964. Down payments, including any secondary financing, averaged \$2,999 above the \$2,700 average for the previous year. For a large portion of borrowers, the \$500 bonus available under the federal winter house-building incentive program was applied to the down payment requirement. On the average, payments of mortgage principal and interest, together with taxes, represented 21.4 p.c. of the borrower's income, virtually unchanged from 1964. The average age of borrowers was 34.6 years and 58.5 p.c. of the families had one or two children. More than 71 p.c. of the borrowers were purchasing a house for the first time.

Three of every four houses constructed were bungalows, 17 p.c. were split-level dwellings and the remainder were mainly two-storey units. There was a small increase in the size of the average dwelling financed under the NHA—from 1,218 sq. feet in 1964 to 1,226 sq. feet in 1965.

*Loans to Non-profit Corporations and Limited-Dividend Companies.*—In 1965, 56 loans in an aggregate amount of \$14,213,000 were approved to non-profit corporations to assist in the construction of 1,175 self-contained units of low-rental housing and hostel accommodation for 1,293 persons. Of the total, 1,134 units were intended for occupancy by elderly people and 41 by low-income families. In 1964, 44 limited-dividend loans to non-profit housing companies and private entrepreneurs were approved for the construction of 1,861 dwellings.

*Home Improvement Loans.*—There was a slight decline in the volume of NHA-guaranteed bank loans for home improvement purposes in 1965. Loan approvals during the year numbered 18,846 for \$35,589,000 as against 19,800 and a value of \$36,000,000 in 1964. At the end of 1965, the outstanding debt on such loans was reported by the banks at \$73,200,000 compared with \$72,100,000 a year earlier. The Home Improvement Loan Insurance Fund, comprised of fees received from borrowers, increased by \$252,000 during the year to reach \$3,017,000 at Dec. 31, 1965.

*Loans for University Housing Projects.*—Loans totalling \$23,901,000 were approved in 1965 for 22 university housing projects providing accommodation for 4,547 students, a decrease from 1964 activity when assistance was authorized for developments housing 7,377 students. Loans approved in 1965 were distributed provincially as follows:—

Province	Loans		Students to be Accommodated
	No.	\$'000	
Nova Scotia.....	2	991	160
New Brunswick.....	2	1,485	426
Quebec.....	5	4,646	760
Ontario.....	10	16,104	3,020
Alberta.....	1	335	52
British Columbia.....	2	340	129

From December 1960, when university housing loans were first authorized, to December 1965, 116 loans totalling \$137,809,000 were approved for the construction of residences for 26,947 students. In June 1965, the statutory limit that may be advanced for such loans was increased from \$150,000,000 to \$200,000,000.

*Loans for Municipal Sewage-Treatment Projects.*—During 1965, 180 loans amounting to over \$27,337,000 were authorized to assist 162 municipalities to undertake sewage-treatment projects, distributed provincially as follows:—

Province	Loans		Province	Loans	
	No.	\$'000		No.	\$'000
Newfoundland.....	6	562	Ontario.....	52	11,101
Prince Edward Island.....	2	26	Manitoba.....	14	311
Nova Scotia.....	1	72	Saskatchewan.....	32	1,475
New Brunswick.....	5	306	Alberta.....	15	1,560
Quebec.....	44	11,924	British Columbia.....	9	..

From December 1960, when the Act was amended to provide assistance for sewage-treatment projects, to December 1965, 932 loans totalling \$172,285,000 were approved to 677 municipalities.

*Mortgage Marketing.*—Sales of NHA-insured mortgages amounted to \$136,400,000 in 1965 as compared with a 1964 amount of \$150,200,000. The 1965 total included \$80,800,000 in sales through three mortgage auctions held by CMHC to promote the development of a secondary mortgage market. From June 1961, when the first mortgage auction was held by the Corporation, to the end of December 1965, sales by CMHC to members of the Investment Dealers' Association of Canada, NHA-approved lenders and their approved correspondents totalled \$308,600,000. Such sales are subject to the conditions that the mortgages be resold or used as collateral for securities backed by NHA mortgages.

*Urban Renewal.*—Total federal assistance for urban renewal amounted to \$4,134,000 in 1965, compared with \$10,517,000 in 1964. Net contributions estimated at \$3,200,000 were approved for the cities of Saint John, N.B., Montreal, Que., Kingston, Ottawa and Toronto, Ont., Regina, Sask., and Victoria, B.C., for the implementation of urban renewal schemes. Those for Saint John, Kingston and Ottawa will assist in the installation of municipal works and services in projects where federal contributions for acquisition and clearance had been approved under the previous legislation. For the Kingston project, CMHC approved the first loan under a 1964 amendment to the NHA for mortgage loan assistance for existing dwellings in urban renewal areas.

Since 1955, when the urban renewal study legislation was first enacted, 75 studies have been approved in communities large and small across the country. Reports of studies undertaken by Dartmouth, N.S., Joliette, Que., Niagara Falls and Trenton, Ont., Moose Jaw, Sask., and Dawson Creek, B.C., were completed and published in 1965. During that year, more urban renewal study contributions were approved than in any other year. They totalled \$324,470 and included initial grants to the municipalities of Wabana, Nfld., Amherst, Lunenburg, Pictou and Windsor, N.S., Chomedey and Drummondville, Que., Brantford, Fort Frances, Kenora, London, St. Thomas, Timmins and Welland, Ont., Brandon, Man., Estevan, Sask, Lethbridge, Alta., and Chemainus, Natal, New Westminster and Vancouver, B.C. During 1964, five grants totalling \$68,035 were approved for this purpose.

Federal contributions totalling \$610,000 for the preparation of 26 urban renewal schemes were approved during the year, including initial contributions for the municipalities of St. John's and Corner Brook, Nfld., Amherst and Dartmouth, N.S., Moncton and Saint John, N.B., Hull, Montreal and Trois-Rivières, Que., Kitchener, London, Mount Joy, Port Arthur, Sault Ste. Marie, Sudbury and Toronto, Ont., Winnipeg, Man., Calgary and Edmonton, Alta., and Burnaby, B.C.

*Public Housing.*—Approval was given during 1965 for the development under federal-provincial partnership arrangements of public housing projects in St. John's, Nfld., Yarmouth, N.S., and Kingston and Toronto, Ont. These projects will provide a total of 324 dwelling units for low-income families and elderly persons. Since the initial project was authorized in 1950, public housing developments comprising more than 12,500 units have been approved.

Forty-seven loans amounting to \$36,100,000 were approved to Ontario Housing Corporation for loan-assisted public housing projects comprising 2,919 units. Of these, 1,601 were made up of existing units and the remainder, 1,318, through new construction. The annual 50-p.c. federal contribution toward operating losses for the projects is estimated at \$765,000.

*Land Assembly.*—Three land assembly projects were approved under federal-provincial arrangements in 1965. The developments, located at Gander, Nfld., Arnprior, Ont., and Prince Rupert, B.C., will provide a total of 662 serviced building lots. From the inception of the program in 1948 to the end of 1965, a total of 18,929 lots had been authorized for development and 12,043 had been sold.

### Subsection 3.—Housing Statistics of the 1961 Census\*

The tremendous upsurge in building construction in the 1951-61 decade is reflected in the 1961 Housing Census results† which recorded 1,145,198 more occupied dwellings in 1961 than in 1951, the total for Canada in the later year being 4,554,493. The rate of increase in occupied dwellings of 33.6 p.c. exceeded the population increase of 30.2 p.c. in the same period.

Table 18 gives a summary of housing characteristics for Canada in 1951 and 1961. In this period both owned and rented dwellings increased by about one third and single detached dwellings and apartments and flats increased at about the same proportionate rate. The median value of homes was \$11,021 in 1961 and the median monthly cash rent \$62. Almost two out of five dwellings were constructed in the postwar period, a fact reflected in part in the proportion of dwellings in need of repair, which dropped from 13.4 p.c. in 1951 to 5.6 p.c. in 1961.

\* More detailed information may be found in Vol. II (Part 2) of the 1961 Census (Catalogue Nos. 93-523 to 93-535).

† Based on a 20-p.c. sample of occupied dwellings across Canada. A dwelling, for census purposes, is a structurally separate set of living quarters with a private entrance either from outside the building or from a common hall or stairway inside. The entrance must not be through anyone else's living quarters.

<sup>1</sup> Exclusive of the Yukon and Northwest Territories.  
<sup>2</sup> Figures relate to owner-occupied, single detached, non-farm dwellings only.

<sup>3</sup> Figures relate to owner-occupied, single detached, non-farm dwellings only.

<sup>4</sup> Figures relate to non-farm dwellings only.

Among the provinces, Alberta had the largest proportionate gain over 1951, recording an increase of 39.5 p.c. and 99,059 dwellings; Ontario was first numerically with 459,625 more dwellings in 1961 than in 1951, an increase of 38.9 p.c. Saskatchewan had the largest proportion of the single detached type in 1961, 85.7 p.c. of its occupied dwellings being in that category. On the other hand, 49 p.c. of Quebec's dwellings were apartments or flats, the highest among the provinces. The largest homes were in Prince Edward Island where they had an average of 6.4 rooms and 3.3 bedrooms. The smallest were in British Columbia and the Prairie Provinces where they averaged 4.9 rooms and 2.4 bedrooms (2.5 bedrooms in Saskatchewan). Crowded homes (those in which the number of persons exceeded the number of rooms) were most in evidence in Newfoundland where about three out of ten were thus classified. The proportion of such homes was lowest in Ontario at 11.8 p.c.

Among the metropolitan areas, Vancouver, Victoria and Windsor had the largest proportion of single detached type dwellings in 1961, with 75.0 p.c. of their homes in that category; 69.8 p.c. of Montreal's dwellings were apartments or flats, the highest proportion for this group. Largest homes, on the average, were found in St. John's, Nfld., where they averaged 5.7 rooms and 3.0 bedrooms, and the smallest were in Sudbury, Ont., where they had an average of 4.6 rooms and 2.3 bedrooms.

Tables showing housing characteristics and tenure of occupied dwellings, by province and metropolitan area, are given in the 1965 Year Book at pp. 710-711.

Age-old occupations are undergoing radical change and new occupations are emerging.

The use of heavy machinery and of pre-prepared and prefabricated materials has changed the job of the construction worker and has reduced the size of crew required on any type of construction project, whether building or engineering.

The computer is becoming commonplace in both management and production areas. Keeping a large one busy requires the skills of a variety of specialists—economists, mathematicians, engineers, operations researchers, computer analysts, financial planners and statisticians—as well as of highly trained operators.

## Section 1.—The Government in Relation to Labour

### Subsection 1.—The Federal Department of Labour and the Federal Department of Manpower and Immigration

#### The Department of Labour

The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds. Since that time the Department has been charged with the administration of new legislation and has taken on new functions. Its work fell broadly into two main areas—industrial relations and manpower supply—until Jan. 1, 1966, when all manpower activities were transferred to a new Department of Manpower and Immigration (see p. 732).

The legislation now administered by the Department of Labour in the industrial relations area applies to employers, workers and trade unions under federal jurisdiction. The Department is responsible for conciliation procedures in industrial disputes, the investigation of complaints of unfair labour practices, refusals to bargain and violations of legislation, the processing of applications for the certification and decertification of trade unions and the conducting of representation votes. It determines wage rates and hours of work in Federal Government contracts for construction or supplies, and promotes joint labour-management consultation. It also administers legislation to prevent discrimination in employment based on race, religion, colour or national origin and to provide for equal pay for female employees. In 1965, the Canada Labour (Standards) Code became law. The Code establishes minimum standards of wages, hours of work, vacations with pay and paid general holidays in industries under federal jurisdiction.

\* Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Department of Labour, Ottawa.

For the past 20 years, the establishment of labour-management committees in industry has been encouraged and assisted by the Department of Labour through its Labour-Management Co-operation Service—recently reorganized as the Labour-Management Consultation Branch. There are now 2,100 active committees whose efforts are directed to such subjects as improving work methods, safety, operating efficiency, plant maintenance, elimination of waste in labour and materials, maintenance of good morale, promoting educational and training activities and joint consultation on operational changes brought about by technological change.

Research, involving regular and special surveys and analyses of economic and social trends affecting the labour force, is an important part of the Department's work carried out by the Economics and Research Branch. It studies wages and working conditions, union organization, collective bargaining, industrial relations, labour standards and safety. Through the Women's Bureau, it investigates the problems of women in the labour force. It operates a plan of workmen's compensation for seamen on Canadian ships and arranges workmen's compensation for Federal Government employees. In addition to the publication of statistical reports and the results of research studies, the Department publishes the monthly *Labour Gazette*, maintains records of labour legislation in the provinces and in other countries and operates a labour lending library. It provides liaison between the International Labour Organization and the federal and provincial governments and is responsible for the sale and administration of Canadian Government annuities.

### **The Department of Manpower and Immigration\***

This new Department was constituted in June 1966 by the Government Organization Act (SC 1966, c. 25) which was proclaimed effective on Oct. 1, 1966, under the Minister of Manpower and Immigration. It is composed of two operational Divisions—the Canada Immigration Division, the functions of which (transferred from the former Department of Citizenship and Immigration) are outlined in the Immigration and Citizenship Chapter at pp. 216-217, and the Canada Manpower Division, to which were transferred from the Department of Labour the National Employment Service, the Technical and Vocational Training Branch, the Civilian Rehabilitation Branch, the Manpower Consultative Service and parts of the Economics and Research Branch. These operational Divisions are supported by a Program Development Service, and information, financial and administrative, and personnel services. Although the Government organization legislation was not passed until mid-year, the actual transfer took place on Jan. 1, 1966 when reorganization and expansion of the Division functions were begun. Five regional directorates were established to report directly to the Director-General of the Division and staff services were organized into six Branches under an Assistant Director-General.

**Canada Manpower Division.—Manpower Training Branch.**—This Branch continues the training activities formerly conducted by the Department of Labour, including the administration of the federal-provincial Technical and Vocational Training Agreement and the federal-provincial Apprenticeship Training Agreement; these are outlined in the Education Chapter at pp. 346-349. A Training Analysis and Materials Section has been established to prepare occupational and industrial analyses, develop curricula material for the training program supported by the Vocational and Technical Training Act, promote research projects relating to manpower requirements and training in the field, and develop teaching aids.

In the administration of the training program, the Minister has the advice of the National Technical and Vocational Training Advisory Council, the National Advisory Committee on Technological Education and the Industrial Training Committee.

**Vocational Rehabilitation Branch.**—This Branch administers the Disabled Persons Act, 1961, under which the Federal Government shares equally with the participating provinces the costs of vocational rehabilitation services to handicapped persons. Advice

\* Prepared from information provided by the Information Service, Department of Manpower and Immigration.

in this area is given by the National Advisory Council on the Rehabilitation of Disabled Persons, composed of representatives of the medical profession, voluntary agencies, management, organized labour, universities and federal and provincial governments. In co-operation with a sub-committee of the Council, preliminary plans have been made for the development of minimum standards for vocational rehabilitation workshops. Staff-training in this field is conducted by the Branch and federal assistance is given to several provinces for the training of rehabilitation staff. Research projects in rehabilitation are financed by federal funds when conducted by a federal agency and university research projects may be assisted through the University Research Grants Program or on a cost-sharing basis under the Federal-Provincial Vocational Rehabilitation Program. Liaison is maintained with developments in other countries in this field.

The improvement of employment opportunities for mature workers is the function of the Section on Older Workers.

*Employment Stabilization Branch.*—Under the Municipal Winter Works Incentive Program, which is administered by this Branch, the Federal Government provides an incentive to municipalities to undertake public works during the winter by paying a percentage of the direct payroll costs incurred on approved projects. All of the provinces, the Northwest Territories and a number of Indian bands participated in the program during the period Nov. 1, 1965 to Apr. 30, 1966. In general, the Federal Government paid 50 p.c. of the direct payroll costs of the approved projects but municipalities in certain areas of high winter unemployment received 60 p.c. During the 1965-66 period, 6,006 project applications were accepted from 2,516 local authorities, involving direct payroll costs of \$122,288,000. Work was provided on site for an estimated 159,000 men and 8,062,000 man-days. A Government-sponsored Winter Employment Campaign was conducted again during 1965-66, advertised through the newspapers, radio and television as well as through means of other printed matter.

The Supplementary Federal Government Winter Construction Program, introduced in 1963-64, was restricted in 1965-66 to creating more employment in areas of high winter unemployment. Under this program, federal departments bring forward projects that are ready for construction but for which funds have not been provided in current departmental estimates; funds for approved projects are made available under a miscellaneous vote. Projects amounting to \$6,893,000 were approved during 1965-66 to provide 179,000 man-days of work; actual expenditures were \$4,222,513 and the number of man-days provided was 148,694.

*Counselling Services Branch.*—This Branch carries out tasks relating to the adjustment of workers moving into a new environment and persons seeking the opportunity to establish enterprises. It includes sections dealing with Occupational Counselling, Settlement Services, Family Relocation and Special Employment Services.

*Technical Services Branch.*—This new Branch will perform four main functions: develop, implement and co-ordinate policies and techniques relating to occupational identification, description and classification, and job analysis and specification; develop psychological, aptitude and achievement tests for use in counselling and selection of persons for jobs; develop policies and techniques for use in the selection of workers in large-scale operations; and set up computer index systems to facilitate the matching of workers' skills and job requirements, the clearance of job orders and the transmission and reporting of data on the operations of the Manpower Division.

*Operational Services Branch.*—Included in the work of this Branch is the operation of the Manpower Consultative Service which continues to provide technical, consultative and financial assistance to management and labour, to assist in the development of constructive solutions to manpower problems created by technological and economic changes in industry, to stimulate and encourage advance planning by management for such changes in manpower, and to persuade labour to become involved in the assessment of the changes that may be required and the best method of providing for them. For such programs, the

Service adopts a research approach and, as an encouragement, offers to pay 50 p.c. of the costs involved in making studies. It also provides mobility assistance to employees displaced by industrial change. During 1966, work continued on ten programs of manpower assessment and four Manpower Assessment Incentive Agreements and one Mobility Agreement were approved. In all regions, preliminary planning was under way to meet the anticipated labour needs of primary industries.

In 1965-66, a total of 12,029 persons in the administrative, professional and technical categories were placed in employment, an increase of more than 13 p.c. over 1964-65. Somewhat less than half of this total were graduating students and an additional 15,788 students were placed in summer and part-time employment by centres of placement and career planning at institutions of higher education. Nineteen new centres of placement and career planning were established during the year.

*Canada Manpower Centres.*—The 250 local offices of the former National Employment Service were renamed Canada Manpower Centres on Oct. 1, 1966. The new name reflects more accurately the emphasis being placed on counselling, training, labour force mobility, up-grading, research, and labour market information. Rapid technological change, with attendant manpower supply problems, is the reason for broadening the responsibilities of the employment service. Its previous role was confined largely to placement operations. A more decentralized operation and improved staff and facilities will enable the Canada Manpower Centres to become the key operational agency in the Division's manpower planning and policies.

**Program Development Service.**—This Service was formed as a part of the new Department of Manpower and Immigration in the latter part of the year ended Mar. 31, 1966. It consists of five Branches: Research, Planning and Evaluation, Manpower Information and Analysis, Pilot Projects, and Legislation and Legal (supplied by the Department of Justice). The basic purpose of the Service is to assist the two operating Divisions of the Department in evaluating existing programs and developing new or revising existing programs so as to ensure the most effective means of supporting departmental policy both in the field and in the headquarters offices of the Department. Specifically, the Program Development Service has the responsibility for departmental functions related to research, statistical services, manpower information and labour market analysis, experimental projects, and legislation.

## **Subsection 2.—Federal Labour Legislation and Provincial Labour Legislation**

### **Federal Labour Legislation**

**Fair Wages Policy.**—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act (RSC 1952, c. 108) and Order in Council PC 1954-2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight a day and 44 a week, except in an emergency approved by the Minister or in special circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour. An Act to amend the Fair Wages and Hours of Labour Act was passed by Parliament and received Royal Assent on June 16, 1966. This amendment will, on a date to be proclaimed by the Governor in Council, make it a condition of Federal Government construction contracts that \$1.25 an hour will be the minimum rate to be paid for work on such contracts regardless of the prevailing standards, and will adopt 40 hours as a regular work week rather than 44. Contractors will be able to work employees up to 48 hours a week without a permit as long as the overtime rate of time-and-one-half is paid after 40 hours.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council PC 1954-2029. The hours of such work must be those fixed by the

custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

**Government Prevailing Rate Employees.\***—Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Rates of pay for such positions are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the appropriate area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour, from wage research conducted by the Economics and Research Branch, and from collective agreements and wage rates established under the legislation of some provinces. The Labour Standards Branch provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

**The Industrial Relations and Disputes Investigation Act.**—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are set down

\* Statistics on numbers and earnings of prevailing rate and other groups of federal employees which were exempt from the Civil Service Act are given at pp. 156-161; this Act was replaced by the Public Service Employees Act (SC 1966-67, c. 71) passed by the House of Commons Feb. 20, 1967, the provisions of which are extended to cover prevailing rate employees and ships' officers and crews.

in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes. The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948 to Dec. 31, 1965, the Canada Labour Relations Board received 1,766 applications for certification, 1,012 of which were granted, 363 rejected, 359 withdrawn and 32 were pending at the end of the period. Of the 1,165 industrial disputes dealt with under the conciliation provisions of the Act, 1,017 were settled by conciliation officers and conciliation boards, 77 were not settled, 33 lapsed and 38 were pending at Dec. 31, 1965.

**Reinstatement in Civil Employment Act.**—This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942, revised in 1946, and broadened in its application in 1954.

**Canada Fair Employment Practices Act.**—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (see p. 735). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and the use of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

**Female Employees Equal Pay Act.**—This Act came into effect on Oct. 1, 1956 and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

**Canada Labour (Standards) Code.**—This Act received Royal Assent on Mar. 18, 1965 when the administration and general provisions of Part V came into effect. The Act provides, in Parts I to IV which came into force on July 1, 1965, minimum standards with respect to hours of work, minimum wages, annual vacations and general holidays in industries under federal jurisdiction; the Annual Vacations Act 1958 was repealed.

The standard hours of work are eight a day and 40 a week, with maximum hours of 48 a week. Overtime pay at not less than time-and-one-half is required for all hours worked in excess of the standard hours. Permits are required in order to work more than 48 hours a week. Where the nature of the work necessitates irregular distribution of hours of work, the hours may be averaged over a period of two weeks or more.

The minimum wage is \$1.25 an hour for all persons 17 years of age or over and the minimum wage for persons under 17 years of age is \$1.00 an hour. Special rates may be set for persons receiving training on-the-job and for any person who has a disability which is a handicap in the performance of work to be done.

Employees are entitled to a two-week vacation with pay after one year of employment, with vacation pay calculated at 4 p.c. of wages. The general holidays are eight in number and every employee is entitled to a holiday with pay on each of them, or substitutes for them.

The Code has special and transitional provisions. Any person may make a submission (under Sect. 51) for deferment or suspension of Part I (Hours of Work). The Minister may grant deferment or suspension where it can be shown that the application of Part I is or would be prejudicial to the interests of the employees or detrimental to the operation of the business. The Minister's order to defer or suspend may be for a period up to but not exceeding 18 months from the date of the order, and the order may or may not contain conditions on hours.

A further deferment or suspension may be made by the Governor in Council, but only after there has been an inquiry, and the order of the Governor in Council must contain conditions on hours of work. Where a business is organized and operated in a local area, the Act provides for the making of a submission (under Sect. 52) for deferment of Sect. 11 (Minimum Wages) but the submission must have been made before July 1, 1965. The Minister may grant the deferment where it can be shown that the application of the minimum wages would be prejudicial to the interests of the employees or detrimental to the operation of the business. The deferment order may not extend beyond Jan. 1, 1967 and shall specify the minimum rate of wages that shall be paid during the period of deferment.

All submissions under Sects. 51 and 52 pending on July 1, 1965 may be listed in the *Canada Gazette*, and this action stays the operation of Part I (Hours of Work) and Sect. 11 (Minimum Wages) until the Minister has rejected the submission or has made an order under Sect. 51 or 52.

Regulations have been enacted to carry out the purposes of the Code. Among other things they provide, where there is irregular distribution of hours of work, that the standard hours and maximum hours of work may be averaged over a period of 13 weeks or fewer without Ministerial approval, and over a longer period with Ministerial approval.

## Provincial Labour Legislation

Because of the authority given by the British North America Act to the provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights in the province, power to enact labour legislation is largely the prerogative of the provinces. Since it imposes conditions on the rights of the employer and employee to enter into a contract of employment, labour legislation is, generally speaking, law in relation to civil rights. Under this authority, the provincial legislatures have enacted a large body of legislation affecting the employment relationship in such fields as working hours, minimum wages, the physical conditions of workplaces, apprenticeship and training, wage payment and wage collection, labour-management relations, workmen's compensation and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a Workmen's Compensation Board appointed by the Lieutenant-Governor in Council.

**Minimum Wages.**—As a means of ensuring adequate living standards for workers, all provinces have enacted minimum wage legislation. These laws vest in a minimum-wage-fixing board authority to set or recommend minimum wages for employees. In most provinces minimum wage orders now cover almost all employment except farm labour and domestic service. In Prince Edward Island, however, the only classes of female workers for which minimum rates have been set are restaurant and laundry workers.

Minimum rates set by the orders apply throughout the provinces except in Nova Scotia, Quebec and Saskatchewan. Nova Scotia is divided into three zones for minimum wage-setting purposes; in Quebec there are two zones. In Saskatchewan minimum rates vary between urban and rural areas. Except in Newfoundland, Nova Scotia and Prince Edward Island, the same rates are set for both sexes. The New Brunswick orders are made

on an industry basis but together provide general coverage for most employees in the province. The British Columbia board issues a separate order for each industry or occupation. In the other provinces, minimum wage boards issue general orders, supplemented by special orders in some cases.

**Hours of Work.**—Five provinces have general hours-of-work laws. Those of Ontario, Alberta and British Columbia set limits on hours of work. Hours are limited in Alberta and British Columbia to eight a day and 44 a week, and in Ontario to eight a day and 48 a week. The Manitoba and Saskatchewan Acts regulate hours through the requirement that one and one half times the regular rate must be paid if work is continued after specified limits. The Manitoba law requires payment of the overtime rate after eight and 48 hours for men and eight and 44 hours for women. The Saskatchewan Act requires payment of the overtime rate after eight and 44 hours. Some exceptions are provided for in all five Acts. Hours of work are regulated for particular classes of workers or for some industries in all provinces under other legislation.

**Regulation of Wages and Hours in Certain Industries.**—Industrial standards legislation is in effect in Newfoundland, Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta. These laws provide that a schedule of wage rates and hours of work agreed upon by a representative group of employees and employers in an industry or trade may, upon approval by the government, be given statutory effect by Order in Council, and so become the minimum terms of employment for the entire industry or trade in the area. An advisory committee, usually equally representative of employers and employees, is established to assist in enforcing a schedule. This legislation is used fairly extensively in the building trades, the clothing industries, barbering and a few other industries. In Newfoundland, Nova Scotia and New Brunswick schedules have been issued only for certain construction trades in some areas. In Ontario, schedules for the garment trades, the fur industry and the hard furniture industry apply throughout the province and a substantial number of schedules apply to various construction trades and to barbering in specified areas.

Under the Quebec Collective Agreement Act, certain terms of a collective agreement, including those dealing with hours and wages, may be made binding on all employers and employees in the industry concerned in a defined area, provided the parties to the agreement represent a sufficient proportion of the industry. The standards made binding under this procedure are contained in a decree, which has the force of law. Approximately 100 decrees applying to construction, manufacturing, barbering and hairdressing, commercial establishments, and other industries and services are in effect, covering close to 250,000 employees. Of these decrees, 15 apply throughout the province.

The Construction Industry Wages Act in Manitoba provides for the setting of minimum rates of wages and maximum hours of work at regular rates for employees in the construction industry, on the recommendations of a board equally representative of employers and employees, with a public member as chairman. Under this Act, annual schedules set the regular work week and hourly rates of wages for various classifications of workers in the heavy construction industry, the Greater Winnipeg building construction industry, and in rural building construction.

**Annual Vacations and Public Holidays.**—All provinces except Newfoundland and Prince Edward Island have annual vacations legislation applicable to most industries. In Nova Scotia, New Brunswick and Quebec, workers are entitled to a vacation with pay of one week after a year of service; in Ontario, workers are entitled to a vacation of one week after each of the first three years of employment, and of two weeks after the fourth and each subsequent year. In the four western provinces, the annual paid vacation required by law is two weeks and, in Saskatchewan, three weeks after five years service.

The Provinces of Alberta, British Columbia, Manitoba, Nova Scotia and Saskatchewan have enacted legislation of general application dealing with public holidays. The number of holidays named varies from five to eight, and the provisions for payment also vary.

**Anti-discrimination Laws.**—Eight provinces have adopted fair employment practices laws forbidding discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. In addition, in British Columbia and Ontario, discrimination in employment and trade union membership on grounds of age is prohibited. Eight provinces have equal pay laws that forbid discrimination in rates of pay solely on the basis of sex, and the Quebec statute respecting discrimination in employment forbids discrimination in employment on the basis of sex.

**Accident Prevention and Workmen's Compensation.**—Factory or industrial safety Acts in most provinces establish safeguards for the protection of the health and safety of workers in factories and other workplaces with respect to such matters as sanitation, heating, lighting, ventilation and the guarding of dangerous machinery. Long-established laws regulating the design, construction, installation and operation of mechanical equipment, such as boilers and pressure vessels, elevators and lifts and electrical installations, have been revised in recent years in line with technological changes, and legal standards have been set in new fields involving hazards to workers and the public, such as the use of gas- and oil-burning equipment. This legislation also prescribes standards of qualification for workers who install, operate or service such equipment. Laws requiring safety standards to be observed in construction and excavation work are in force in most provinces.

Workmen's compensation legislation providing a system of collective liability on the part of employers for accidents occurring to employees in the course of their employment are in force in all provinces. Workmen's compensation laws are described in greater detail on pp. 772-773.

**Labour Relations.**—In all provinces, there is legislation similar in principle to the federal Industrial Relations and Disputes Investigation Act, designed to establish equitable relations between employers and employees and to facilitate the settlement of industrial disputes. These laws guarantee freedom of association and the right to organize, establish machinery (labour relations boards) for the certification of a trade union as the exclusive bargaining agent of an appropriate unit of employees, and require an employer to bargain with the certified trade union representing his employees. Except in Saskatchewan, they require the parties to comply with the conciliation procedures laid down in the Act before a strike or lockout may legally take place, and they provide also that every collective agreement must contain provision for the settlement of disputes arising out of the agreement, and prohibit strikes and lockouts while an agreement is in effect. All prohibit defined unfair labour practices and prescribe penalties.

In most provinces, certain classes of employees who are engaged in essential services, such as policemen and firemen, are forbidden to strike and, in lieu of the right to strike, have recourse to final and binding arbitration. There are special provisions requiring arbitration of hospital disputes in five provinces.

**Certification of Qualified Tradesmen.**—All provinces have apprenticeship laws providing for an organized procedure of on-the-job training and school instruction in designated skilled trades, and statutory provision is made in most provinces for the issue of certificates of qualification, on application, to qualified tradesmen in certain trades. In some provinces, legislation is in effect making it mandatory for certain classes of tradesmen to hold a certificate of competency.

**Changes in 1965-66.**—Significant developments in provincial labour legislation in the years 1965 and 1966 are described below.

**Minimum Wages.**—General minimum wage rates were increased in seven provinces. Manitoba and Alberta also removed the differentials in the minimum rates between rural and urban areas. In Nova Scotia, minimum rates were fixed for male workers for the first time. The minimum rates now in effect for experienced workers in certain cities are shown in Table 1.

## 1.—Minimum Wage Rates for Experienced Workers in Certain Cities, by Sex, Dec. 1, 1966

<sup>1</sup> 40 hours in shops.<sup>2</sup> In hotels and restaurants the rates apply to a maximum of 54 hours in a week.<sup>3</sup> In beauty parlours, theatres and amusement places the rates apply to a maximum of 44 hours in a week.<sup>4</sup> 90 cents per hour for male workers in food processing plants.<sup>5</sup> Chauffeurs, watchmen, stationary enginemen and firemen 70 cents; bell boys 56 cents.<sup>6</sup> Dollars per week for waitresses; \$16 for other restaurant workers.<sup>7</sup> Dollars per week.

**Hours of Work.**—In Alberta, the 44-hour week in effect in centres with a population of more than 5,000 was extended to all parts of the province, effective from Jan. 1, 1966. In Manitoba, the statutory overtime requirement (one and one half times the employee's regular rate for all time worked in excess of eight hours in the day and 44 hours in the week for women, and eight hours in the day and 48 hours in the week for men) was extended to all industries subject to the Act in all parts of the province. Prior to the amendment, the statutory overtime standard applied only to employment listed in a schedule and to the industrialized areas of the province.

**Annual Vacations and Public Holidays.**—The annual vacations legislation in Ontario was amended to increase to two weeks the length of the vacation for an employee with more than three years service. In Manitoba, provision was made for payment of vacation pay on termination of employment during a working year. Orders were issued under the Alberta Labour Act requiring employers to give their employees five paid public holidays a year, and providing for the payment of a lump sum to construction workers in lieu of public holidays. In Saskatchewan, also, orders were issued adopting a percentage payment in lieu of pay for eight public holidays for workers in the construction and logging and lumbering industries. In British Columbia, legislation was passed to authorize the Board of Industrial Relations to require employers to give their employees eight public holidays with pay.

**Maternity Protection.**—British Columbia passed a new Maternity Protection Act applying to all types of employment except farming, horticultural operations and domestic service. The Act provides for six weeks of leave of absence during pregnancy and six weeks after childbirth, or longer with a medical certificate, and protects a woman from dismissal while absent on maternity leave up to a period of 16 weeks.

**Anti-discrimination Measures.**—Two provinces enacted anti-discrimination laws. Alberta adopted a Human Rights Act prohibiting discrimination in employment, in trade union membership, and in public accommodation on grounds of race, religious beliefs, colour, ancestry or place of origin. Ontario passed the Age Discrimination Act, 1966,

making Ontario the second province, after British Columbia, to ban discrimination in employment on grounds of age. The Alberta Act binds the Crown and its agencies. An amendment in Ontario in 1965 also brought the provincial government and its agencies under the Human Rights Code.

*Industrial Safety.*—The major change was the complete revision and up-dating of the industrial safety legislation of three provinces—Manitoba, Nova Scotia and British Columbia. All three laws were broadened in scope. The Manitoba and Nova Scotia Acts contain general principles and authorize the setting of detailed safety standards by regulation. The new legislation in British Columbia sets general standards for the working environment in such matters as hygiene and the welfare and comfort of employees. The general Accident Prevention Regulations under the British Columbia Workmen's Compensation Act, which constitute the province's safety code, were also revised. In New Brunswick and Ontario, the first detailed regulations under general industrial safety Acts passed in 1964 came into effect in 1965. The Ontario Loggers' Safety Act was proclaimed in force and regulations were issued under it.

Steps were taken through a revision of regulations in some provinces to strengthen safety standards governing construction, grain elevators and passenger and freight elevators.

*Workmen's Compensation.*—Benefits under workmen's compensation laws were increased in most provinces. Five provinces increased the maximum yearly earnings on which compensation may be paid. The principle of adjusting pensions to the cost of living in line with increases in the Consumer Price Index was introduced in the British Columbia legislation. Compulsory coverage of farm workers was introduced in Ontario.

*Labour Relations.*—Developments in labour relations legislation related in the main to groups which were brought under collective bargaining legislation for the first time or which had only recently become organized for bargaining purposes. The Ontario Hospital Labour Disputes Arbitration Act was enacted to prohibit strikes and lockouts in disputes involving hospital employees and to provide for the settlement of such disputes by arbitration. In the general field of public service, a new Civil Service Act was enacted in Quebec, which gave public servants employed by the province the right to bargain collectively with the government regarding salary and other conditions of employment and the right to strike, provided essential services were maintained. These changes and somewhat similar changes in the law in Manitoba and Alberta have led to collective agreements between the government of those provinces and their employees. Special provisions for teachers were added to the Quebec Labour Code, placing delays upon strike action but not prohibiting it. Amendments in Nova Scotia brought employees of provincial boards and commissions under the Trade Union Act.

A number of changes were also made in the general labour relations law of several provinces. In Ontario and Manitoba, amendments to dispute settlement provisions were designed to encourage the use of a mediator selected by the parties to a dispute as an alternative to the use of conciliation boards. The jurisdiction of the Ontario Labour Relations Board was extended to cover disputes over work assignments and the Manitoba Labour Board was given authority to deal with unfair labour practice complaints.

*Apprenticeship.*—Nova Scotia replaced its Apprenticeship and Tradesmen's Qualification Act and six provinces designated new trades for the purpose of apprenticeship training.

## Section 2.—The Labour Force\*

Since 1946, reliable information for analysis of employment in Canada, at the national level and for the five major regions, has been provided through a labour force survey. Between November 1945 and November 1952, quarterly surveys were undertaken and, thereafter, the survey has been carried out on a monthly basis. The sample used in the survey has been designed to represent all persons in the population, 14 years of age or over, residing in Canada, with the exception of residents of the Yukon and Northwest Territories, Indians

\* Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

living on reserves, inmates of institutions and members of the Armed Forces. Interviews are carried out in approximately 35,000 households chosen by area sampling methods across the country.\*

In the labour force survey persons are classified on the basis of their activity during the week prior to the survey interview week. This week is called the reference week. The main divisions in the classification are:—

**Labour Force.**—The civilian labour force is composed of that portion of the civilian non-institutional population, 14 years of age or over who, during the reference week, were employed or unemployed.

**Employed.**—The employed include all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; (c) had a job, but were not at work, because of bad weather, illness, industrial dispute or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

**Unemployed.**—The unemployed includes all persons, who, through the reference week: (a) were without work and seeking work, i.e., did no work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

**Not in the Labour Force.**—Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed, or if they looked for work as unemployed.

The estimates derived from the labour force survey, which are based on a sample of households, are subject to sampling error. Somewhat different figures might be obtained if a complete census were taken. This difference is called the sampling error of the estimates. In the design and processing of the labour force survey extensive efforts are made to minimize the sampling error; in general, the percentage of error tends to decrease as the size of the estimate increases. A statistical measure of the sampling error can be found in DBS monthly publication *The Labour Force* (Catalogue No. 71-001).

\* A comprehensive description of the survey is given in DBS publication *Canadian Labour Force Survey—Methodology* (Catalogue No. 71-504).

## 2.—Estimates of the Civilian Labour Force and its Main Components, Annual Averages, 1946 and 1956-65

NOTE.—Comparable figures for 1947-55 are given in the 1962 Year Book, p. 708. Figures do not include inmates of institutions and Indians on reservations.

<sup>1</sup> Excludes Newfoundland.

**Characteristics of the Civilian Labour Force, 1946-65.**—The civilian non-institutional population averaged 13,128,000 in 1965 compared with 8,779,000 in 1946, an increase of 49.5 p.c., and during the same period the labour force increased 47.9 p.c. to 7,141,000. As a result, the proportion of the population 14 years of age or over in the labour force declined somewhat from 55.0 p.c. to 54.4 p.c. during the period. Underlying this slight decline was a decrease in the proportion of males in the labour force and a partially offsetting increase in the proportion of females in the labour force. Such factors as changes in the age composition of the population, an increase in the number of young people deferring their entry into the labour force by remaining longer in school and a greater tendency for workers to retire from the labour force at an earlier age contributed to the decline in the male labour force participation rate from 85.1 p.c. to 77.9 p.c. between 1946 and 1965. Although these factors also influenced females, they were more than compensated by the increase in the proportion of married women in the labour force. For example, between 1959 and 1964 the labour force participation rate of married females increased from 18.0 p.c. to 24.2 p.c. In 1965 married women constituted 51.7 p.c. of the female labour force and the proportion of the female population in the labour force increased from 23.4 p.c. in 1953 to 31.3 p.c. in 1965. The tendency for a greater proportion of married women to enter the labour force was also reflected in the labour force participation rates of females 25-44 and 45-64 years of age. During the 1953-65 period, the proportion of 25-44-year-old females in the labour force rose from 23.1 p.c. to 32.6 p.c. and for the 45-64-year-olds the proportion increased from 17.2 p.c. to 32.9 p.c.

Greater job opportunities for women, particularly in the service industries, facilitated the increase in the female labour force participation rate. In 1946, the goods-producing industries and the service-producing industries accounted for about 60 p.c. and 40 p.c., respectively, of total employment; by 1965 these proportions had changed to 43 p.c. and 57 p.c., respectively. Some notable shifts in the distribution of employment also took place within these broad industry groupings. In 1946, almost one in four employed persons worked in agriculture but by 1965 the ratio had declined to less than one in ten. Between 1946 and 1965, a slight decline occurred in the proportion of persons employed in manufacturing industries but the proportion employed in trade, in finance, insurance and real estate, and in service industries increased substantially.

Paralleling the shifts in the distribution of employment among industries was a change in the occupational mix. A greater increase occurred in the number of white-collar occupations than in the number of blue-collar jobs in the postwar period, reflecting the changing composition of final output and also the introduction of new methods of production. Table 5 shows that increases occurred in the proportions of persons employed in the managerial, the professional and technical, the clerical and the service occupational groups in the 1948-65 period. On the other hand, agricultural occupations, in which approximately 22.5 p.c. of all employed persons worked in 1948, accounted for only 8.7 p.c. of employed persons in 1965. Small declines also occurred in the proportions of employed persons working in the fishing, logging, trapping and mining occupational group, in the manufacturing and mechanical group and in the transportation group.

During the 1946-65 period, total employment increased 47.1 p.c. to 6,862,000; the number of men employed rose 34.2 p.c. to 4,842,000 and the number of females 91.1 p.c. to 2,020,000. On an annual average basis, unemployment as a percentage of the labour force fluctuated widely during the period, ranging between 2.2 p.c. in 1947 and 7.1 p.c. in 1961; it averaged 3.9 p.c. in 1965. Throughout this period, unemployment rates were substantially lower for women than for men.

Persons not in the labour force averaged 5,986,000 in 1965 compared with 3,950,000 in 1946, an increase of 51.5 p.c. Housewives and students together accounted for over 80 p.c. of the 1965 total.

1965 <sup>4</sup>	5.4	0.9	8.7	2.2	25.2	4.9

<sup>1</sup> Includes commercial and financial occupations.<sup>2</sup> Excludes Newfoundland.<sup>3</sup> Classified according

to the 1951 occupational classification, using 1961 occupational classification terminology.

<sup>4</sup> Classified according to the 1961 occupational classification.<sup>5</sup> Includes manufacturing and mechanical and construction occupations.

Several changes in the regional distribution of the Canadian labour force occurred between 1946 and 1965. The proportion in the Prairie Province region declined from about 20 p.c. to 17 p.c., there were small increases in the proportions in Quebec, Ontario and British Columbia, and the Atlantic region's share remained unchanged. Employment was substantially higher in 1965 than in 1946 in all regions. In British Columbia it increased 63.8 p.c., in Ontario 54.1 p.c., in Quebec 49.0 p.c., in the Prairie Provinces 26.3 p.c., and in the Atlantic region (excluding Newfoundland) 14.3 p.c.

There was an uneven regional distribution of unemployed persons in 1965. The Atlantic region, which contained only 8.6 p.c. of the total labour force, accounted for 16.1 p.c. of the unemployed, and Quebec, which contained 28.3 p.c. of the labour force, accounted for 38.9 p.c. of the unemployed. Conversely, Ontario and the Prairie Provinces, with

36.6 p.c. and 17.2 p.c., respectively, of the labour force, accounted for only 23.6 p.c. and 11.1 p.c., respectively, of the unemployed. British Columbia had 9.3 p.c. of the labour force and 10.0 p.c. of the unemployed. This uneven distribution of unemployed persons, which also prevailed in 1946, was reflected in the regional unemployment rates. The annual average unemployment rate in 1965 was 7.4 in the Atlantic region, 5.4 in Quebec, 2.5 in Ontario, 2.5 in the Prairie Province region, and 4.2 in British Columbia.

### Section 3.—Employment Statistics\*

#### Subsection 1.—Statistics of Employment, Earnings and Hours

Monthly records of employment have been collected from larger business establishments since 1921. At that time a survey was instituted to provide employment index numbers which would serve as current economic indicators. In 1941 the survey was extended to provide information on payrolls and per capita wages and salaries and in 1944 it was further extended to provide data on hours of work and hourly and weekly wages. Also during the war period, separate records for men and women employees were established. Beginning with the January 1966 publications of *Employment and Average Weekly Wages and Salaries* and *Man-Hours and Hourly Earnings*, the data compiled are on a revised basis. A historical series (Catalogue No. 72-504) provides, on the revised basis, monthly and annual data from 1961-65 and will be extended to provide data from 1957 to this period. The revision has involved the publishing of employment indexes on the time base 1961=100 in place of the time base 1949=100. All data are compiled on the 1960 standard industrial classification instead of the 1948 standard industrial classification. The new establishment concept of reporting has been introduced with the result that, in a number of cases, activities formerly reported separately are now consolidated into operating entities capable of reporting all elements of basic industrial statistics, including employment and payrolls.

Statistics below the provincial level are compiled for many urban areas using the census definition for metropolitan areas and modified definitions for other urban areas. The survey at present covers establishments with 20 or more employees in any month of the current period rather than, as formerly stated, "those usually having 15 or more employees". The data in Tables 7-14 are presented according to the revised series.

The survey now covers sectors of the following major industry divisions: forestry; mining (including milling); manufacturing; construction; transportation, communication and other utilities; trade; and finance, insurance and real estate. Also included are

\* Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, and recreational and business services. The survey excludes agriculture, public administration and community services such as health and education. The coverage corresponds closely, therefore, to the business sector of the economy. Since the survey does not cover small firms and excludes several industries, the employment records are published in the form of index numbers (1961=100).

The monthly employment statistics relate to the number of employees drawing pay in the last pay period in the month. Data are requested for all classes of employees with the exception of homeworkers and casual employees working less than one day in the pay period. Owners and firm members are also excluded. The respondents report the gross wages and salaries paid in the last pay period in the month, before deductions are made for income tax, unemployment insurance, etc. The reported payrolls represent gross remuneration for services rendered and paid absences in the period specified, including salaries, commissions, piece-work and time-work payments, and such items as shift premiums and regularly paid production, and incentive and cost-of-living bonuses. The statistics on hours relate to the straight and overtime hours worked by those wage-earners for whom records of hours are maintained, and also to hours credited to wage-earners absent on paid leave during the reported period. If the reported period exceeds one week, the payroll and hours data are reduced to weekly equivalents.

**Employment.**—Table 7 shows that, over the five-year period 1961-65, the industrial composite index of employment rose by 14.3 p.c.; service increased by 25.8 p.c., construction by 19.7 p.c., manufacturing by 17.2 p.c., finance, insurance and real estate by 16.6 p.c. and trade by 14.5 p.c. The increase in manufacturing was particularly significant in view of the fact that this industry accounts for over 35 p.c. of industrial employment as measured by the employment survey. Mining, forestry and transportation, communication and other utilities showed some improvement during 1965, particularly mining, although these industries have been operating at reduced levels of employment in recent years.

#### 7.—Annual Average Index Numbers of Employment by Industrial Division, 1961-65, and Monthly Indexes 1965

NOTE.—These indexes are calculated as at the last pay period of each month, on the base 1961=100.

Year and Month	Forestry	Mining (incl. milling)	Manufacturing	Construction	Transportation, Communication and Other Utilities	Trade	Finance, Insurance and Real Estate	Service <sup>1</sup>	Industrial Composite

**Weekly Wages and Salaries.**—Average weekly wages and salaries have increased substantially in the years for which current payroll statistics have been collected, rising from \$23.44 in 1939 to \$91.01 in 1965. The upward movement gained momentum after the end of the War and average annual increases from 1946 to 1952 were more than twice

as great as those between 1939 and 1946. After 1952 the rate of increase, in terms of year-to-year percentage changes, fell slightly below that recorded during the war years, particularly between 1959 and 1962, when average earnings rose at rates of about 3 p.c. per annum. Over the next three years the rate increased moderately and earnings in 1965 were 5.2 p.c. higher than in 1964.

<sup>1</sup> Mainly hotels, restaurants, laundries, dry-cleaning establishments and recreational and business services.

**Hours and Earnings of Hourly Rated Wage-Earners.**—The monthly survey of employment and payrolls covers statistics of hours of work and paid absence of those wage-earners for whom records of hours are maintained, together with the corresponding totals of gross wages paid. These wage-earners are mainly hourly rated production workers; information on hours is frequently not kept by employers for ancillary workers nor, in many industries and establishments, for any wage-earners. Salaried employees are excluded by definition from the series. As a result of these exclusions, data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

During the period 1961-65, there was little change in average weekly hours but average hourly and weekly wages rose substantially. For the most part, upward wage-rate revisions in all industries were responsible for the increases. Technological changes, which in many cases involve the employment of more highly skilled workers at the expense of those in the lower-paid occupations, also contributed to the advance of average hourly earnings. From 1961 to 1965, average weekly wages rose 16.8 p.c. in manufacturing, 14.1 p.c. in mining and 22.6 p.c. in construction. Average hourly earnings increased 15.8 p.c. in manufacturing, 11.2 p.c. in mining and 22.7 p.c. in construction. In manufacturing, 1965 average hourly earnings of \$2.12 and average weekly wages of \$86.92 represented increases of 4.9 p.c. and 4.7 p.c., respectively, over the 1964 levels.

<sup>1</sup> Durable goods manufacturing includes wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products and non-metallurgical mineral products; non-durable goods manufacturing includes all other manufacturing industries.

#### Subsection 2.—Earnings and Hours in Manufacturing Industries\*

Information obtained in an annual survey of earnings and hours in manufacturing relating to the last week of October supplements the monthly data dealt with in Subsection 1. The survey was suspended in 1961 and 1962 but resumed in 1963. Separate figures of hours and earnings of men and women wage-earners and salaried employees were obtained in each survey and additional material has been collected periodically. Percentage distributions of wage-earners in a given range of hours were compiled each year from 1946 to 1949 and every third year thereafter to 1958 and again in 1965; statistics are shown for the

\* More detailed information is given in DBS annual report *Earnings and Hours of Work in Manufacturing* (Catalogue No. 72-204).

latest survey in Table 19. Percentage distributions of wage-earners and salaried employees by amounts earned in the survey week were obtained triennially from 1950-59 and again in 1964. Table 20 summarizes data on earnings of both groups of manufacturing employees.

The annual survey is limited to establishments usually employing 15 or more persons and covers approximately 90 p.c. of all employees reported to the annual Census of Manufactures. Establishments are asked to report for all casual, part-time and full-time employees on their staffs in the survey week, excluding proprietors, pensioners, homeworkers, employees absent without pay throughout the week, and staffs in manufacturers' separately organized sales offices. Gross earnings for the week are required, including regularly paid bonuses, overtime pay and amounts paid for absences in the survey week. The reported hours comprise part-time, full-time and overtime hours worked and hours of paid absence. The general averages obtained are usually very similar to those derived from the corresponding monthly survey.

Over the past 16 years, total employment as reported to this survey has increased 44.1 p.c., the durable goods industries absorbing 53.1 p.c. of the expansion. The relative sex composition of the manufacturing work force did not alter significantly over the period, although an increase of 68.4 p.c. was reported in the number of males employed compared with a gain of 37.6 p.c. in female employees; the relative proportion of men in the work force rose to 76.4 p.c. from 75.3 p.c. in 1949. During the same period, the percentage increase in salaried employees was three times as high as for wage-earners, being 97.7 p.c. for the former as against 32.7 p.c. for the latter. It should be noted, however, that the acceleration in the increase in the number of salaried employees was more pronounced in the first half of the period, a trend associated with developments in planning, administration and record-keeping which increased requirements for professional and clerical personnel, and with changes in manufacturing processes which have frequently reduced employment for production workers per unit produced. Changes in the industrial distribution of the employees also contribute to variations in the ratio of salaried personnel to wage-earners, which in any one period may be further influenced by seasonal, market and other conditions affecting levels of production. These usually cause sharper fluctuations in numbers of wage-earners than of salaried employees. Nevertheless, Table 16 shows that since 1956 this group has ranged between 22.9 p.c. and 24.4 p.c. of all employees in manufacturing. Of more particular interest in this regard is the pronounced shift within the salaried class from the clerical category to the "other salaried" personnel group, which includes managerial, professional, technical and supervisory employees. Since 1951, when statistics for clerical workers were first segregated from all salaried staff, the "other salaried" component has expanded from less than one third to one half this class of employee. Within the clerical category itself there has been a marked shift in the sex-composition, men now constituting just over one half of the total number compared with 58.3 p.c. in 1951.

The upward movement in hourly earnings and weekly wages and salaries in the 1956-65 period is apparent from Table 15. In each of these categories of income, men recorded advances of 40.4 p.c., 40.6 p.c. and 40.3 p.c., respectively, since the earlier year; in the same period, women's average hourly earnings increased by 41.0 p.c., their weekly wages by 39.6 p.c. and their salaries by 40.6 p.c.

Tables 17 and 18 show the 1965 averages of hours and earnings for wage-earners and salaried employees, respectively, for major industry groups, the provinces and the six largest metropolitan areas. Average weekly earnings of the clerical and "other salaried" components of the salaried class are also included for 1965 in the latter table.

It will be noted that women earn consistently lower average wages and salaries than do men in their industrial distributions. This results not only from pay differentials and occupational differences but also from such factors as a frequently shorter work week for women, a greater incidence of part-time work and absenteeism among them, their higher proportions of younger and less experienced workers, and their industrial distributions.

### 15.—Average Earnings of Male and Female Employees in Manufacturing, Survey Week 1956-65, and Percentage Increases over Previous Year

NOTE.—Survey week is the last week of October. This survey was not conducted in 1961 and 1962.

### Subsection 3.—Estimates of Employment\*

Estimates of total employment in establishments in the commercial sector of industry were published for the first time in 1965. Results of a monthly survey of employment in a sample of small firms initiated in 1961 were added to data from the long-standing employment and earnings survey to produce estimates of total employment by industrial division.

The estimates of employees are published for those eight major industrial divisions for which monthly and annual data are released in the publication *Employment and Average Weekly Wages and Salaries*. They are considered, for most purposes, to be more reliable indicators of changes of employment than the larger establishment employment indexes. However, the nature of the new sample survey does not permit the publication of industry detail below industrial division level nor of geographic detail below the provincial level at this time. Further developments in connection with the sample survey are at present taking place.

Surveys of employment in the community service industries have been introduced recently. Education and hospital surveys are becoming well established and it is planned at a later date to extend the estimates to cover fishing and trapping, the entire non-commercial sector of community business and personal service and public administration and defence, thus providing comprehensive data for all non-agricultural industries.

\* More detailed information is given in DBS monthly publication *Estimates of Employees by Province and Industry* (Catalogue No. 72-008).

<sup>1</sup> Includes health services (except hospitals); motion picture and recreational services; services to business management; personal services (except domestic service); and miscellaneous services.

## Subsection 4.—Estimates of Labour Income\*

Wages and salaries, as shown in Table 22, include living allowances, bonuses, commissions and "tips" and are measured prior to deductions of all kinds (income tax, employees' contributions to the unemployment insurance fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e., free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the unemployment insurance fund. Contributions to Armed Forces pension funds are also included.

\* More detailed information is given in DBS monthly publication *Estimates of Labour Income* (Catalogue No. 72-005).

## 22.—Wages and Salaries, by Industry, and Supplementary Labour Income, 1961-65, and by Month 1965

NOTE.—Based on the unrevised standard industrial classification. Figures are unadjusted for seasonal variation.

### Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and locality, with standard weekly hours of labour, are compiled by the federal Department of Labour and published in the annual report *Wage Rates, Salaries and Hours of Labour*. The statistics are based on an annual survey covering some 30,000 establishments in most industries and apply to the last normal pay period preceding Oct. 1. Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers for selected occupations are shown separately in the report but are combined in the calculation of industry index numbers shown in Table 23. Predominant ranges of rates for each occupation used are also given; overtime pay is excluded.

The index numbers of Table 23 measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. Information on concepts and methods of developing these statistics is given in the annual report.

### 23.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1956-65 (1949=100)

NOTE.—Indexes back to 1901 may be obtained from the Department of Labour publication *Wage Rates, Salaries and Hours of Labour 1962*.

<sup>1</sup> "Other Industries" consists of logging; mining; transportation (all sectors including air transportation), storage and communication (including radio and TV); public utilities; trade; finance; and government and personal service.

Table 25 gives summary data on working conditions of plant and office employees in manufacturing industries and all industries for the years 1963-65. The percentages in this table denote the proportions that employees—plant or office—of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items. Further details and additional information are given in the annual report *Working Conditions in Canadian Industry*, compiled and published by the Department of Labour and based on a survey at May 1 each year of some 30,000 reporting units.

**Wages of Farm Labour.**—The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 26 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers, the value of the resulting data is considered to be an indicator of trends rather than a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

### 26.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1965-66

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

## Section 5.—Unemployment Insurance

**Unemployment Insurance.\***—During the depression of the 1930s the need for a nation-wide unemployment insurance program became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to

\* Prepared by the Unemployment Insurance and Pensions Section, Labour Division, Dominion Bureau of Statistics; statistics of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.

legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance program at the national level and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations. The Act came into effect on July 1, 1941; amended on several occasions, it was replaced by a new Unemployment Insurance Act, effective Oct. 2, 1955.\* On Apr. 1, 1965, the operation of the National Employment Service was transferred to the Department of Labour and on Jan. 1, 1966 to the Department of Manpower and Immigration (see pp. 731-732).

Legislation provides for a compulsory insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefit to eligible unemployed persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service,† except: the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; hunting and trapping; private domestic service; private-duty nursing; teaching; workers on other than an hourly, daily or piece rate earning more than \$5,460 a year effective Sept. 27, 1959, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a mileage rate) are insured regardless of amount of earnings.

The amount of the employee contribution is determined by the employee's weekly earnings; an equal contribution is required from the employer. The Federal Government contributes one fifth of the aggregate employer-employee contribution and defrays administrative expenses. Contributions became payable on July 1, 1941. Benefit became payable on Jan. 27, 1942 and by Mar. 31, 1966 a total of \$5,107,000,000 had been paid.

The following statement shows the current weekly rates of contribution and benefit effective Sept. 27, 1959. The weekly contribution is based on actual earnings in the week, irrespective of the number of days worked. The benefit rates are calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. In order to qualify for regular benefit, a claimant must have at least 30 weekly contributions in the last 104 weeks prior to claim, eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period, and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

\* Copies of the 1955 Act incorporating subsequent amendments are available from the Queen's Printer, Ottawa (Catalogue No. YX92-222/50).

† Commencing Apr. 1, 1957, coverage was extended to persons engaged in fishing, notwithstanding the fact that such persons are not employees of any other person but are usually self-employed; commencing Apr. 1, 1967, coverage is extended to employees engaged in agriculture and horticulture.

## WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, IN EFFECT FROM SEPT. 27, 1959

NOTE.—Weekly rates in effect from Oct. 2, 1955 to Sept. 26, 1959 are given in the 1962 Year Book, p. 738.

<sup>1</sup> A half stamp.

The Act contains a special provision whereby the regular contribution requirements are relaxed somewhat during a 5½-month period commencing with the first week of December each year. Under this provision, claimants unable to fulfil the contribution requirements for regular benefit may draw "seasonal benefit" if they have at least 15 contribution weeks during the fiscal year or, failing this, if they terminated regular benefit since the previous mid-May.

*Statistics on the Operation of the Act.*—In order to assess the impact of changing economic conditions on the insurance program, provision is made for collection of current operational data, such as claims filed and processed and payments made. This information is published monthly in the *Statistical Report on the Operation of the Unemployment Insurance Act* (Catalogue No. 73-001). Current claims and payment data are useful for administrative purposes and are also a source of information to the public regarding financial and other aspects of the program.

Persons wishing to draw benefit must file either an initial or a renewal claim. Where it is necessary to compute entitlement to benefit, an initial claim is taken, otherwise a renewal. In the main, initial and renewal claims combined are an approximation of recorded separations from employment during a month. However, if a claimant exhausts his benefit and wishes to be reconsidered for further benefit, an initial claim is required. Such claims, accounting for approximately 15 p.c. of the monthly volume in 1965, are not new cases of disemployment. The count of claimants at the month-end indicates the extent to which claimants maintain contact with local offices of the Commission.

## 27.—Amount Paid, 1956-65, and Claims Filed, Claimants and Amount Paid, by Month, 1965

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report *Benefit Periods Established and Terminated under the Unemployment Insurance Act* (Catalogue No. 73-201). Data on persons insured under the Act are obtained from a 10-p.c. sample of insurance books and contribution cards renewed at June 1 each year. Included are persons engaged in insurable employment as well as persons on claim at that date.

## 28.—Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1964 and 1965

NOTE.—Based on a 10-p.c. sample of contributors and claimants at June 1.

*Benefit.*—The duration of regular benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks. However, contributions more than one year old cannot be used if they have already been taken into account in computing previous rights. Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless

otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.\*

Table 29 distributes regular benefit periods terminated by province and shows average weeks and average dollar benefit paid on these terminations. A claimant establishes a *regular benefit period* when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit and the weekly rate authorized, comprising total entitlement, are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first.

\*This list should not be considered exhaustive; more detail may be obtained from the Unemployment Insurance Act and Regulations.

## Section 6.—Employment Injuries and Workmen's Compensation

**Fatal Employment Injuries.**—Data on fatal employment injuries, compiled by the federal Department of Labour, are obtained from provincial Workmen's Compensation Boards, from the Board of Transport Commissioners and other government authorities, and from press reports. Of the 1,263 fatal injuries to industrial workers that occurred during 1965, 332 were the result of the victims being struck by objects—73 by landslides or cave-ins, 56 by falling trees or limbs, 29 by materials falling from stockpiles or loads, and the remainder by other objects. Collisions, derailments, wrecks, etc., were responsible for 276 fatalities, falls and slips for 244, and 121 fatalities were included in the classification "caught in, on or between objects, vehicles, etc.". There were 92 deaths caused by inhalation, absorption, ingestion and industrial diseases, 86 by conflagration, temperature extremes, explosions, 60 by contact with electric current, five by over-exertion, strain, etc., and nine by striking against or stepping on objects. The remainder were the result of miscellaneous accidents.

**Workmen's Compensation.\***—In all provinces legislation is in force providing for payment of compensation to workmen who are injured by accident arising out of and in the course of their employment or who are disabled as a result of a specified industrial disease. To be entitled to benefits, a workman must be employed in an industry covered by the Act at the time of the injury. Compensation is not payable, however, where the disability lasts less than a stated number of days (varying from one to four in the provincial Acts), or if the injury is due to the workman's own misconduct. A workman who is entitled to compensation has no right of action against his employer for injury sustained during employment.

The Acts provide for a compulsory system of collective liability on the part of employers. Industries covered are divided into classes or groups, according to hazard. Employers are required to contribute to the Accident Fund at a rate fixed in accordance with the accident experience of the class or group. Each class is liable for the costs of all accidents occurring in that class.

The laws apply to enumerated employments but the range of industries covered by each Act is very wide. The principal exceptions are farm workers (who are not covered except in Ontario), domestic servants, casual workers, employees of financial, insurance and professional undertakings, employees of non-profit religious or charitable organizations, and workers in certain service industries in most provinces, for example, barber shops and

\* More detailed information is given in the Department of Labour publication *Workmen's Compensation in Canada, A Comparison of Provincial Laws*.

beauty parlours. Small undertakings, i.e., those with fewer than a specified number of employees, are exempted from the Act in some provinces. Excluded employments may generally be brought under the Act on the voluntary application of the employer.

Benefits for disability are based on 75 p.c. of earnings, subject to an annual ceiling. Where disability is permanent, a life pension is paid, irrespective of future earnings. Medical benefits are provided without limitation, regardless of a waiting period, and rehabilitation services are available where necessary. Where death results from an employment injury, fixed monthly payments are made to dependants.

A federal Act provides for compensation for accidents to Federal Government employees according to the scale of benefits provided by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the federal Merchant Seamen Compensation Act.

<sup>1</sup> Injuries requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces.

<sup>2</sup> Includes, except where noted otherwise, payments to compensate loss of earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities.

<sup>3</sup> Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule I of the Ontario and Quebec Workmen's Compensation Acts.

## Section 7.—Organized Labour in Canada

### HISTORY OF THE LABOUR MOVEMENT IN CANADA\*

Canadian trade union history goes back at least 150 years. There were unions of skilled workers in Saint John, N.B., during the War of 1812, and the ferociously anti-union Nova Scotia Act of 1816 complains that "great numbers of . . . Journeymen and Workmen, in the Town of Halifax, and other parts of the Province have, by unlawful Meetings and Combinations, endeavoured to regulate the rate of wages, and to effectuate illegal purposes". From the prohibitions the Act contains, it is clear that the "Combinations" had been doing almost everything a modern union does in pursuit of collective bargaining, and with some success. There is evidence also of unions of printers in Quebec City in 1827 and 1836, in York (Toronto) and Hamilton in 1833, and somewhere in Nova Scotia (probably Halifax) in 1837; shoemakers in Montreal in the 1830s and in Hamilton between 1827 and 1842; carpenters in Montreal in 1834, and stonecutters in 1844; carpenters, cabinet makers, blacksmiths, foundrymen, hammermen, painters, bakers, shoemakers, tailors and "horolo-

\* Prepared by Dr. Eugene Forsey, Director of Research, Canadian Labour Congress, Ottawa.

gers" in Saint John in 1840; seamen in Quebec City in 1847; shipwrights and caulkers in Kingston in 1848-50; carpenters, cabinet makers, blacksmiths and foundrymen, painters, masons and stonecutters, shipwrights, riggers and sailmakers, longshoremen, sawmill men, millers, bakers, shoemakers, tailors, and printers in Saint John in 1853; longshoremen in Quebec City in 1857, and sailmakers in 1858; moulders in Brantford in 1859; and bakers in Victoria in 1859. Most of these early unions were probably short-lived but the Montreal Stonecutters, the Quebec Ship Labourers (longshoremen) and the Saint John Shipwrights lasted well into the present century; the present Toronto Typographical Union goes back to 1844, and the Saint John Longshoremen to 1849.

Before 1859, all the unions seem to have been purely local, except for the Amalgamated Society of Engineers (ASE), a British union that established its first Canadian branch in Montreal in 1853, a second in Hamilton in 1857, and two more (Toronto and Brantford) in 1858. But from 1859 on, Canadian unionism became steadily more and more 'international', that is, more and more of its members belonged to unions with their headquarters and the bulk of their membership in another country. The ASE was followed, during the 1860s, by several organizations with headquarters in the United States—the Moulders (1859), the Locomotive Engineers (1864), the Typographical Union (1865), the Knights of St. Crispin (shoemakers) (1868), and the Cigar Makers (1869); the Coopers also may have arrived before 1871. The 1870s brought the Amalgamated Society of Carpenters and Joiners (British) (1871), the Bricklayers and Masons (1872), the Friendly Society of Carpenters (British) (1875), the Locomotive Firemen (1876), and probably the Knights of Labor (1879), and the 1880s brought the Railway Conductors (1881), the American Brotherhood of Carpenters (1882), the Railroad Trainmen (1885), and the Painters and Decorators (1887). British and American immigrants brought some of these with them; others were invited by Canadian local unions that wanted to be part of something bigger and stronger, and whose members wanted to be able to move freely to jobs in the United States when times were hard in Canada.

Nevertheless, during the 1860s, 1870s and 1880s, Canadian workers continued to form purely local or provincial unions. There were provincial organizations of shoemakers in Ontario and coal miners in Nova Scotia; there were local unions of occupations as diverse as seamen, sailmakers, shipwrights, caulkers, riggers, longshoremen, wharf porters, truckmen, hackmen, bricklayers, masons, stonecutters, carpenters, plasterers, painters, plumbers, tinsmiths, boilermakers, carriage makers, saddle makers, harness makers, trunk makers, cabinet makers, chair makers, varnishers and polishers, coopers, boltmakers, brushmakers, bricklayers' labourers, labourers, tailors, hatters, bakers, bookbinders, and in places as widely scattered as Halifax, Charlottetown, Saint John, Quebec, Montreal, Ottawa, Toronto, Hamilton, London, St. Catharines and Victoria.

For many years the various unions, even in the same city or town, had very little to do with each other. But in December 1863 several Hamilton unions formed a central Trades Union or Trades Assembly, a body made up of delegates from the constituent unions, which lasted till at least 1875. This was followed by the Toronto Trades Assembly (1871-78), the Ottawa Trades Council (1872-76) and the St. Catharines Trades Assembly (1875). In 1873, moreover, the Toronto Assembly called a national convention. By that time, there must have been upwards of a hundred unions in the country but the convention had delegates from only 31 locals of 14 unions, all in Ontario (although the Typographical Unions in Montreal and Quebec sent letters of approval). This convention set up the first national central organization, the Canadian Labor Union, which met again in 1874, 1875, 1876 and 1877. The depression of the 1870s, however, was fatal to both the local and national central bodies, although many of the local unions, especially the branches of the internationals, survived.

Meanwhile, the infant Canadian labour movement had won a resounding and decisive legislative victory in the Toronto printers' strike of 1872, part of the nine-hours movement. Most of the Toronto master-printers, headed by George Brown of the *Globe*, were fiercely anti-union. They had 13 leading members of the Typographical Union committee arrested on a charge of seditious conspiracy. Labour had assumed unions were lawful but it now

found they were not. British Acts freeing them of their Common Law disabilities did not extend to Canada so that Ontario unions in 1872 were in the same legal position as British unions in 1791. They promptly set to work to get Canadian legislation to match the British. Sir John A. Macdonald, delighted at the opportunity to "dish the Liberals" with two pieces of unimpeachably Gladstonian legislation, lost no time in passing through the Dominion Parliament a Trade Unions Act and a Criminal Law Amendment Act (1872) modelled on the British Acts of the previous year. This was the first big piece of successful political action by Canadian unions. The prosecution was dropped and the strike was won.

With the adoption of the National Policy (1879) and the construction of the Canadian Pacific Railway (1881-85), Canadian industry began to revive and grow and the unions revived and grew with it. The 1880s saw not only the organization of a host of purely local unions, most of them short-lived, but also the entry of several new international unions including, besides those already mentioned, the Order of Railway Telegraphers (1888) and the Plasterers and Cement Masons (1889). The railway running trades organizations (Engineers, Firemen, Conductors and Trainmen), which in 1880 had had only about a dozen locals, by 1890 had about 100; in 1880 they had been confined almost wholly to Ontario but by 1890 nearly half their locals were in other provinces, divided almost equally between the Maritimes, Quebec and the West. The building trades also had only about a dozen locals in 1880, again nearly all in Ontario and, by 1890, they had about 60, rather more than half of them in other provinces, more particularly the West and Quebec.

But the most spectacular feature of the 1880s was the appearance and growth of the Knights of Labor. Actually, the Knights (which started in the United States but spread to Canada, Britain, Belgium, Australia and New Zealand) had formed one Local Assembly in Canada before 1880 but this had withered on the vine and their Canadian history really began in Hamilton in the fall of 1881. Within a decade they had organized well over 300 local Assemblies in more than 100 cities, towns and villages in every province except Prince Edward Island and what is now Saskatchewan. Many of these were short-lived, few surviving the turn of the century, but in 1886 there must have been 160 and in 1887 close to 200.

What is more, the Knights were mainly responsible for the organization of the unskilled, men and women (of which there had previously been very little) and of small town workers. Nor did they neglect the skilled; their first big effort in Canada was organizing 30 Local Assemblies of telegraphers, from Winnipeg to North Sydney, as part of their "National Trade District 45, United Telegraphers of North America". This body, in the summer of 1883, conducted the one genuinely international strike in North American history, against the big telegraph companies on both sides of the border. The strike failed and the Canadian Telegraphers' Assemblies disappeared but the Knights went on to organize almost every conceivable craft, from carpenters to watch-case makers, from stonecutters to musicians. They also organized a great number of "mixed" Assemblies that took in all occupations, skilled and unskilled, and were specially adapted to the needs of small towns where there were not enough workers of any one occupation to make a sizable trade union. The cities and larger towns had their share of Assemblies (in 1887 Toronto had about 50, Montreal over 20, Quebec City perhaps a dozen, Hamilton 15) but there were also single Assemblies, usually mixed, in dozens of small places.

With the fresh burst of organizing activity came a revival of the central organizations, both local and national. Significantly, the new local central bodies almost invariably called themselves "Trades and Labor Councils"; the "trades" were making room for the unskilled. The Toronto Council was formed in 1881 and was followed by Halifax (1882), Hamilton and London (1883), Guelph (1885), Montreal, Oshawa, Brantford and St. Thomas (1886), Winnipeg (1887), and Ottawa, St. Catharines, Peterborough, Vancouver and Victoria (1889). The new national central body, known initially as the "Canadian Labor Congress" but from 1886 on as the Trades and Labor Congress (TLC), was set up in 1883 by a convention summoned by the Toronto Council and for some years was, in fact, an almost wholly Ontario body. The first convention had no delegates from any other prov-

ince; the second, in 1886, had one from Quebec but in 1887 and 1888 the delegates were again all from Ontario. From 1889 on, however, there was always a substantial delegation from Quebec. In 1890, the first western delegates appeared (from British Columbia), and in 1897 the first from the Maritimes (New Brunswick). Until the turn of the century, however, the Congress remained a predominantly Ontario and Quebec organization, not only because most of the unions and the Knights of Labor Assemblies were in those provinces, but because the railway running trades almost invariably held aloof, and because unions and Assemblies were usually too poor to send delegates more than a short distance from home.

From 1880 until the beginning of the twentieth century, the Canadian labour movement was comprehensive, inclusive; the Congress was prepared to accept every kind of genuine labour organization there was—craft or industrial, skilled or unskilled, local, regional, national or international. Even so, its strength was not impressive. In 1901, the Secretary-Treasurer reported that of 871 organizations in the country, only 133, with a total membership of 8,381, had affiliated; and total Congress expenditures in that year were only \$809.88. It was not until the next year that the Congress engaged “the services of a stenographer and typewriter”, which “necessitated the fitting up of a small office with two desks and a chair”.

In these circumstances, it might have been supposed that the policy of taking in everybody would have continued. But in 1896, Canadian trade unionism had to face, for the first time, the problem of reconciling continental solidarity with Canadian autonomy. Most of the TLC affiliates were locals of international organizations but it had confined itself almost wholly to legislative activities and seems to have had no formal contact with the American Federation of Labor (AFL). But in 1896, it complained to the AFL about the application of the American Alien Contract Labor Act to Canadian workers and the ensuing correspondence led, in 1899, to an exchange of fraternal delegates which lasted as long as the Congress.

Meanwhile, the Knights of Labor, which in the late 1880s and early 1890s had played a dominant part in the Congress (supplying the majority of the delegates at the conventions of 1887-89, 1891, 1893 and 1894 and holding the Congress presidency from 1886 to 1891, and in 1894 and 1895), had dwindled to very small proportions in Canada and to almost nothing in the United States. The AFL, on the other hand, was becoming more and more powerful and its unions in Canada more and more numerous and influential. With the turn of the century, they felt in a position to put pressure on the Congress to throw out all organizations “dual” to (rivals of) AFL unions and in 1902 the Congress complied. It lost 23 organizations; it kept nearly 200. There were over 1,000 unions in the country—more than 500 in Ontario, about 160 in British Columbia, slightly fewer in Quebec, about 140 in the Maritimes and nearly 70 on the Prairies.

By its action in 1902, the Congress ranged itself definitely on the side of international unionism. It did not, however, by any means accept the subordinate role the AFL repeatedly tried to impose on it. From 1897 on, it kept trying to get the international unions, or the AFL on their behalf, to turn over to the Congress the dues these unions paid the AFL on their Canadian membership. It finally solved this problem by getting the international unions to affiliate their Canadian membership direct, which they began to do in 1906. The AFL persisted, right down to 1955, in chartering local unions in Canada. It also made repeated unsuccessful attempts to deny the TLC the sole right to charter local Trades and Labor Councils, and it took the Congress 35 years (1910 to 1945) to win complete victory. The Federation was successful in forcing the Congress to expel, in 1939, a whole group of unions belonging to the Congress of Industrial Organizations (CIO) but only after a struggle. A similar attempt in 1946 against the Machinists met a firm and spirited refusal. After this, the Congress decided to assert itself by setting up a series of departments and a full-scale organizing staff and otherwise make plain the status it felt it should enjoy as a fully autonomous Canadian trade union centre.

None of these disputes, however, really disturbed the basic harmony between the TLC and the AFL. The Congress, made up overwhelmingly of international unions

whose American members were affiliated to the Federation, never faltered in its allegiance to international unionism. It knew that in most industries international unions alone had the staff, experience and money to do the job that had to be done.

Meanwhile, however, the whole Canadian labour movement had been "by schisms rent asunder, by heresies distressed". Nationalism, industrial as against craft unionism, revolutionary ideas, and a mixture of nationalism and denominationalism all played their part. The unions expelled by the TLC in 1902 promptly formed the National Trades and Labour Congress of Canada, which, in 1908, became the Canadian Federation of Labour and in 1910 took in the Provincial Workmen's Association of Nova Scotia (which had never affiliated with the TLC). In 1919, just after the Winnipeg general strike and partly as a result of its failure, many western unionists, attracted by revolutionary industrial unionism, broke away from the Congress and the established international unions and formed the One Big Union, which for a time threatened to take away a large proportion of the TLC's membership on the Prairies and in British Columbia but within a few years had ceased to be of any importance. Between 1901 and 1921, small Roman Catholic unions (some of them perhaps former Knights of Labor Assemblies) sprang up in Quebec under the fostering care of the hierarchy and clergy and in 1921 formed the Canadian and Catholic Confederation of Labour (CCCL). In 1927, the Canadian Federation of Labour and other national unions (notably the Canadian Brotherhood of Railway Employees, which had been founded in 1908, had entered the TLC in 1917 and had been expelled from it in 1921) formed the All-Canadian Congress of Labour (ACCL), dedicated to industrial and national unionism. By 1935, purely Canadian unions of one kind or another, including the Communist Workers' Unity League, made up nearly half the total union membership in Canada. Within a few years, however, international unionism reasserted its predominance and for many years now about 70 p.c. of all Canadian unionists have belonged to international unions.

The great debate in the United States in the 1930s over the relative merits of industrial and craft unionism found only faint echoes in Canada. The TLC had both kinds and was most reluctant to expel the Canadian branches of CIO unions but, faced with a virtual ultimatum from the AFL that it must either expel the CIO unions or lose the AFL unions (whose Canadian membership was then far larger), it had really no choice and in 1939 the CIO unions were accordingly cast forth. They at once formed a Canadian CIO Committee, which became the fourth Canadian central organization.

Through all these changes and chances, the four railway running trades (Conductors, Engineers, Firemen and Trainmen) remained unaffiliated with any central body, although locals of every one of them had occasionally sent delegates to Trades and Labor Councils and to TLC conventions, and in 1896 their joint Legislative Board had sent two delegates to the TLC, of whom one was elected to the Congress Executive. The "big four", however, co-operated with each other and two Congress railway unions in a Dominion Joint Legislative Committee.

Late in 1939 came the first step toward unity, although, paradoxically, it created the first effective opposition to the TLC. The ACCL and the Canadian CIO Committee agreed to unite in the Canadian Congress of Labour (CCL), which was set up in 1940, with complete autonomy not only for itself but for the Canadian branches of CIO unions. Contrary to most expectations, this new Congress not only survived but grew and became strong, organizing mass production industries and pioneering in labour research, workers' education and labour public relations. For the next 15 years both Congresses passed resolutions almost every year in favour of unity and, from 1948 on, joint action on various matters became increasingly common. But as long as the two American central bodies were at loggerheads their Canadian counterparts could make little progress towards reunion because of the provisions of the TLC Constitution which, in effect, forbade it to affiliate any union 'dual' to an AFL union. Once the Americans agreed to discuss unity, this blockage disappeared. By the end of 1953 the two Canadian Congresses had appointed a joint Unity Committee, which first (1954) drew up a "No-raiding Agreement"

(under which unions of the rival organizations agreed not to try to steal each others' members) and in 1955 a "Merger Agreement". After ratification by the two Congress conventions, the Merger Agreement came into force and the founding convention of the united Canadian Labour Congress (CLC) took place in April 1956. In January 1957, the small and respectable remnant of the One Big Union joined the new Congress, the Locomotive Firemen followed in February, and the Trainmen in September.

During the Second World War, the CCCL, at first distrusted and denounced by the orthodox unions as a collection of thinly veiled "company unions", shed the narrow denominationalism and French-Canadian nationalism of its early years and by the 1950s had become one of the most militant labour organizations in the country. After numerous battles with the international unions, it also came to co-operate with them for common ends and for a time, in 1956 and 1957, it looked as if the Confederation would come into the CLC. But the negotiations broke down and it stayed out. In 1960, it formally "de-confessionalized" itself and became the Confederation of National Trade Unions (CNTU).

In 1911, there were only 133,000 union members in Canada, and at the outbreak of the First World War still only 166,000. By 1919 the number had more than doubled to 378,000; by 1924 it had sunk to 261,000; and by 1932 it had recovered to 322,000. The depression cut it back to 281,000 but by 1938 it was slightly higher than in 1919. During the Second World War, the immense new industrial development and the organization of the mass production industries again more than doubled the pre-war figure, and in 1949 membership passed the 1,000,000-mark. Since then, growth has been slower; the manual workers in the large industries and the main crafts in the cities and big towns have been pretty effectively organized but the white-collar workers and the small town workers in general have not. From 1958 to 1964, total union membership was almost stationary but in 1965 it started to rise again substantially. CLC unions now (1966) have about three quarters of the 1,600,000 organized workers in Canada; the CNTU has about 10 p.c. (almost all in Quebec) and another 8 p.c. are in international unions unaffiliated with the CLC.

In some respects, Canadian trade unionism has changed out of all recognition since the first Canadian Labor Congress met, over 80 years ago; in others, it has changed very little. The basic aims and basic organization are the same; the change has been chiefly in the legislation the unions want passed. This is partly because so much of what they originally wanted they have long since got—one day's rest in seven, cash payment of wages, bureaus of labour statistics, a Department of Labour, the nine-hour day, workmen's compensation, universal suffrage, free compulsory education; it is partly also because some of the things they once wanted no longer interest them, or even, as with compulsory arbitration (repeatedly demanded down to 1902), have become anathema; but it is also because, on many matters, circumstances, or the general climate of opinion, or both, have changed. This is true of temperance legislation, the single tax, the initiative and referendum, the abolition of Lieutenant-Governorships and the High Commissionership to Britain, the election of the Governor General, demonetization of gold and silver, condemnation of manual training in the schools, transfer of university and college grants to the schools, exclusion of Oriental immigrants and of "pauper" immigrants from Europe. But abolition of the Senate, public ownership of banks and public utilities, minimum wages and shorter hours are all part of the CLC program, as they were of the TLC. So is support for the co-operative movement.

One subject that figured prominently in TLC resolutions from 1886 to 1910 was co-operation with the farmers, who in those days were of course far more powerful, economically and politically, than organized labour. In 1886, the Congress appointed a committee to meet with the Dominion Grange to get some united action on the Factory Act. In 1893, it met with the Grange and the Patrons of Industry (a new farm organization) and adopted a common "platform", set up a standing committee with the Patrons to devise "a scheme for a union of the labor forces (rural and urban)", and provided for a vote by affiliated organizations on allowing the Grange and the Patrons to affiliate. In 1894, the Congress constitution was amended to let the Patrons in; this was deleted in 1895 but in

1896 the convention again resolved that unity with the Patrons was desirable and instructed its Executive to be represented at any meeting the Patrons called. The Dominion election of 1896 pretty well did for the Patrons but the idea of co-operation with farm organizations persisted and in 1910 the Executive recommended appointment of a special committee for this purpose.

From then until 1941, labour seems to have been too preoccupied with more urgent matters to give this one much attention. In that year, the TLC declared that "the well-being of labor is inseparably bound up with the prosperity of the farmer"; expressed its fear that "many farmers" would be "driven off the land" and "forced into competition with workers thereby driving down wages"; and announced its "sympathy and support for the farmers to secure adequate debt protection and parity of farm prices". The CCL declared in favour of co-operation with farm organizations and of government aid in marketing farm produce in any friendly country. The next year the TLC called on the Government to help the farmers meet the shortages of machinery and services. In 1946 both Congresses supported the Alberta farmers' strike; the older declared for "close co-operation" with national and provincial farm organizations; the younger suggested a conference of "Labour organizations and the official spokesman of the farmers" to work toward "complete unity . . . in our demands for social security". In 1947 the CCL declared its support for the farmers "in their attempt to get a fair price for their products", and in 1948 pledged itself to do all it could to promote "farmer-Labour-teacher" co-operation for "common aims and objectives". In 1949 the TLC listened to a speech of greeting from the President of the Alberta Farmers' Union (already affiliated with the Calgary Trades and Labor Council). In 1951 the CCL called on the Government to work out with farm organizations "a just farm price-structure". The next year the older Congress had another speech of greetings, this time from the President of the Interprovincial Farm Union Council, and the other Congress declared for a "National Co-ordinating Committee of Farm and Labour organizations". From 1953 to 1955 both Congresses had farm speakers each year; so did the new CLC at its founding convention in 1956. In February 1954 the two Congresses and the Interprovincial Farm Union Council set up the Farmer-Labour Economic Council, which still exists.

Another subject of great importance which has had a place in almost every meeting of the national central organizations is political action. The Canadian Labor Union dealt with it in 1876 and 1877. The Congress of 1883 unanimously resolved that "the working class of this Dominion will never be properly represented in Parliament or receive justice in the legislation of the country until they are represented by men of their own class and opinions". The 1886 convention reaffirmed this and the members pledged themselves to "use their utmost endeavours, wherever practicable, to bring out candidates for the local and Dominion elections" or, where this was not "deemed advisable", to support the candidate "who pledges himself to vote for most planks of the platform of this Congress". The 1887 convention dropped this last part and adopted the remainder unanimously. The 1889 convention set up a committee to consider forming an "independent political party" and recommended the organizations to nominate candidates where practicable and elsewhere to support the party which was prepared to do most for Labour. In 1892, on motion of two French-Canadian delegates, the convention resolved to "take into consideration the advisability of forming a labor party". Perhaps as part of the consideration, the 1893 convention invited its member organizations to answer four questions: (1) Are you in favor of the present industrial system? (2) Are you in favor of the so-called co-operative system of productive (sic) distribution and exchange? (3) Are you in favor of the communistic system of government? (4) Have you any other system better than the above to suggest? (Strange to say, there were almost no replies.) In 1895, by a very narrow majority, the convention voted to admit "sections of the Socialist Labor Party" (this was repealed in 1896) and resolved that "labor organizations should now unite for independent political action".

But some organizations had already been taking political action. In 1874, Ottawa elected the first Labour M.L.A. in Canadian history. In 1883, the Toronto Trades and

Labor Council nominated two provincial candidates and came close to electing one, and the Hamilton Knights of Labor nominated a candidate who made a respectable showing. In 1886, there were provincial Labour candidates in Toronto, Hamilton, London and Montreal. In 1887, Toronto had a Labour candidate for the Dominion House of Commons and, in 1888, the Montreal Central Labor Council and the Knights of Labor actually elected their candidate in a Dominion by-election in Montreal East. Ottawa had a Labour candidate in the Dominion General Election of 1891.

For the most part, however, until 1906 the unions seem to have relied on meetings of the TLC or its provincial committees with Dominion and provincial Ministers, at which Labour presented its legislative proposals; and from the early 1890s, these meetings have been standard practice. However, by 1899, the Ontario Executive had decided that this was useless and that "the only way to get from the Government what is our right is to elect men in sympathy with the labor cause". In the same year, the Winnipeg Trades and Labor Council and the Winnipeg Labor Party nominated A. W. Puttee for the House of Commons; and the Congress, presided over by Ralph Smith, M.L.A. for Nanaimo, B.C., decided to ask its member organizations whether they favoured an independent Labour party and would back its candidates. The vote was 1,424 in favour to 167 against, with only three organizations out of 44 voting "no". The 1900 convention decided this was enough to justify the Congress in "taking such steps as it deemed advisable to further the progress of such action". It also asked the Nanaimo miners to nominate President Smith for the House of Commons. They did and both Smith and Puttee were elected, with another Labour candidate in Manitoba barely defeated. In 1903 a new Congress President, John Flett, was declaring that the meetings with the Dominion Government were useless and that Canadian Labour should follow the British example and elect Labour men to Parliament. In 1904 he reiterated this and for three years the annual interview was dropped and a parliamentary counsel was substituted to look after Congress interests full-time during the session. In 1903, 1904 and 1905 the conventions passed resolutions favouring independent Labour candidates wherever possible. In 1906, Alphonse Verville, President of the Congress, was elected to the House of Commons for Maisonneuve (Montreal) and declared he hoped for "at least a dozen" Labour members in the next Parliament. The convention responded by adopting what became the political action policy of the TLC for the remainder of its life. The Congress was to endorse sending Labour representatives to Parliament and the Legislatures; its provincial Executives were to summon provincial conventions of trade unionists and sympathizers to set up "the necessary associations"; and the Congress was then to step out of the picture, having "recommended" its own Platform of Principles as the platform for "this independent effort". The result of this was the foundation of a Canadian Labour Party in Ontario, Quebec, Manitoba, British Columbia and Nova Scotia. Though launched with considerable fanfare, its only substantial success was in Ontario in 1919, when eleven Labour candidates were elected and two Labour Ministers entered the Farmer-Labour coalition. A few surviving sections entered the Co-operative Commonwealth Federation (CCF) in 1932 and 1933, along with the Independent Labour Party of Manitoba, which had elected two members to the House of Commons.

The CCL explicitly endorsed the CCF in 1943 and continued to do so throughout the remainder of its existence. It set up political action committees to implement this policy. Its efforts certainly helped the CCF to win power in Saskatchewan in 1944 and to retain it for 20 years; to maintain its position as the official Opposition in British Columbia for most of the past thirty years; to become briefly, although for the second time, the official Opposition in Ontario from 1948 to 1951; to win a few seats in the Nova Scotia Legislature; and to carry some industrial ridings in the House of Commons in the elections of 1945, 1949, 1953 and 1957. But on the whole the results were not what the Congress had hoped.

The CLC at its first convention adopted a compromise policy on political action, leaving its provincial Federations, its local Councils and, of course, its autonomous affiliated unions free to follow whatever line they saw fit and authorizing its Political Education Committee, under the guidance of the Executive Council, to initiate discussions

with other free trade unions, the principal farm organizations, the co-operative movement, the CCF and "other parties pledged to support the legislative programme" of the Congress, in order "to explore and develop co-ordination of action in the legislative and political field". Nothing much came of this until after the Dominion General Election of 1958, when the Congress invited the same groups to enter discussions looking to the formation of a new political party. The farm organizations and the co-operatives (mainly farmer) declined; the CCF accepted. In 1961, the CLC and the CCF, with a variety of sympathizers organized in "New Party Clubs", founded the New Democratic Party.

The Congress did not itself affiliate with the new party (although a number of its unions, with some 200,000 members, did). It remains an independent national trade union centre. The relationship is much the same as that between the British Trades Union Congress and the British Labour Party. Indeed, it is hardly too much to say that the founding of the New Democratic Party represents the triumph of the British tradition of direct political action, brought to Canada by British working-class immigrants in their baggage, over the non-partisan AFL tradition. It is one of the marks of the independence of the Canadian labour movement from the American, with which it is otherwise, in so many ways, so closely associated.

The CLC is wholly independent of the AFL-CIO, which since 1956 has had no branches, no staff and no jurisdiction in Canada (although this does not apply fully to some of its Trade Departments). The Canadian sections of most international unions affiliated with the CLC enjoy complete autonomy. The CNTU and its unions are, of course, purely Canadian and almost entirely French-Canadian, and in the past few years have been engaged in a vigorous competition with the CLC and its affiliates in Quebec. Internationally, the CLC is a member of the International Confederation of Free Trade Unions (ICFTU) and the CNTU of the International Federation of Christian Trade Unions (IFCTU).

In the centennial year 1967, Canadian unions can look back on a record of impressive achievement. A century ago, they were at best barely legal, were few, small, weak and scattered, without even local let alone national central organization, hemmed in by all manner of restrictions, distrusted, despised or hated by most of those in authority, employers and governments alike. Their members worked long hours for meagre wages and under poor conditions. Even Factory Acts had yet to be passed and social security was undreamed of. Now, unions are fully legal, with collective bargaining (long fiercely resisted) legally compulsory. They are many, big and strong; they cover every province, almost every city and town; they have local, provincial and national federations which enable them to speak with one voice to governments. They are important social institutions, accepted even by those who like them least. They take an active and leading part in all manner of activities, whether governmental or private. They are consulted, listened to, represented on boards and commissions and committees of almost every kind. Their members generally work 40 hours a week or less, for wages that are among the highest in the world, and under reasonably good conditions. And it is largely union effort that has won, not only for union members but for hundreds of thousands of people never even eligible for membership, a substantial measure of social security in unemployment, illness, disability or other adversity. The fathers of Canadian unionism, most of them unknown and unsung, perhaps deserve as well of this generation as the Fathers of Confederation itself.

### Union Membership

Union membership in Canada at the beginning of 1966 totalled 1,736,000, the highest on record. It amounted to 30.7 p.c. of the 5,658,000 non-agricultural paid workers in Canada as of January 1966, and 24.5 p.c. of the over-all labour force.

## 33.—Union Membership in Canada, 1938-66

Year	Members	Year	Members	Year	Members	Year	Members
	'000		'000		'000		'000
1938.....	382	1945.....	711	1953.....	1,220	1960.....	1,459

1940.....	362	1947.....	912	1955.....	1,268	1962.....	1,423
1941.....	462	1948.....	978	1956.....	1,352	1963.....	1,449
1942.....	578	1949 <sup>1</sup> .....	1,006	1957.....	1,386	1964.....	1,493 <sup>4</sup>
1943.....	665	1951 <sup>2</sup> .....	1,029	1958.....	1,454	1965.....	1,589
1944.....	724	1952.....	1,146	1959.....	1,459 <sup>3</sup>	1966.....	1,736

<sup>1</sup> Figures for years up to and including 1949 are as at Dec. 31; figures from 1951 are as at Jan. 1. <sup>2</sup> Newfoundland included from 1949. <sup>3</sup> Adjustment in coverage resulted in a net addition of approximately 23,000 members. <sup>4</sup> Includes an addition of approximately 7,000 members resulting from improved coverage.

Almost three quarters of all union members in Canada were in organizations affiliated with the Canadian Labour Congress (CLC); in most cases these unions were also affiliated with the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO). Another 11 p.c. of the total union membership in 1966 was affiliated with the Confederation of National Trade Unions (CNTU). Unaffiliated international and national unions accounted for 12 p.c. and 3 p.c. was in independent local organizations.

The 1966 union membership in Canada showed a net gain of 9.2 p.c. over 1965, the highest percentage increase in any year since 1952. Among international unions operating in Canada, the largest increase was reported by the United Automobile, Aerospace and Agricultural Implement Workers of America, with a gain of 19,300 members. The United Steelworkers of America reported an increase of 10,000 and the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America an increase of 9,800. The highest relative increases were reported by the International Brotherhood of Boilermakers, Iron Shipbuilders, Blacksmiths, Forgers and Helpers with a gain of 2,400 members or 54 p.c. over 1965, the Retail Clerks International Association with an increase of 4,100 members or 34 p.c. and the Canadian Federation of Public Service Employees (Fédération canadienne des employés du service public) with an increase of 33 p.c. over the 20,000 members reported in 1965. Total membership of unions affiliated with the CLC was higher by 101,000 than a year earlier; affiliates of the Confederation of National Trade Unions showed an increase of 38,000, much of the latter being attributable to the affiliation during the year of the Quebec Government Employees Union (Syndicat des fonctionnaires provinciaux du Québec) with the CNTU.

The ten largest unions active in Canada in 1966, listed below in order of size of membership, together accounted for 37 p.c. of total union membership in Canada. All ten registered membership increases over 1965.

Relative Position in 1966	Union and Affiliation	Membership in 1966	Relative Position in 1965
1	United Steelworkers of America (AFL-CIO/CLC)	120,000	1
2	International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (AFL-CIO/CLC)	96,800	3
3	Canadian Union of Public Employees (CLC)	89,400	2
4	United Brotherhood of Carpenters and Joiners of America (AFL-CIO/CLC)	71,700	4
5	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.)	52,200	6
6	International Woodworkers of America (AFL-CIO/CLC)	47,500	5
7	International Association of Machinists and Aerospace Workers (AFL-CIO/CLC)	43,000	7
8	International Brotherhood of Electrical Workers (AFL-CIO/CLC)	42,000	8
9	International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-CIO/CLC)	39,900	9
10	Canadian Brotherhood of Railway, Transport and General Workers (CLC)	33,500	10

International unions, with 1,220,000 members in Canada, continued to comprise just over 70 p.c. of the total union membership in 1966. Another 26 p.c. of Canada's trade union membership was in national and regional unions; directly chartered local unions comprised 1.5 p.c. and independent local organizations something less than 3 p.c.

There were 217 directly chartered unions reported at the beginning of 1966. Of these, 160 locals with 18,000 members were directly chartered by the CLC; another 57, with a combined membership of 6,800, were affiliated with the CNTU but not connected with any of the federations of that organization. There were 127 independent local organizations active at the beginning of 1966, with a total membership of 46,004, representing 2 p.c. of the total Canadian membership.

A complete list of the individual international and national unions, with number of locals and membership in Canada, is carried in the annual Department of Labour publication *Labour Organizations in Canada*, available from the Queen's Printer, Ottawa, price 50 cents.

### Section 8.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the National Employment Service. Table 35 covers strikes and lockouts lasting ten man-days or more. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada. The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

## 35.—Strikes and Lockouts, by Industry, 1965 with Totals for 1961-65

NOTE.—Comparable statistics, except for 1961, are given in the corresponding table of previous Year Books; the latter are available in the Department of Labour annual publication *Strikes and Lockouts in Canada*.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by rough, rocky forest terrain such as the New Brunswick-Quebec border region and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

## PART I.—GOVERNMENT PROMOTION AND REGULATION OF TRANSPORTATION

The Federal Government plays a twofold role in the development of transportation services. One is a promotional role, ensuring the growth and development of the kind of transportation appropriate to the times. The other is a regulatory role, including economic regulation of rates and services and also technical regulation to meet safety requirements and for other purposes. Examples of promotion are the building of canals from the time of Confederation to the present-day Seaway, the underwriting of railway development and branch-line extension, the establishment of Air Canada, the large investments made in airports and aeronautical installations, and the building of the Trans-Canada Highway. Examples of economic regulation include control over transportation tariffs and services that have been carried out by various federal agencies including the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission.

The federal Department of Transport and the various Crown agencies reporting to Parliament through the Minister of Transport have jurisdiction over canals, harbours, shipping, civil aviation and interprovincial and international railways. Interprovincial or international pipelines for carrying gas, crude oil or petroleum products are under the jurisdiction of the National Energy Board. Jurisdiction over for-hire interprovincial or

international highway transport also rests with the Federal Government but these powers are exercised by the provincial highway transport Boards under the federal Motor Vehicle Transport Act of 1954.

Railway regulation was developed in a period when railways enjoyed a virtual monopoly of transport in the country. Measures to protect the public against excessive charges, unjust discrimination and other objectionable monopoly practices, together with measures to ensure safe operations, have over the years subjected railways to the most comprehensive regulation of any Canadian industry. In the intervening years the rapid growth of road, air and pipeline services has ended the railway monopoly for a large part of the total traffic available and has plunged the railways into a highly competitive situation.

A Royal Commission was appointed in 1959, under the chairmanship first of Hon. C. P. McTague and later of M. A. MacPherson, to inquire into the railway rate structure and other problems. Its findings were published in three volumes which appeared between March 1961 and July 1962. The report indicated a need to shift from regulating monopoly to maintaining a balance between the several competing modes of transport.

Legislation based on the findings of the MacPherson Royal Commission is before Parliament at this writing (January 1967) in the form of Bill C-231. The Bill defines a national transportation policy for Canada looking to the achievement of an economic and efficient transportation system making the best use of all available modes of transportation at the lowest total cost. It would create a new body, the Canadian Transport Commission, to carry out the functions now performed by the Board of Transport Commissioners for Canada, the Air Transport Board and the Canadian Maritime Commission. In addition, it would be responsible for regulating the pipeline carriage of commodities other than oil and gas, a comparatively new and promising transportation development. The Bill also defines a framework within which the interprovincial and international motor transport industry could be regulated by the proposed Canadian Transport Commission.

The general intent of Bill C-231 is to create a situation in which the development of the transportation industry and the protection of the public against excessive or discriminatory charges are accomplished in the main by competition between modes rather than by regulation and control. The railways would be relieved of some of the more onerous and outdated restrictions on their freedom to meet competition. On the other hand, a shipper who has no practical alternative to rail shipment could apply to have a maximum rate fixed for his goods by the new Commission. The Bill also provides a procedure to allow the railways, under safeguards for the public interest, to abandon lines and withdraw passenger services where they are no longer needed.

**The Board of Transport Commissioners for Canada.**—The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act, 1903, and was given its present name by the Transport Act, 1938. It was organized on Feb. 1, 1904 and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. The Board, now consisting of a Chief Commissioner, an Assistant Chief Commissioner, a Deputy Chief Commissioner and three Commissioners, has extensive regulative and administrative powers and is also a statutory court of record, so constituted by the Railway Act and recognized as such by other courts. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of a judge of that Court, or by the Governor in Council.\*

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction under the Railway Act and the Transport Act, over transportation by railway and by inland water, and over communication by telephone and telegraph.

\* The Board's judgments are reported in *Canadian Railway Cases* and *Canadian Railway and Transport Cases*, and its judgments, orders, rulings and regulations are published by the Queen's Printer, Ottawa, in what is known as *J.O.R. & R.*

Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company, the Bonaventure and Gaspé Telephone Company and the Yellowknife Telephone Company, and over tolls for express traffic and for the use of international bridges and tunnels.

Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. During the past decade, there has been a succession of applications for authority to make general freight rate and general telephone rate increases.

Under the Transport Act, the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence, the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.

**The Air Transport Board.**—The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950, 1952 and 1966. By the most recent amendment the Board's complement was increased to five members including the Chairman and the staff is comprised of: an Executive Director; a Legal Branch; an Operations Branch which includes a Traffic Division, an Operations Analyst, an International Relations Division, and a Licensing and Inspection Division; an Economics and Accounting Branch; and a Secretary's Branch.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders and Rules relating to all air services or groups of air services, Board Orders relating to individual air services, and Circulars for general guidance and information.

On Oct. 20, 1966, the Minister of Transport tabled in the House of Commons a "Statement of Principles for Regional Air Carriers", which assigned to the Board the responsibility for initiating measures to implement the policy set out therein. In this connection, the Board is introducing regulations respecting domestic and international charter and inclusive-tour operations, subsidies to regional air carriers, and increased financial control, and is reviewing the route structures of regional air carriers.

The Board takes an active part in the work of the International Civil Aviation Organization and, when appropriate, undertakes bilateral negotiations for the exchange of traffic rights. At present, Air Canada and Canadian Pacific Airlines Limited are Canada's designated international scheduled carriers.

**The Canadian Maritime Commission.**—The Canadian Maritime Commission was established by Act of Parliament in 1947 (RSC 1952, c. 38) as a separate department of the Government reporting to Parliament through the Minister of Transport. It is the function of the Commission to "consider and recommend to the Minister from time to time such policies and measures as it considers necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry commensurate with Canadian maritime needs". The Commission is authorized to examine into, ascertain and keep records of all phases of ship operation and to "administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament". The Commission administers the Canadian Vessel Construction Assistance Act (RSC 1952, c. 43) which allows shipowners to benefit from accelerated depreciation and, under given circumstances, from tax relief.

Subsidies are paid by the Federal Government for the maintenance of essential steamship services; the services and the amounts paid for the years ended Mar. 31, 1965 and 1966 are given on p. 838.

**The National Energy Board.**—The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The functions and operations of the Board are covered in the Domestic Trade and Prices Chapter of this volume, Part II, Section 4.

## PART II.—RAIL TRANSPORT\*

### Section 1.—Railways†

Since Confederation the railways of Canada have been the principal transport facility throughout, and beyond, the nation. The two great transcontinental systems, supplemented by a major north-south line on the West Coast and a number of regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes.

The two nation-wide railway companies control a wide variety of Canadian and international transport and communications services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. It is the only railway serving all ten provinces and has completed a branch line to serve the Great Slave Lake area of the Northwest Territories. In addition, it operates a highway service, a fleet of coastal steamships, an extensive express service, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. The Canadian National, jointly with the Canadian Pacific Railway Company, operates a national telecommunications system that employs modern microwave, high-speed teletype and private wire networks, telex, data and weather facsimile transmission and movement of telegrams to any point in the world. The Canadian Pacific Railway Company is a joint-stock corporation also operating a transcontinental railway, an express service, a domestic truck and bus network, a fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic airline servicing points in British Columbia, Alberta and Yukon Territory, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Portugal, Spain and Italy, and a (one flight daily) transcontinental air service between Vancouver and Montreal.

\* The statistical data in this Part were revised in the Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division.

† A special article on operational and technological changes in rail transport appears in the 1965 Year Book at pp. 755-761.

Canadian National's new turbine-driven passenger train will be in service between Montreal and Toronto in mid-1967. It will zip non-stop over the 135 miles between the two cities in about 3½ hours, almost halving the time required two years previously.

The new train is constructed almost completely of weight-saving aluminium, fabricated on aerodynamic lines and climaxes more than 100 years of progress in travelling speed and comfort.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over an 800-mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with several northern branch lines recently completed or under construction. Interline barge and rail connections at Vancouver provide a complete service to any railway point on the Continent. The completion in 1958 of the northern section of this line opened up to development the vast interior of the province, providing access to its rich natural resources and stimulating large-scale investment in new industrial plants throughout the area it serves. The PGE is fully dieselized and controlled by an intricate microwave system from its Vancouver offices.

**Government Aid to Railways.**—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues came later and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1965 amounted to \$1,366,061,500.

For some years the Federal Government has been assisting shippers by bearing a portion of rail transportation costs on certain types of traffic moving between and within specific areas of Canada. Reimbursement to the railways for diminution of revenue resulting from these reductions has been provided through four principal plans: the Freight Rates Reduction Act (SC 1959, c. 27), which reduces for shippers, on certain classes of traffic, the full effect of the last freight rate increase authorized by the Board of Transport Commissioners for Canada in 1958; the East-West Bridge Subsidy, which provides reduced rates to shippers on certain traffic moving between Eastern and Western Canada; the Maritime Freight Rates Act (RSC 1952, c. 174), which reduces rates to shippers on traffic moving within and out of the Atlantic Provinces; and interim payments related to recommendations of the MacPherson Royal Commission. (See also p. 786.)

### Subsection 1.—Railway Operating Statistics

**Track Mileage.\***—Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850s when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870s and 1880s. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

There has been little change in total track mileage since the 1920s. The mileage peak was reached in 1959 and there has since been a gradual decline, new construction being more than offset by abandonment of unprofitable lines. In recent years, the development of a number of large projects in districts far removed from transport facilities and the

\* Statistics for individual railways are given in DBS annual report *Railway Transport, Part III* (Catalogue No. 52-209).

opening up of the Northwest Territories have necessitated the building of branch lines. Those completed up to 1956 are listed in the 1957-58 Year Book, p. 815, and those completed from that year to 1964 are mentioned in subsequent editions. During 1965-66, the CNR completed a 12-mile line from Froomfield spur at Sarnia, Ont., to Courtright, Ont. By the spring of 1965, all track was laid on the Great Slave Lake Railway which extends 377 miles from Roma, Alta., to Hay River, N.W.T., with a 53-mile branch to Pine Point mines. Ballasting and lifting operations were completed by mid-summer 1966. Negotiations took place with several mining companies concerning provision of rail service to base-metal deposits and legislative authority was given for the construction of a 68-mile line from the vicinity of Amesdale to the vicinity of Bruce Lake in the District of Kenora, Ont.; of a 12-mile line from the vicinity of Stall Lake to the vicinity of Osborne Lake in The Pas district of Manitoba; and an 18-mile line from the vicinity of Watrous to the vicinity of Guernsey in the Regina Mining District of Saskatchewan.

The 23-mile Mackenzie addition to the PGE from Kennedy to Mackenzie near the Peace River Reservoir in northeastern British Columbia was completed in 1966, as was the first stage of the Takla Lake extension to Fort St. James. Survey work was under way for the 40-mile extension from Fort St. John to Beaton River on the route to Fort Nelson.

### 1.—Railway Track Mileage Operated, 1900-65

NOTE.—Figures of total mileage of first main track operated for 1835-1954 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

FIRST MAIN TRACK MILEAGE <sup>1</sup>		TRACK MILEAGE BY AREA AND TYPE				
Year	Miles in Operation	Area and Type of Track	1962	1963	1964	1965

1965.....	43,157					

<sup>1</sup> Defined as a single track extending the entire distance between terminals, upon which the length of the road is based.

<sup>2</sup> Newfoundland included from 1950.

<sup>3</sup> Excludes joint track amounting to 55 miles in 1962, 61 miles in 1963, 58 miles in 1964 and 55 miles in 1965.

**Rolling-Stock.**—Table 2 shows the numbers of the various types of freight and passenger equipment in operation in 1959 and in 1965, revealing a generally downward trend over the period; however, these figures do not reflect the offsetting trend toward larger, more efficient cars and locomotives or the steady improvement in speed of movement facilitated by modernized handling and terminal services. Each year hundreds of units, particularly freight cars, are converted and modified to make them suitable for specific types of traffic or are replaced by special-purpose equipment designed for distinctive hauling jobs. The average capacity of all freight cars was 53.8 tons in 1965 compared with 51.1 tons in 1959. Also, although the number of diesel-electric locomotives in service has remained

fairly static over this period, it should be noted than an extensive program of power up-grading has been followed by the railway companies. The combined tractive effort (the force exerted by powered equipment measured at the rim of the driving wheels) of all locomotives in 1965 averaged 58,571 lb. as compared with 53,368 lb. in 1959.

<sup>1</sup> Includes express, baggage, mail and other cars. <sup>2</sup> Duplications included. <sup>3</sup> Includes cabooses miles but excludes miles made in passenger and non-revenue trains. <sup>4</sup> Excludes traffic handled by more than one railway; see Table 4 for details of freight carried.

The tonnage of revenue freight carried (including national loadings and receipts from United States connections) continues to increase year by year, the total in 1965 being 3.8 p.c. higher than in 1964. All the main commodity groups except agricultural products and animal products contributed to the increase. Of the 196,816,887 tons carried in 1965 (excluding freight handled by more than one railway and in intermediate switching), mine products accounted for 41.9 p.c., manufactures and miscellaneous products for 31.9 p.c., agricultural products 15.4 p.c., forest products 9.4 p.c., animal products 0.8 p.c., and less-than-carload freight for 0.6 p.c.; in 1964 the proportions were 39.7 p.c., 30.8 p.c., 18.8 p.c., 9.3 p.c., 0.9 p.c., and 0.5 p.c., respectively.

#### 4.—Commodities Hauled as Freight by Railways, 1961-65

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

**Railway Accidents.**—Accidents shown in Table 5 include all those in which railway trains were involved and accidents on railway property; all passengers injured are included but, for employees, only those who were kept from work for at least three days during the 10 days following the accident are recorded. The classification of accidents used in reporting other DBS statistics treats collisions between motor vehicles and trains as motor vehicle accidents. Therefore, care should be exercised when compiling total accidental deaths of all kinds or when comparing results of accidents of different kinds, such as train and motor vehicle.

## 5.—Persons Killed or Injured on Railways, by Specified Cause, 1963-65

**Finances.**—Tables 6 to 9 give information on capital liability and capital investment in road and equipment, operating revenues and expenses, employees and their earnings for all railways.\* Financial statistics of government-owned railways are given separately and in detail in Subsection 2. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific Railways on Jan. 1, 1956, and for all other common carrier railways on Jan. 1, 1957. In transportation statistics a distinction is made between expenditures and expenses. In the following data, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto, including maintenance and depreciation of the plant used in such service.

### 6.—Capital Liability of Railways, 1956-65

NOTE.—Figures from 1876 will be found in the corresponding table of previous Year Books beginning with the 1927-28 edition.

(Exclusive of Canadian railway capital owned by Canadian railways)

Year	Stocks	Funded Debt	Total <sup>1</sup>	Year	Stocks	Funded Debt	Total <sup>1</sup>
	\$	\$	\$		\$	\$	\$
1956.....	2,572,487,313	1,612,706,551	4,185,193,864	1961.....	2,748,537,919	2,234,316,735	4,982,854,654

Other " ".....	Cr. 27,365	Cr. 189,997	2,446,787	2,831,244	4,006,946
<b>Totals.....</b>	<b>85,684,597</b>	<b>90,595,558</b>	<b>106,168,489</b>	<b>106,982,091</b>	<b>150,916,416</b>
Cumulative investment to Dec. 31.....	6,830,390,939	6,920,986,497	7,027,154,986	7,134,137,077	7,285,053,493

**Revenues and Expenses.**—Railway operating revenues and expenses continue to rise, both reaching peak levels in 1965; increases over 1964 amounted to 3.6 p.c. and 4.1 p.c., respectively, and because the increase in expenses was higher than that in revenues, net earnings decreased.

Of the total operating expenses in 1965 amounting to \$1,291,840,958, those connected with the transporting of persons and property, such as station, yard and terminal services

\* Statistics for individual railways are given in DBS annual report *Railway Transport*, published in six Parts (Catalogue Nos. 52-207—52-212); details on capital liability are given in Part II (Catalogue No. 52-208).

and employees, wharves, fuel, etc., accounted for 38.2 p.c.; equipment maintenance for 22.1 p.c.; road maintenance for 19.4 p.c.; rents and taxes for 6.9 p.c.; expenses connected with traffic soliciting, such as advertising and information, ticket and freight offices, etc., for 2.7 p.c.; and miscellaneous expenses, including incidentals, dining and buffet services, grain elevators, etc., for the remaining 10.7 p.c. These proportions have remained fairly constant in recent years.

### 8.—Operating Revenues and Expenses of Railways, 1956-65

NOTE.—Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

Year	Total Operating Revenues	Total Operating Expenses	Ratio of Operating Expenses to Operating Revenues	Per Mile of Line			Freight- Train Revenue per Freight- Train Mile	Passenger- Train Revenue per Passenger- Train Mile
				Operating Revenues	Operating Expenses	Net Operating Revenues		
	\$	\$	p.c.	\$	\$	\$	\$	\$

1962.....	1,165,296,722	1,119,662,072	96.08	26,002	24,984	1,018	16.91	3.56
1963.....	1,210,209,799	1,149,530,526	94.99	27,051	25,695	1,356	17.04	3.51
1964.....	1,324,422,492	1,241,258,655	93.72	29,857	27,982	1,875	17.51	3.64
1965.....	1,372,304,959	1,291,840,958	94.14	30,927	29,114	1,813	17.82	3.68

*Employment, Salaries and Wages.*—Rail employment in 1965 was down slightly from the preceding year. Over the ten-year period 1956-65, employment dropped 28.1 p.c. but the average annual salary for the industry was 48.3 p.c. higher and total compensation paid was up 6.6 p.c. It should be noted that employee data for 1964 and 1965 were based on a new Uniform Canadian Classification of Railway Employees in which a bi-monthly method of counting was introduced; this method tends to reduce the number of employees by from 2 to 3 p.c. Details are given in DBS publication *Railway Transport, Part VI* (Catalogue No. 52-212).

### 9.—Railway Employees and Their Earnings, 1956-65

NOTE.—Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for 1912-55 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Year	Employees <sup>1</sup>	Total Salaries and Wages	Average Salaries and Wages	Ratio of Total Payroll (charged to operating expenses) to—	
				Operating Revenues	Operating Expenses

<sup>1</sup> Includes employees engaged in communications, express cartage, highway transport (rail) and outside operations.

<sup>2</sup> See text above.

### Subsection 2.—The Canadian National Railway System\*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. More detailed information than can be given here is obtainable from DBS annual report *Canadian National Railways* (Catalogue No. 52-201).

**Financial Statistics.**—The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the 1955 Year Book, pp. 840-847. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of ten years ended Jan. 1, 1962, the Railway was not obliged to pay interest on \$100,000,000 of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced. By the end of 1965, the proportion represented by equity capital in shareholders' account was 51.0 p.c.

\* The Hudson Bay Railway, formerly managed and operated for the Federal Government by the CNR, was absorbed into the Canadian National Railway System on Jan. 1, 1958, to be operated in the same manner as other Canadian Government railway lines. Statistics of the Hudson Bay Railway are therefore included with CNR data for 1958 and subsequent years.

### 10.—Capital Structure of the Canadian National Railway System as at Dec. 31, 1956-65

The financial details presented in Table 12 are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications and highway transport (rail) operations. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents are charged to operating expenses.

### 12.—Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System (Canadian and United States Operations), 1956-65

NOTE.—Figures for 1911-55 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

## Section 2.—Express Companies

There are five express organizations operating in Canada. The Canadian Pacific Express exists as a subsidiary of the Canadian Pacific Railway Company, and the express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System and the Northern Alberta Railways Company is handled by departments of the respective railways. The Railway Express Agency Incorporated of the United States operates mainly over the Canadian sections of U.S. rail lines.

Express companies are organized under federal legislative authority. They are primarily engaged in the rapid transportation of package freight but their services also include custom brokerage, money orders, travellers cheques and other financial paper transactions. Recently, the major railways have introduced a unified service for handling small package express freight and less-than-carload-lot shipments, using the efficient facilities of their rail, piggyback and highway transport services to provide fast and competitive movement of goods. The eventual effects of this changing concept of express service will not be evident statistically until the integration processes are fully completed.

No statistics are available on the volume of express freight handled because much of it consists of parcels and small lots that cannot be classified. Table 14 shows the mileages operated by and the financial statistics of the express agencies for 1961-65 with figures by company for 1965.

## 14.—Summary Statistics of Express Companies, 1961-65

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

Year or Company	Mileages Operated in Canada <sup>1</sup>	Gross Earnings	Operating Expenses <sup>2</sup>	Express Privileges <sup>3</sup>	Net Operating Revenue
	No.	\$	\$	\$	\$
1961.....	65,523	81,098,805	62,674,794	17,875,713	548,298

Northern Alberta Railways.....	1,841	245,218	203,872	41,346	—
Railway Express Agency, Inc.....	1,121 <sup>4</sup>	6,267,259	4,266,747	1,987,113	13,399

<sup>1</sup> Over railways, boat lines, motor carrier and aircraft routes. <sup>2</sup> Includes tax accruals. <sup>3</sup> Amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter. <sup>4</sup> Excludes airline mileages of the Railway Express Agency.

Business transacted by express companies in financial paper is showing a downward trend, declining from \$140,519,846 in 1961 to \$135,659,423 in 1965. The latter was made up of: domestic and foreign money orders, \$107,926,993; C.O.D. cheques, \$17,158,809; travellers cheques, \$10,522,794; and telegraphic transfers, \$50,827. The major decrease was shown in the amount of money orders issued.

The number of persons employed by express companies has also decreased over the five-year period. Employment (full-time and part-time) was provided for 6,565 persons in 1965, to whom \$30,920,877 was paid in salaries and wages; this compared with 10,454 employees in 1961, receiving \$42,405,948 in salaries and wages. Commissions paid dropped from \$2,733,174 to \$1,684,263 over the same period.

## PART III.—ROAD TRANSPORT\*

Highways and motor vehicles are herein treated as related features of transportation. An introductory Section summarizes provincial regulations regarding motor vehicles and motor traffic.

## Section 1.—Provincial Motor Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at pp. 803-804.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

**Operators' Licences.**—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests. Such

\* Except as otherwise indicated, the material in this Part has been revised in the Transportation Division, Dominion Bureau of Statistics.

† Revised according to information received from the respective provincial authorities concerned.

licence is renewable annually in Newfoundland, Prince Edward Island, Nova Scotia, Saskatchewan and the Northwest Territories; in Alberta and British Columbia it is renewable every five years; in New Brunswick, Quebec and Manitoba it is renewable every two years and, in Quebec, expires on the licensee's birth date; in Ontario a licence is issued on a three-year basis and expires on the licensee's birth date. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

**Motor Vehicle Regulations.**—All motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers); in New Brunswick one licence plate is issued to be attached to the front of truck tractors and to the rear of all other vehicles; in Prince Edward Island one plate is issued for motorcycles, to be mounted on rear. In most provinces, in event of sale the registration plates stay with the vehicle but in Quebec, Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia, vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exemption from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days, in British Columbia where it is six months and in Ontario where it is six months for vehicles from other provinces and three months for vehicles registered outside Canada) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

**Traffic Regulations.**—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Prince Edward Island, New Brunswick and Quebec is 60 miles an hour in daytime and 55 at night; in Manitoba and Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highway in Alberta and Manitoba where maximum speeds in excess of the foregoing may be authorized and posted. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour except where 65 miles an hour is authorized. In Ontario maximum speeds vary from 50 to 60 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour; in Saskatchewan and British Columbia where higher speed limits are in effect they are posted. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces, truck speed limits are at least five miles an hour below automobile speed limits. In all provinces and territories, accidents resulting in personal injury or property damage of \$100 or more must be reported to a police officer (in Nova Scotia to the Registrar of Motor Vehicles or to a police officer; in Quebec to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

**Driver Licensing Controls.**—All provinces and territories impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of the car (except in the Northwest Territories), or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

**Safety Responsibility Legislation.**—Each province has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of a serious offence (impaired driving, driving under suspension, etc.) or a person involved directly or indirectly in an accident who is not covered for third-party insurance at the time of the accident (except in Saskatchewan where a judgment must be rendered for damages). The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed; in British Columbia proof of financial responsibility for the future is not required if suspension is for accident only. In Quebec, Saskatchewan and the Yukon Territory, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of \$100 (\$200 in Saskatchewan). In Ontario, the non-resident motorist is not required to carry or produce any form of proof of insurance.

Although safety responsibility legislation has not been enacted in the Northwest Territories, under present requirements the owner of a motor vehicle resident in the Mackenzie Highway region must submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration. In the Yukon Territory, proof of insurance must be supplied before vehicle licence is issued. When the insurance expires or is cancelled, vehicle licence plates must be returned to the Registrar of Motor Vehicles.

**Unsatisfied Judgment Fund.**—Legislation has been enacted in all provinces, except in Saskatchewan and in the Yukon and Northwest Territories, usually in the form of an amendment to the motor vehicle laws of the province or territory, providing for the establishment of a fund, frequently called an Unsatisfied Judgment Fund (in British Columbia, the Traffic Victims' Indemnity Fund), out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. In Newfoundland, Prince Edward Island, Nova Scotia, Quebec and British Columbia the fund is maintained by insurance companies. In all the other provinces, except Saskatchewan where insurance is compulsory, the funds are obtained by the annual collection of a fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued. The fee does not exceed \$1 per annum except that Ontario and Alberta collect \$20 from each uninsured owner of a motor vehicle at the time of registration or transfer and Manitoba collects an additional \$25 from each uninsured owner at the time of registration. A feature of this legislation, which is contained in some provincial statutes, is the provision for the payment of judgments in 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles (the Minister of Finance in Newfoundland and the Administrator of the Motor Vehicles Accident Claim Fund in Alberta); any judgment secured against the responsible authority is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Newfoundland and Nova Scotia, the limits are \$10,000 for one person, \$20,000 for two or more persons injured in one accident and \$5,000 for property damage. In Nova Scotia and New Brunswick the limit is \$35,000 in respect of any one accident. In Prince Edward Island and Quebec the limit is \$35,000 for all damages in the same accident, subject to a deduction of \$200 from all damage to the property of others; damages resulting in bodily injury or death are, up to \$30,000, payable by priority over damages to property and the latter are, up to \$5,000, payable by priority over the former out of the amount of any insurance or other guarantee of indemnity. In British Columbia, the limit is based on the single amount of \$50,000 for any one accident

with the proviso that not more than \$5,000 may be paid on a property damage claim until injury claims up to \$45,000 have been satisfied; the \$35,000 limit exists for hit-and-run accidents but does not apply to payments for property damage. In Ontario and Alberta, the limits are \$35,000 for death or personal injury to one or more persons and \$5,000 for damage to property, subject to a limit of \$35,000 in any one accident. In Manitoba, the limit based on one accident is \$35,000, with judgments arising out of bodily injury or death having priority to the extent of \$30,000 over claims resulting from loss of or damages to property; and judgments arising out of loss of or damage to property having priority to the extent of \$5,000 over judgments resulting from bodily injury or death; the maximum amount payable for a single judgment resulting from loss of or damage to property is \$3,000 subject to a deduction of \$200. In other provinces, lower limits of \$5,000, \$10,000 and \$1,000 are retained. For hit-and-run accidents payments are made for personal injuries only.

**Section 2.—Highways, Roads and Streets**

**Highways and Roads.**—The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1965 the mileage of highways and rural roads in Canada was 448,378, an increase of 9,512 miles over the 438,866 reported in 1964. The 448,378 miles include all roads under provincial jurisdiction, federal roads, and local roads under municipal jurisdiction other than the mileages in census metropolitan areas and urban centres of more than 1,000 population. The latter are given separately under the heading of "Urban Streets", p. 807.

**1.—Highway and Rural Road Mileage classified by Type and by Province, 1965 with Totals for 1964**

NOTE.—Excludes urban streets but includes mileages under jurisdiction of rural and small urban municipalities; excludes mileages of all roads on Indian reservations except those of flexible pavement.

<sup>1</sup> Includes federal administrative costs *re* Trans-Canada Highway amounting to \$200,000 in 1963-64 and \$190,000 in 1964-65.

**Federal-Provincial Road Assistance Programs.**—There are various programs existing between the Federal Government and the provinces relating to highway and road construction, the co-ordination of which is the responsibility of the federal Minister of Transport who reports to Parliament on federal road policy. When major programs of assistance have been decided upon, their implementation is undertaken either by the Department of Public Works or by the sponsoring Department.

*The Trans-Canada Highway.*—The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with data on specifications and route across the participating provinces, in the 1951 Year Book, pp. 631-634. Construction progress and changes in legislation are reported in subsequent editions.

Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces. Construction standards were set and the date of completion fixed. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces, and those sections within the National Parks were to be the responsibility of the Federal Government. Later amendments to the Act increased the extent of federal financial participation and extended the period in which construction costs might be incurred under the Act to Dec. 31, 1967.

Although construction was still going on in a number of sections, the closing in 1962 of the last major gap—in the Rocky Mountains—made it possible for the first time to drive the entire length of the 4,860-mile route. The Trans-Canada Highway was officially opened on Sept. 3, 1962. Provincial mileages are approximately as follows: Newfoundland, 540; Prince Edward Island, 71; Nova Scotia, 318; New Brunswick, 390; Quebec, 399; Ontario, 1,453; Manitoba, 309; Saskatchewan, 406; Alberta, 282; and British Columbia, 552. Length through the National Parks totals 140 miles.

Up to Mar. 31, 1966, contractual commitments for new construction on the Highway amounted to \$997,960,434, of which the federal share was \$625,000,000. Federal payments

to the provinces for prior, interim and new construction totalled \$573,249,165. Paving to specified standards had been completed over a distance of 4,139 miles and 841 bridges, overpasses and other structures of more than 20-foot span had been or were being constructed.

*Roads to Resources.*—The Roads to Resources Program is a national undertaking designed to provide access to areas potentially rich in natural resources. Negotiations, commenced in 1958, led to agreements being signed with all ten provinces that will eventually result in the construction or reconstruction of more than 4,700 miles of road. Progress of the program to Mar. 31, 1966 was as follows:—

Province	Estimated Total Cost	Value of Approved Contracts	Provincial Expenditure	Federal Contribution	Total Mileage	Mileage Completed
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	No.	No.
Newfoundland.....	16.06	15.56	11.77	4.90	322	270

Saskatchewan.....	23.88	16.37	12.96	6.48	811	419
Alberta.....	20.38	15.09	14.83	7.41	416	337
British Columbia..	20.50	15.00	13.72	6.86	321	185
TOTALS.....	182.54	159.47	139.25	66.54	4,738	3,100

As the statement shows, the total estimated cost in most provinces exceeds \$15,000,000, the amount sharable under the agreement, but the federal contribution to each province will remain at \$7,500,000. Private industry shares in the cost of certain roads where construction is of most direct benefit to the company concerned. In any province, the program may consist of as many projects as can qualify for inclusion and for which funds are available. In most provinces, the majority of the roads being built under the program are intended for the purpose of opening up regions to primary resource development and exploration. In Prince Edward Island and Nova Scotia, on the other hand, a number of routes have been chosen for their tourist potential.

*Development Roads.*—The Development Road Program in the Yukon Territory and the Mackenzie District of the Northwest Territories is distinct from the Roads to Resources Program in that the Federal Government is responsible for construction; in the Roads to Resources Program, the contribution of the Federal Government is wholly financial. Maintenance costs of Roads to Resources are borne by the provinces but northern roads costs are shared by the Federal and Territorial Governments on an 85-15 basis. In the Yukon Territory, approximately 1,300 miles of development roads, constructed at a cost of about \$30,000,000, were in use in 1965-66; in the Northwest Territories and Wood Buffalo National Park, about 750 miles costing about \$29,000,000, were in use by the end of March 1966.

In late 1965, a new ten-year road-building program in the Yukon and Northwest Territories was announced, calling for an average expenditure of \$10,000,000 a year, an amount double the annual roads investment in the previous ten-year period. This is the first phase of a 20-year roads network program which should bring all potential areas of resource development in the Territories within 200 miles of the nearest permanent road and thus gradually reduce the North's dependence on seasonal transportation for bulk shipments, reduce the cost of holding large inventories and, as the program progresses, bring the cost of living more in line with that in other parts of Canada. In addition, improved access should result in substantial growth of the tourist industry.

An immediate result of the new program is the speed-up of construction now under way on the 165-mile highway from just south of Hay River to Fort Smith. Also forming part of the new program is the 127-mile area development road being constructed from

Ross River to Carmacks in Yukon Territory. This road is of special interest to tourists since it will provide a route from Watson Lake on the Alaska Highway to and through Carmacks and Dawson, and onward to the Alaska border where it will connect with the State of Alaska Highway System.

Under the previous program, the Federal Government offered to build and pay for mine development roads where two or more companies were developing a mineralized region, and to assist with the cost of mine-access roads and tote-trails. Even so, about 10 p.c. of present exploration and development spending by private industry, which is in excess of \$25,000,000 a year, is spent merely on gaining access to properties. The more extensive road network visualized by the new program, combined with increased federal aid for certain types of access roads, will make it possible for private industry to delegate more capital to actual exploration work.

Types of roads and proportion of federal assistance under the new program are as follows:—

*Permanent Access Roads*—to lead from the nearest permanent road to a resource development about to produce; federal assistance may be up to two thirds of the cost but may not exceed 15 p.c. of the capital invested by a company before commercial production or exploitation.

*Communication and Network Roads*—to provide connecting links between the territories, the provinces, and population centres within the territories; construction and 85 p.c. of maintenance costs will be paid by the Federal Government.

*Area Development Roads*—to lead into resource-potential areas; construction costs will be paid by the Federal Government and maintenance shared by the Federal and Territorial Governments.

*Initial Access Roads (tote-trails)*—low-standard winter or year-round roads to provide an established resource project with access to a network road; federal assistance may be up to 50 p.c. of the cost of the road, which will be maintained by its primary user.

*Roads to Public Airports (land or water)*—to connect airports with the nearest network or local road; construction and 85 p.c. of maintenance will be paid by the Federal Government.

*Construction and Improvement of Trunk Highways in the Atlantic Provinces.*—This program, announced in February 1965, involves an expenditure by the Federal Government of \$30,000,000 over a three-year period to be financed from special appropriations to the Atlantic Development Board. The additional appropriations enable the Board to continue and expand a program of highway assistance begun in 1964 when \$10,000,000 was allocated from the Atlantic Development Fund to meet pressing trunk highway needs in the Atlantic region. Expenditures approved and funds disbursed by the Atlantic Development Board under this program up to Mar. 31, 1966 are included in the statement of approvals and expenditures by the Board for all purposes in Chapter XXIV, Sect. 7.

*Urban Streets.*—Information on urban streets is obtained from the local administrations of all areas with populations over 1,000, all areas located within census metropolitan areas, improvement districts over 1,000 population and rural municipalities over 15,000 population. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report *Road and Street Mileage and Expenditure* (Catalogue No. 53-201).

<sup>1</sup> Includes expenditures on sidewalks, footpaths, bridges and ferries.

## Section 3.—Motor Vehicles

**Motor Vehicle Registrations.**—Registrations continue to increase year by year, a record of 6,698,778 being reached in 1965. Of that total, 5,279,373 were passenger cars—one for every 3.7 persons. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

## 4.—Motor Vehicles Registered, by Province, 1956-65

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-55 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

<sup>1</sup> Includes taxis.

<sup>2</sup> Includes service cars, road tractors, etc.

<sup>3</sup> Included with trucks.

**Apparent Supply of Automobiles.**—The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XXI on Domestic Trade and Prices.

### 6.—Apparent Supply of New Automobiles, 1955-64

<sup>1</sup> Includes Armed Forces vehicles.

**Provincial Government Revenue from Motor Vehicles.**—The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government revenue. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1965 the average cost per motor vehicle for operating taxes and licences was about \$137.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Motive fuel tax rates are given in the Public Finance Chapter, Section 2, Subsection 2 on Provincial Taxes; Federal Government revenue from excise and sales taxes is given in the same Chapter, Section 3, Subsection 3 on Revenue from Taxation.

<sup>1</sup> Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws. <sup>2</sup> Included with other motor vehicles. <sup>3</sup> Licences issued on three-year basis. <sup>4</sup> Licences issued on two-year basis. <sup>5</sup> Included with miscellaneous revenues and therefore in total. <sup>6</sup> Included with passenger automobiles. <sup>7</sup> Not complete.

**Sales of Motive Fuels.**—In order to estimate the total amount of motive fuel purchased in Canada for use in motor vehicles on public streets and highways, it has been necessary to eliminate from the total the amount of motive fuel used for other purposes. Thus, from the total or gross sales, including imports and exports, the following are subtracted to obtain net sales: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds were paid. Net sales are thus defined as sales on which a tax or taxes have been paid in full and are considered to approximate the actual amount of motive fuel purchased in Canada for use on public streets and highways. As shown in Table 8, consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 7.8 p.c. in 1965 and net sales of diesel oil 23.4 p.c.

### 8.—Sales of Motive Fuels, by Province, 1961-65

**Motor Carriers—Freight.\***—Statistics of the common carrier segment of the intercity and rural motor carrier industry have been collected on a continuing basis since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year have created many problems in the collection of statistics, although these are gradually being overcome. Statistics of contract carriers are available from 1958.

\* Statistics are given in more detail in DBS annual report *Motor Carriers—Freight*, Part I (Catalogue No. 53-222) and Part II (Catalogue No. 53-223).

**Passenger Buses.†**—The operations of companies predominantly engaged in passenger bus service are summarized in Table 11. Data refer to the for-hire segment of the industry and only those firms engaged in intercity and rural operations and having an annual gross revenue of \$6,000 or over are covered. Operators predominantly involved in the provision of school bus service are not included nor are airport servicing and urban transit bus operators.

\* Statistics are given in more detail in DBS annual report *Moving and Storage, Household Goods* (Catalogue No. 53-221).

† Statistics are given in more detail in DBS annual report *Passenger Bus Statistics* (Catalogue No. 53-215).

## 11.—Summary Statistics of Intercity and Rural Passenger Bus Companies, 1961-65

NOTE.—Only carriers with an annual gross revenue of \$6,000 or over are included.

**Motor Transport Traffic.\***—Motor transport traffic in all provinces has been surveyed on a continuing basis since 1957. Quarterly sample selections resulted in about 7 p.c. of total registrations being sampled in 1964 compared with 10 p.c. in 1963, the decrease reflecting a 40-p.c. reduction effected in the sample selection; each quarterly sample was spread over three survey weeks with one third of the sample being used for a seven-day period (Sunday through Saturday) per month. Another change instituted in 1964 was the elimination of the urban operations of all trucks, except for miles travelled and amount of fuel used. Table 12 therefore contains for 1963 only the items that are comparable with those for 1964 which are based on the new concept.

Excluding vehicles that do not perform normal transportation services such as cranes, tow trucks, road-building equipment, etc., and government vehicles, the estimated number of trucks licensed in Canada in 1964 was 1,033,000. Almost 30 p.c. were registered in Ontario and nearly one half were registered in the two Provinces of Ontario and Quebec.

Although for-hire trucks made up only 6 p.c. of the total registrations, they accounted for 73.8 p.c. of the net ton-miles performed by all commercial highway trucks because of the greater distances travelled by this type of vehicle and the heavier loads carried; their average yearly mileage was 25,800 compared with 7,100 for all trucks and their average

\* Statistics are given in more detail in DBS annual reports *Motor Transport Traffic* for Canada and the provinces (Catalogue Nos. 53-207—53-214).

load was 12.9 tons compared with 8.1 tons for all trucks. The predominance of heavier vehicles in the for-hire group also explains why their mileage per gallon of gasoline was only 5.6 compared with an average of 8.8 for all vehicles.

Private intercity vehicles accounted for 21.2 p.c. of the total registrations and for 24.1 p.c. of the total net ton-miles performed; their average yearly mileage was 10,400, average load 4.7 tons, and mileage per gallon of gasoline 9.7. Private urban vehicles made up 39.7 p.c. of the total truck population. Almost three quarters of these vehicles were registered in the three Provinces of Ontario, Quebec and British Columbia.

Farm trucks accounted for 33.1 p.c. of the commercial vehicle registrations but, of course, for only a small portion of the total net ton-miles performed. More than three quarters of all trucks registered in Saskatchewan and half of those registered in Manitoba and Alberta were used in farm operations; approximately 70 p.c. of all farm trucks in Canada were registered in the Provinces of Ontario, Saskatchewan and Alberta.

**Urban Transit Systems.**—The collection of statistical information on urban transit systems has been extensively reorganized in recent years because of major changes made in the types of vehicles used for mass passenger movement in urban centres. The current series, which was started in 1956, includes operations of motor buses, trolley coaches, streetcars and subway cars carrying passengers in urban and suburban service.

There are two subway systems in operation in Canada. The Toronto subway was officially opened on Mar. 30, 1954 when 13.33 miles of track were placed in service and later additions brought the length of track to 18.25 miles by Dec. 31, 1965. The first 10 miles of a 16-mile addition under construction since 1963 were completed early in 1966 and the remaining six miles are scheduled for operation in December 1967. The Montreal subway went into public use on Oct. 17, 1966, with an over-all track length of 12.96 miles.

**Motor Vehicle Traffic Accidents.**—There were 398,127 motor vehicle traffic accidents reported in 1965 compared with 363,033 in the previous year. Deaths from such accidents continue their upward trend, numbering 4,652 in 1964 and 4,902 in 1965 as against 2,972 in 1955. Statistics for 1965, reported by place of occurrence, are given by province in Table 14 but it should be noted that, although motorists are required by law to report accidents, complete statistics of these accidents are not available for all provinces. According to DBS vital statistics data, reported on a different basis, there were 4,961 deaths from motor vehicle traffic accidents in 1965.

## PART IV.—WATER TRANSPORT\*

**The Canada Shipping Act.**—Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

## Section 1.—Shipping Facilities and Traffic

## Subsection 1.—Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that Canadian shipping must compete with foreign flag shipping.

Within the region from approximately Havre St. Pierre on the St. Lawrence River upstream to the head of the Great Lakes, the carriage of goods or passengers from one Canadian port to another Canadian port, commonly known as the coasting trade, is restricted to ships registered in Canada. Elsewhere in Canada, the coasting trade is open to all Commonwealth ships.

\* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; and canal traffic and statistics of shipping by the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

**Canadian Registry.**—Under Part I of the Canada Shipping Act, ships in excess of 15 tons net register and pleasure yachts in excess of 20 tons net are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate incorporated under the law of a country of the Commonwealth or of the Republic of Ireland and having their principal place of business in those countries. Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships are given the general designation 'British Ship', and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping at one of the 75 Ports of Registry in Canada.

### 1.—Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1963-65

Note.—Figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

**Shipping Traffic.**—Table 2 shows the number and tonnage of all vessels (except those of less than 15 registered net tons, naval vessels and, for 1962-65, fishing vessels) entering Canadian customs and non-customs ports. Previous to 1957, only the international coastwise movement of cargo in and out of customs ports was recorded.

The freight movement through a large port takes a number of different forms. These include cargoes loaded for and unloaded from foreign countries and cargoes loaded and unloaded in coastwise shipping, i.e., domestic freight moving between Canadian points. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Shipping statistics, which cover traffic in and out of both customs and non-customs ports, do not include freight in transit or freight moved from one point to another within the harbour. Table 4 shows the principal commodities loaded and unloaded in foreign and coastwise shipping at the 12 ports handling the largest cargo volumes in 1965. These ports handled 65.8 p.c. of all Canada's international shipping and 44.7 of the coastwise trade. The specific commodities shown are those transported in volume and often in bulk form.

#### 4.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1965

NOTE.—Only commodities totalling over 50,000 tons are listed.

#### Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for

handling of general cargo, and special equipment for bulk freight of all kinds. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, vessel repair docks.

Nine of the principal harbours of Canada are administered by the National Harbours Board and 11 other major harbours are administered by Harbour Commissioners, which include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours under the direct supervision of the Department of Transport, administered under rules and regulations approved by the Governor General in Council. Harbour masters are appointed by the Minister of Transport for these harbours, their remuneration being paid from fees levied on vessels, under the terms of the Canada Shipping Act.

Throughout the country there are several thousand wharves and breakwaters administered by the Department of Transport under the Government Harbours and Piers Act. These facilities are for the accommodation of cargo ships and commercial fishing craft and are under the general supervision of the Department of Transport District Marine Agents. Wharfingers, whose remuneration is determined as a percentage of wharfage fees collected, are appointed for the direct supervision of these public wharves and floats. They are designed to accommodate the smallest fishing or pleasure craft or the largest ocean-going vessels, according to local requirements. At many ports, in addition to public harbour works operated by the administering authority, there are extensive dock and handling facilities owned by private companies including railway, lumber, pulp and paper, coal, steel, iron ore, petroleum, grain, fish and other industries moving large volumes of bulk materials.

In 1965, the harbours of Canada handled more than 240,000,000 tons of cargo in more than 250,000 vessel arrivals and departures in international seaborne and coastwise shipping.

**National Harbours Board.**—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of St. John's, Halifax, Saint John, Chicoutimi, Quebec, Trois-Rivières, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier and Champlain Bridges at Montreal. Facilities at the larger harbours are listed in Table 5, and summary traffic statistics for 1964 and 1965 in Table 6. Operating revenues and expenditures are given in Table 20, p. 837.

#### 5.—Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1965

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

<sup>1</sup> Under the administration of the National Harbours Board since Jan. 1, 1965.

**Subsection 3.—Canals**

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, together with those under the jurisdiction of the St. Lawrence Seaway Authority, comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

Those included under the two classifications—Seaway canals and Department of Transport canals—are listed in Table 7 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1965, 99,395,117 tons of freight and 23,356 vessels passed through the canals as compared with 93,276,850 tons of freight and 23,155 vessels during 1964. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1965 carried 157,813 passengers as compared with 131,396 in 1964.

<b>Traffic using United States Locks at Sault Ste. Marie.....</b>	<b>10,928,447</b>	<b>82,988,582</b>	<b>93,917,029</b>	<b>11,415,468</b>	<b>82,770,873</b>	<b>94,186,341</b>
<b>Totals.....</b>	<b>32,766,312</b>	<b>117,879,914</b>	<b>150,646,226</b>	<b>36,549,793</b>	<b>118,508,639</b>	<b>155,058,432</b>

Since 1950, the traffic through the Sault Ste. Marie canal (Canadian lock and United States locks) has fluctuated between a high of 123,489,000 tons in 1953 and a low of 70,906,000 tons in 1959; the volume in 1965 was 95,593,250 tons. Throughout the period, the dominant traffic from a tonnage aspect continued to be iron ore, which also reached its highest point in 1953 at 98,658,000 tons, dropped to 47,214,000 tons in 1961 and stood at 65,029,589 tons in 1965. In 1958, wheat replaced soft coal in second place where it has remained, tonnages increasing from 7,478,000 to 11,223,342 during the 1958-65 period; during the same years, other grains usually ranged between 35 p.c. and 60 p.c. of the wheat tonnage, although they were only 28 p.c. of that tonnage in 1961 and 38 p.c. in 1965. Soft coal carried in the 1958-65 period ranged between 6,389,000 tons in 1958 and 7,948,389 tons in 1965.

**Canadian Use of the Panama Canal.**—The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of 5,291,000 long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1965 and passing through the Panama Canal, only 9,000 long tons were destined for Eastern Canadian ports. Similarly, of the 969,000 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 22,000 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 865,493 long tons in the year ended June 30, 1965; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 476,734 long tons.

### Subsection 4.—The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. A special article carried in the 1956 edition (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of construction on the project and another special article carried in the 1960 Year Book (pp. 851-860) covers the story of the Seaway, its new facilities and services and the movement of freight during the second year of its operation.

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and

The St. Lambert lock, where ocean-going vessels flying the flags of many nations begin their journey through the St. Lawrence Seaway and through which they pass again downbound on their way to the sea. The lock is located across from Montreal harbour and close to the site of Expo 67, some of the buildings of which are seen in the background.

operation) of Canadian facilities between Montreal and Lake Erie to allow 27-foot navigation, concurrently with the construction of similar facilities in the International Rapids Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall

Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste. Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection.

Tables 13 and 14 give combined traffic statistics of the St. Lawrence and Welland Canals for the year 1965. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway. On this basis, 5,221 ships carrying nearly 24,796,000 tons of cargo moved upbound through the Seaway in 1965 and 5,337 vessels carrying 35,179,000 tons moved downbound. Ocean-going ships carried 23.0 p.c. of the total cargoes, lakers 76.9 p.c. and other craft 0.1 p.c. There is still evident an imbalance of loading, 33.4 p.c. of the gross registered tonnage of all vessels upbound being in ballast compared with only 23.7 p.c. of the vessels downbound. Of the total tonnage carried upbound in 1965, 19,029,000 tons were domestic cargo and 5,766,872 tons were foreign traffic; downbound, 27,408,000 tons were domestic freight and 7,771,506 tons were carried to and from foreign ports.

### 13.—Summary Statistics of St. Lawrence Seaway Traffic, 1965

(Combined traffic of the Montreal-Lake Ontario Section and the Welland Canal, with duplications eliminated)

On the Montreal-Lake Ontario Section, upbound traffic increased 19.4 p.c. in 1965 over 1964 and downbound traffic 10.2 p.c. The former was accounted for almost entirely by the volume of iron ore shipped from St. Lawrence ports to Hamilton and Lake Erie, and the latter by overseas shipments of wheat. There were 251 more upbound transits and 300 more downbound transits in 1965 than in 1964, indicating a slight increase in the number of vessels using this portion of the Seaway. Bulk cargo comprised 87.1 p.c. of the total traffic through the Section in 1965, the principal commodities through the St. Lawrence canals being iron ore, wheat, corn, fuel oil, barley and bituminous coal. Traffic patterns show that 29.5 p.c. of the total movement was between two Canadian ports, 39.1 p.c. moved between Canadian and United States ports and 31.1 p.c. consisted of foreign trade to and from Canada and the United States. The small remainder was traffic between two ports in the United States.

There were 8,384 transits through the Welland Canal in 1965, with a cargo volume of 19,949,000 tons upbound and 33,472,000 tons downbound; bulk cargo accounted for 91.2 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on "through" trips, there is a substantial amount of local traffic between Great Lakes ports which involves only the Welland Canal. These movements are largely of iron ore, grain and coal. The Welland Canal traffic was 10,073,000 cargo tons greater than that reported for the Montreal-Lake Ontario Section.

Income of the St. Lawrence Seaway Authority for 1965 amounted to \$16,848,181, comprising toll revenue of \$15,480,631 assessed for transits through the Seaway locks between Montreal and Lake Ontario and sundry revenues (rentals, wharfage, bridge revenue, etc.) of \$1,367,550. Total expenses for 1965 amounted to \$12,414,128, of which operation and maintenance expenses amounted to \$10,472,700 and regional headquarters, headquarters administration and engineering expenses amounted to \$3,468,899, less an allocation to non-toll canals of \$369,761 and to construction cost of \$1,157,710.

Pleasure craft locked through the Montreal-Lake Ontario Section canals numbered 353 upbound and 420 downbound in 1965, and those locked through the Welland Canal numbered 143 upbound and 145 downbound.

### Subsection 5.—Marine Services of the Federal Government

The services covered in this Subsection deal with the Canadian Coast Guard and aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection and pilotage service.

**Canadian Coast Guard.**—The Canadian Coast Guard, known by that name only since January 1962, has played a vital part in Canada's maritime economic and industrial development since Confederation. At that time several previously established government marine organizations were brought together as a single marine service, founding the fleet that became the responsibility of the Department of Transport when it was established in 1936.

From a small beginning, the fleet has expanded into an organization consisting of more than 200 vessels of all types, of which nearly 50 are of a larger size. Of these, 31 measure more than 1,000 tons gross. They include 10 fully strengthened icebreakers and eight lighthouse supply-and-buoy ships with icebreaking capabilities. These vessels comprise in numbers the world's second largest icebreaking force. The greater part of the fleet's expansion has occurred within the past few years to meet a new and fast-growing requirement for icebreaker support of shipping activities in the Canadian Arctic during the summer and for commercial shipping in the Gulf of St. Lawrence in the winter. The Department's concern with marine search-and-rescue activities has also increased, not only in the field of commercial shipping but also in connection with the mushrooming public interest in pleasure boating with its attendant safety problems.

The duties of the Canadian Coast Guard are civilian in nature and no armaments are carried on the ships. It maintains and supplies shore-based and floating aids to navigation in Canadian waters, including the Atlantic and Pacific coastal areas, the St. Lawrence River and Great Lakes, the channels of both the eastern and western Arctic, Hudson Bay, the Mackenzie River system and other inland waters. The territory covered is vast and the duties involved are extensive.

Since its beginning, the fleet has carried out icebreaking as one of its important undertakings. In its earliest years, such work was done mainly to aid shipping in eastern port areas and in the St. Lawrence for whatever winter period was allowed by weather conditions and the limitations of ships of that area. Icebreaking has also been carried out through the years at Montreal to prevent floods caused by ice jams in the river. When the development of the sea route from Churchill, Man., to Europe became a factor in the country's maritime economy, icebreaker assistance was extended to commercial shipping using that route. Since 1954, as a result of the opening up of the Canadian Arctic, the Department has handled all icebreaking requirements in these waters, extending to within a few hundred miles of the North Pole.

Arctic operations necessitate ice reconnaissance services, which are carried out by fixed wing aircraft flying out of such ports as Churchill, Man., and Frobisher Bay and Resolute Bay in the High Arctic. These flights are under the direction of the Department's Meteorological Branch and provide information on ice conditions in the sea lanes in all areas where the convoys operate. Helicopters, based aboard the icebreakers, are used for close-range reconnaissance. They carry trained observers provided by the Meteorological Branch and their ability to spot leads through the ice, which cannot be seen from the ship, has resulted in tremendous savings in time for the convoys. The helicopters are also very useful for ship-to-shore personnel movements and for carrying light freight. As an indication of the growth of Arctic re-supply operations handled by the Canadian Coast Guard, the cargo handled, which was approximately 8,000 tons in 1954, had increased to 100,000 tons in 1965.

A Canadian Coast Guard Officer Training College, established in 1965 by the Department of Transport at Sydney, N.S., will provide a four-year course for students who will graduate with certificates as either Marine Engineer, First Class, or Master Mariner. The first class comprised forty cadets from all across Canada.

**Aids to Navigation.**—The Canadian system of aids to navigation is similar to that of other North American countries. Such aids maintained by the Department of Transport for Canadian and contiguous waters consist of buoys, lightships, lighthouses, day beacons, radio beacons and two electronic networks operating on the hyperbolic principle—Loran and Decca. The numbers of danger signals maintained during the years ended Mar. 31, 1965 and 1966 were:—

<i>Type of Signal</i>	<i>1964-65</i>	<i>1965-66</i>	<i>Type of Signal</i>	<i>1964-65</i>	<i>1965-66</i>
	No.	No.		No.	No.
Lights.....	3,447	3,536	Lighted and combination lighted whistling and bell buoys.....	1,582	1,675
Lightships.....	2	2	Unlighted bell and whis- tling buoys.....	43	20
Light-keepers.....	915	895	Electronic signals.....	—	22
Fog whistles and sirens...	54	59	Unlighted beacons and buoys.....	12,786	13,037
Diaphones and tyfons....	271	273			
Mechanical bells and gongs	10	10			
Hand fog horns and bells.	81	66			

All aids incorporating light or sound devices are listed in the Department of Transport annual publication *List of Lights and Fog Signals*. Information on the radio beacons and on Loran and Decca is published in *Radio Aids to Marine Navigation*.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Icebreaking operations are continuous throughout the winter.

**St. Lawrence Ship Channel.**—This channel extends from about 40 miles below Quebec City to the foot of the Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. Widening of the channel to a minimum width of 800 feet, commenced in 1952, is about 69 p.c. completed. This section comprises about 115 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

**Steamship Inspection.**—The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the formulation and subsequent enforcement of regulations concerned with the approval of design of hulls, machinery and equipment of ships; inspection during construction; periodic inspection and the issue

of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; control of pollution of the atmosphere by smoke emitted by ships; control of the powering, equipment and load limits of small vessels; and the certification of marine engineers. The Board also prepares correspondence courses in marine engineering for use in Marine Engineering Schools now controlled by the Department of Labour.

The Chairman and the Board of Steamship Inspection are located at Ottawa and field offices are maintained in the principal ocean and inland ports. A total of 1,872 vessels of Canadian ownership or registry, including 502 passenger ships, 144 new ships built in Canada, 37 ships built outside Canada for registry in Canada, 27 converted or reconditioned ships and 51 vessels registered or owned elsewhere, were inspected during the year ended Mar. 31, 1966.

**Pilotage.**—Pilotage service functions under the provisions of Part VI and Part VIA of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 22 pilotage districts, in nine of which the Minister of Transport is the pilotage authority (see Table 15); in each of the other districts the authority is a local body appointed by the Governor in Council. There are also three districts that are administered jointly by Canada and the United States.

## Section 2.—Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government, that by municipalities and private industry being confined almost entirely to terminal or dockage facilities.

The figures available of federal capital expenditure on waterways are contained in the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. However,

for several reasons, these figures cannot be regarded as an accurate indication of the present worth of the undertakings represented and therefore are not included here; the one exception is the capital expenditure made by the National Harbours Board on facilities under its jurisdiction. The capital values of the fixed assets administered by the Board at Dec. 31, 1965 amounted to \$446,143,009; this figure includes expenditure on all buildings, machinery and durable plant improvements less deductions for depreciation and the scrapping or abandonment of plant, and therefore represents a fair approximation of the present value of the properties. The total amount advanced by the Federal Government to the National Harbours Board for capital expenditure during 1965 was \$3,894,186, distributed as follows: Quebec, Que., \$747,467; and Champlain Bridge (Montreal), \$3,146,719.

**Waterways Expenditure and Revenue.**—Expenditure under this heading (Tables 16 to 18) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 19.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 21. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 20.

## PART V.—CIVIL AIR TRANSPORT

### AN OUTLINE OF THE DEVELOPMENT OF CIVIL AIR TRANSPORT IN CANADA\*

Canada achieved distinction in pioneering early flight when, in 1907, Dr. Alexander Graham Bell formed the Aerial Experimental Association at Baddeck in Nova Scotia, the objective of which was to build "a practical aerodrome or flying machine driven through the air by its own power and carrying a man". This was accomplished when F. W. Baldwin became the first Canadian and the first member of the British Empire to fly a heavier-than-air machine when he flew at Hammondsport, New York, in April 1908. Another member of the Association, J. A. D. McCurdy, was the first man to fly in Canada when, on Feb. 23, 1909, he flew the famous Silver Dart, which he had been instrumental in building, for half a mile from the ice of Baddeck Bay. Unfortunately, these splendid beginnings produced

\* Prepared by J. R. K. Main, former Director of Civil Aviation, Department of Transport, Ottawa.

no immediate results in Canada. Even throughout World War I there was little improvement in the official attitude toward flying, although Canadians by the thousands joined the Royal Flying Corps, the Royal Naval Air Service and, later, the Royal Air Force, where they covered themselves with glory. During 1914-18, nearly a thousand airmen were trained in Canada for service overseas and parts for some 2,900 training aircraft were built in Toronto. But these activities, although receiving some Canadian official support, were primarily under British direction and, at the end of hostilities, training was discontinued and manufacturing of aircraft parts ceased.

However, many of the thousands of aviators returning from overseas, who were determined to fly, bought war-surplus aircraft and started careers in civil flying with glowing enthusiasm but little success. Indeed it was not until about 1925 that the aeroplane had established a firm place in the Canadian economy in such fields as forest protection and aerial photographs. Many other countries were developing inter-city airmail services but Canada, possessing a surplus of railways, deliberately pursued a policy of encouraging the *natural* use of the aeroplane and neglecting the development of inter-urban services.

The policy had compensating features. The "bush" pilots, flying small aircraft equipped with skis or pontoons into the hinterland with little or no navigational assistance, did a mammoth job in contributing to the development of many great mining projects. So great were their accomplishments that, by 1929, they carried as much air freight as was carried by air in any country of the world and, in addition, delivered large volumes of mail to outlying communities. Even during the depression of the 1930s, bush or non-scheduled flying continued to expand, much of it accounted for by activity in gold mining, which had been encouraged by the increase in the price of gold from \$22 to \$35 an ounce. In 1930, 100 licensed carriers were doing business and by 1936 the number had increased to 130. Many of these were small operations but one—Canadian Airways Ltd. with headquarters in Winnipeg, which had amalgamated with several of the larger carriers in 1929-30—offered its services in every part of Canada. The Canadian National and Canadian Pacific Railways held equal shares in Canadian Airways and the expectation was that this company would operate the transcontinental airmail services when such a course of action should become feasible.

Inter-city airmail services in both Eastern Canada and the Prairie Provinces were started in 1930 but economies imposed by the great depression closed these services down in 1932. However, year by year during the depression, the Federal Government had been building and improving airports, installing aids to navigation, training and expanding meteorological services and improving radio and other communication systems until, by 1937, it was practicable to start an inter-city, day-and-night, all-weather service operating on schedule.

During the immediate prewar and early World War II years, several far-reaching changes took place in aviation on the domestic front. Having learned by experience the folly of permitting uncontrolled expansion in the field of rail transport, the Government was determined to sponsor only one major airline company to operate transcontinental and international services and, since the company so favoured would exercise a virtual monopoly in its particular field, the Government was also determined not to permit complete control to pass into private hands. Negotiations along these lines proved unsatisfactory to Canadian Airways Ltd. and to the Canadian Pacific Railway, and steps were taken to create a new company to operate the transcontinental services.

The Department of Transport Act, passed by Parliament in 1936, took the administration of civil aviation away from the Department of National Defence and placed it in the hands of the newly formed Department of Transport. The following year, the Trans-Canada Air Lines Act became law, making provision for the creation of an instrument to operate inter-urban airmail and passenger services to meet both domestic and international requirements. Trans-Canada Air Lines (TCA), as a Government-owned company, was organized with Canadian National Railways the sole shareholder and the new company became Canada's "chosen instrument" in the field of civil aviation.

TCA survey flights began in July 1937 and a scheduled service between Vancouver and Seattle was taken over from Canadian Airways in September of that year. Thereafter, expansion was rapid. An airmail and express service between Lethbridge and Edmonton was started early in 1938; a similar service between Montreal, Ottawa, Toronto, Winnipeg and Vancouver was in operation by December of the same year and in April 1939 a full-scale mail and passenger service from Montreal to Vancouver was inaugurated; in November 1939 a mail service on an experimental basis was extended to Moncton and by February 1940 this, too, was open to passenger traffic; and in August 1940 a full-scale service between Toronto and Windsor by way of London was in operation. International services followed in quick succession—Toronto to New York in May 1941; and Gander to St. John's, Nfld., by way of Moncton, N.B., and Sydney, N.S., in May 1942. Thus, in a period of less than four years, Canada was possessed of a transcontinental day-and-night, all-weather mail and passenger service connecting all its principal cities.

In the meantime, World War II was effecting many changes in Canadian civil aviation. The British Commonwealth Air Training Plan, which was established in Canada in 1939 to train aircrews from every part of the Commonwealth, graduated more than 131,000 personnel before the end of hostilities. This entailed the building or expanding and equipping of some 270 airports and also the setting up of a vast training and administrative organization. A transatlantic ferry service was inaugurated in 1940, funnelling bombers from St. Hubert, and later Dorval, in Quebec through Gander and Goose, Newfoundland, to Britain. Before the end of hostilities, more than 35,000 aircraft had spanned the gap between the two continents and flying the Atlantic had become commonplace.

In January 1942, the Canadian Pacific Railway actively entered the aviation field by buying up ten of the largest private air carriers and incorporating them into one company under the name of Canadian Pacific Airlines (CPA). The new company, for the time being, continued to serve the outlying areas, as had been done by the private companies, and to provide a complementary feeder service to TCA.

In August 1942, TCA added to its duties by taking over the operation of the Canadian Government Trans-Atlantic Air Service on behalf of the Department of Transport. This Service was originally conceived as a wartime measure only, for the purpose of carrying mail to Canadian troops in Europe, although it later evolved into the TCA Trans-Atlantic Service.

By 1944, aviation was playing such a vital part in the Canadian economy that it was necessary to set up a new administrative body—the Air Transport Board—to rationalize its expansion with special regard to public convenience and necessity, rates and tariffs, and the financial aspects of airline operations. The Board of Transport Commissioners had previously performed a somewhat similar function but it was considered advisable to place the affairs of aviation in the hands of a body dedicated solely to that purpose. Questions relating to safety of operation were left in the hands of the Department of Transport. These procedures brought Canada's regulations into line with those in vogue in the most advanced countries in the world, for the country had assumed an almost embarrassing prominent position in world aviation.

At the end of the War, Canada held the fourth world place in aviation, being superseded only by the United States, the U.S.S.R. and Britain. In recognition of this fact, Montreal was selected as the seat of the permanent Headquarters of the International Civil Aviation Organization (ICAO) established by the International Aviation Convention held in Chicago in December 1944: also, ICAO's sister organization, the International Air Transport Association (IATA) which represents all the major world airlines, set up headquarters in Montreal. The latter company was incorporated by a special Act of the Canadian Parliament on Dec. 18, 1945; the status of ICAO was, of course, established by treaty.

The use of company or private aircraft has become quite commonplace for the business executive for whom time is money.

Because of rugged terrain and inaccessibility, the helicopter is of greater value in Canada for the transport of goods and personnel than anywhere else in the world.

The first no-reservations-required AirBus service in Canada operates daily between Edmonton and Calgary.

A private aircraft hangar at Cartierville, about 1932; the Cartierville airport, which is close to Montreal Airport, is now by far the busiest in Canada in the handling of non-scheduled passenger and cargo flights, training aircraft, test flights, etc.

Toronto International Airport leads in the handling of international aircraft movements but is second to Montreal Airport in total aircraft movements, including scheduled and non-scheduled domestic and international flights.

The famous Silver Dart being prepared for flight over Baddeck Bay, N.S., on Feb. 23, 1909.

The 40-passenger North Star was the first pressurized four-engine aircraft to go into service with Air Canada (TCA). The airline purchased 23 of these aircraft, the first in 1947, and they remained its top domestic and overseas carriers until the mid-1950s.

The first Canadian airmail was carried from Ottawa to Toronto on Aug. 27, 1918 in a Curtiss JN-4 (C). It may be said that, for all practical purposes, flight began with the Canadian-built JN-4.

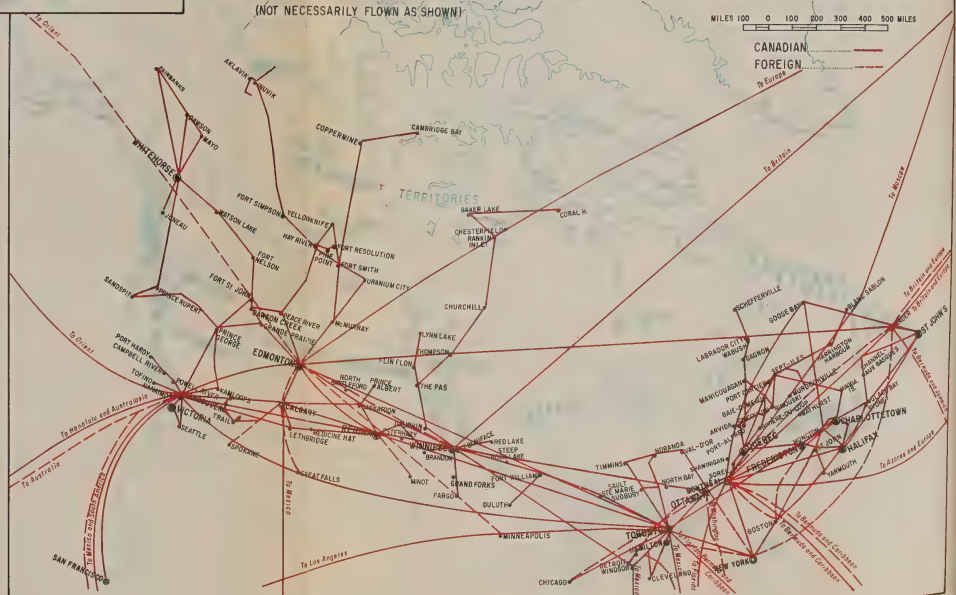

#### A FEW HIGHLIGHTS IN THE HISTORY OF AIR SERVICE IN CANADA

The Fokker Universal seaplane was used extensively in the late 1920s and early 1930s for photo surveying and general barn-storming.

### SCHEDULED AIR ROUTES 1967

(NOT NECESSARILY FLOWN AS SHOWN)

By the end of 1946, TCA had expanded its domestic operations to Victoria, B.C., Blissville, N.B., and Fort William, Ont. Trans-border services were extended from London, Ont., to Chicago and Cleveland; Victoria to Seattle; and Saint John, N.B., and Yarmouth, N.S., to Boston.

The postwar advance in technology was so rapid and so radical that the Department of Transport, which was responsible for providing or ensuring the provision of all necessary ground support services—airports, aids to navigation, air traffic control, weather and communication systems and so on—was at times unable to keep abreast of them. Most Canadian cities had, with government assistance, built airports before the War that were good enough to become links in the transcontinental system. These were leased for training or other military purposes during the War and, as part of the process, most of them were enlarged and considerably improved. However, at the end of hostilities, airline operation had assumed such a high degree of sophistication that the airport proper merely provided a convenient base on which or around which the other services could be concentrated. Complex airport and approach lighting systems; customs, immigration and health facilities; airport and airway traffic control; electronic low-ceiling approach systems; meteorological and pilot-briefing centres and the nervous systems—the radio and electronic complexes necessary to keep this organism alive and alert—required such a high degree of standardization and entailed so much expense that municipal operation of these was out of the question. Some municipalities decided to retain control of the actual airport, including the terminal building, but the majority preferred to leave administration, and occasionally ownership, in Federal Government hands.

This posed, as it still does, a financial problem of some magnitude. Most industrial states possess large populations and small land areas which can be served by one or two first-class airports. The reverse is true in Canada. History and geography have conspired to make Canada the world's great transit area or, if one is militaristically minded, the great buffer state of all time. The airline routes from northern Europe and Asia naturally flow over Canada. As one of the leaders in world aviation and as a signatory to the Chicago Convention, Canada must provide the facilities necessary to ensure safe flight over its vast territory. The challenge has therefore been accepted but entails the construction and maintenance of 10 major airports, with Whitehorse, N.W.T., at one flank and Gander, Nfld., at the other, concerning which no single community can be expected to accept more than a token responsibility; and there are a dozen-and-a-half more which, because of involvement in trans-border operations, merit some federal aid. The resources of the Department of Transport have therefore, been taxed to the limit in meeting these needs. Statistics show that, among the 'have' nations, of which Canada is one, air traffic, since 1945, has doubled approximately every five years. The tasks imposed on the ground-support services involved not only the increasing volume but the vastly increased sophistication needed to maintain that volume; increasing size, speed, ceiling and performance of aircraft called for new equipment, new techniques, even new trades or professions in maintaining ground services.

Postwar changes were swift and relentless. By the end of 1945 the first fleet of aircraft operated by TCA was facing obsolescence and steps were being taken to replace the domestic fleet with the 21-passenger DC-3s. Orders had also been given for a fleet of modified 40-passenger DC-4s, renamed the *North Star*, for both domestic and overseas operations; meanwhile, the Canadian Government Trans-Atlantic Air Service continued in operation using six Lancasters.

Canadian Pacific Airlines never became reconciled to the single chosen-instrument concept for either domestic or international operations, and historical developments soon forced a change of Government policy. The pressure of events during the War had left in the hands of CPA the operation of the Vancouver-Fort St. John and Edmonton-Fort St. John-Whitehorse service, which the CPA subsidiary, Yukon Southern Air Transport, had pioneered. During the last days of the War when all efforts were concentrated on crushing Japan, this had become an exceedingly busy and important line of communication

and, because CPA was organized and equipped to operate over it, the inevitable concomitant was to leave CPA to enjoy its well-earned laurels, exercising what is known in technical jargon as *Grand Father* rights. Thereafter, between second-thinking in policy-making circles in Ottawa and aggressive and enlightened planning on the part of CPA, the latter proceeded to divest itself of the essentially bush operations while concentrating on expansion of the several inter-urban services it possessed. Few of the services were lucrative but by operating them the company maintained both its training standards and its equipment at a level in keeping with that of a first-class airline operator.

A significant modification of Government policy in 1948 enlarged the chosen-instrument concept to cover the operations of CPA in the Pacific north and south and, in July 1949, operations were started to Auckland, New Zealand, and Sydney, Australia via San Francisco, Honolulu and Fiji. This was followed in September of that year by a service to Hong Kong and Tokyo by way of Alaska. Services were extended to Mexico City and Lima, Peru, in 1953. Two years later, a trans-polar route linking Sydney, Australia, to Amsterdam via Vancouver was inaugurated. That same year, CPA relinquished its domestic operations in Quebec and took over the service between Toronto and Mexico City previously operated by TCA. In May 1957, CPA entered the transcontinental field by operating a service between Vancouver, Lisbon and Madrid via Montreal; this, in 1960, was extended to Rome and, in the south, services were extended to Santiago, Chile and Buenos Aires. During 1959 there was a complete change of Government policy and CPA was granted a daily transcontinental service between Vancouver and Montreal via Winnipeg and Toronto.

TCA began a service between Canada and the West Indies in 1948—first running from Toronto to Nassau and Port-of-Spain and later to Bermuda and Barbados, Trinidad and ultimately, in 1953, to Montego Bay, Jamaica. A service from London to Paris was started in 1951 and from London to Dusseldorf, Germany, in 1952. Brussels and Vienna and Zurich were added in 1958 and 1959, respectively. Thus by 1960, TCA services were extended to cover the principal cities of northern Europe. In December of that year the airline made its 1,000th crossing of the Atlantic and was permitted to extend its service from Prestwick to London. It had now assumed full responsibility for what had been the Canadian Government Trans-Atlantic Air Service and this service was officially recognized as a commercial operation.

The general types of aircraft used by the two great companies followed a somewhat similar pattern. DC-3s or similar types with a capacity of about 25 seats and a cruising speed of 180 mph. were introduced around 1945 and the 40-passenger *North Star*, with useful speed of about 270 mph. and a range of 3,500 miles, came into use in 1948. *Constellations*, *Super-Constellations* or *Douglas DC-6Bs* were introduced around 1954 but were soon out-classed by aircraft using a radically new power-plant—the jet-turbine engine. *Vickers Viscounts* or *Bristol Britannias* (propeller-driven jet turbine aircraft) were commissioned during 1956-58 but the most radical change in equipment occurred in 1960 when the DC-8 jet-turbines, with seating capacity for 120 passengers, a range of 4,000 miles and a speed of 560 mph., came into service. One configuration of this aircraft will carry 50,000 lb. of freight and 69 passengers. By agreement, both companies are equipped with the same type of aircraft.

Air Canada (as Trans-Canada Air Lines was re-named in 1964) was the first international airline to operate an entire fleet of jet-powered aircraft. Canadian operators have led in this field and both companies have kept abreast of the best international operators in the safety, efficiency, speed and comfort of their services. These, by international agreement effected through the agency of the International Air Transport Association (IATA), are the only sectors in which competition is allowed. Fares on international services are set by international agreement and domestic fares come under the purview of the Air Transport Board.

Canada's position in air transportation is what would be expected of one of the world's wealthiest nations which is also possessed of one of the world's largest land masses. The two great airline systems shuttle across the settled southern belt making over 50 round trips daily during the peak season, in a matter of five to seven hours, between Vancouver and Montreal. Six large regional operators serve all those settled or partially settled parts of Canada outside of the territories served by Air Canada and CPA and these operations, combined with extensive charter, executive and private flying, place Canada in the world's second position in the use of aircraft.

Air Canada, which holds ninth place as an international carrier, serves most of the United States, the Caribbean area and Northern Europe including the British Isles, using sub-sonic jets, with a frequency varying between 25 return flights weekly to Britain to thrice weekly to Zurich and Vienna. CPA operates across the North Pacific from Vancouver to Tokyo and Hong Kong, and across the central Pacific to Australia and New Zealand by way of Honolulu. Mexico City, Lima, Peru, Santiago, Chile, and Buenos Aires, Argentina, are served on a weekly basis. In effect, Canada, as one of the world's great trading nations, has established the most rapid transportation connections available with the Western Hemisphere, Western Europe and the Eastern Orient.

In international flying alone, Canada stands in fifth place in the world. For all types of flying, domestic and international, Canada's position is third and, as has been mentioned, in domestic flying alone, Canada is in second position.

## Section 1.—Civil Aviation Administration and Policy

**Administration.**—Civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (see p. 787). Part III deals with matters of government internal administration in connection with the Act.

**International Air Agreements.**—The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada therefore took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827. At present, Canada has air agreements with 21 other countries.

**Federal Civil Aviation Policy.**—The intent of Federal Government concern in civil aviation is to provide an efficient and stable service for the Canadian public and the best possible economic framework for the major and regional carriers. In formulating its aviation policy in 1964, three principles were accepted by the Government as basic. The first related to the international field and stated that air services provided by Canadian airlines should serve the Canadian interest as a whole; that these services should not be competitive or conflicting but should represent a single integrated plan which could be achieved by amalgamation, by partnership or by a clear division of fields of operations. The two major airlines agreed that the most effective way to carry out this policy would be by a clear division of their fields of operations so that outside Canada neither airline

would serve any point served by the other. As a result, it was decided that Canadian Pacific Airlines Limited would serve the whole Pacific area, the whole Continent of Asia, Australia and New Zealand, Southern and Southeastern Europe and Latin America, and that Air Canada would serve Britain, Western, Northern and Eastern Europe, and the Caribbean. The only exception to this clear-cut division is that CPA would continue to serve the Netherlands. This division accounts for the whole of the world except Africa and the United States; decisions concerning the former depend on the contemplation of service to that area and those concerning the latter on the completion of new bilateral agreements. Co-operation is maintained between the two carriers in sales and agency relationships, each carrier representing the other outside its own area, so that passengers are encouraged to travel to their destinations by Canadian airlines. Other measures of co-operation, including joint advice to the Government on air negotiations and joint servicing and support arrangements, are maintained.

The second principle concerned the domestic mainline services and stated that, although competition was not to be rejected, development of competition should not compromise or seriously injure the economic viability of Air Canada's domestic operations which represent the essential framework of its network of domestic services, and in the event that competition continues, opportunity should be ensured for growth to both lines above this basic minimum. In 1965 a special aviation consultant was appointed to advise whether the growth of domestic mainline service would permit some further degree of competition and to recommend the procedure for working out such extensions of service. The report of the consultant is now (December 1966) being examined.

The third principle concerned the role of regional air carriers providing scheduled service and their relationship with the mainline carriers. Recommendations were prepared by the two major airlines and the larger regional carriers which resulted in a "Statement of Principles for Regional Air Carriers" tabled in the House of Commons on Oct. 20, 1966, by the Minister of Transport. These principles are summarized as follows:—

- (1) Regional carriers will provide regular route operations into the North and will operate local or regional routes to supplement the domestic mainline operations of Air Canada and CPA; they will be limited to a regional role.
- (2) Greater scope will be allowed regional carriers in the development of routes and services by the following means: (a) where appropriate, limited competition on mainline route segments of Air Canada or CPA may be permitted to regional carriers if this is consistent with their local route development; (b) in a few cases, secondary routes at present operated by Air Canada and CPA may become eligible for transfer to regional carriers; and (c) a larger role will be allotted to regional carriers in connection with the development of domestic and international charter services, inclusive tours and new types of services.
- (3) Greater co-operation between the mainline carriers and the regional carriers will be developed in a variety of fields, ranging from technical and servicing arrangements to joint fare arrangements.
- (4) A limited policy of temporary subsidies for regional routes will be introduced, to be based upon a "use it or lose it" formula.
- (5) Firmer control will be exercised over the financial structure of regional carriers in connection with new licensing arrangements.
- (6) Regional carriers will be assisted with the acquisition of aircraft by development of a scheme for consultation between government and the carriers regarding plans for new aircraft, and by a special investigation designed to explore the possibility of developing a joint approach to this problem on the part of the carriers.

Thus, in the international field, the joint approach to the provision of world-wide service by the two major Canadian carriers is intended to strengthen their position in a very competitive field and provide a better over-all service to the travelling public. In the domestic field, a degree of competition remains to provide the public with the advantages that can result from a competitive atmosphere but avoids excesses of competition, which could be ruinous to the operators and unsatisfactory to the public.

A new National Transportation Act defining and implementing the national transportation policy, including the civil aviation policy, was passed by the Federal Parliament on Jan. 27, 1967 (SC 1967, c. 69).

## Section 2.—Current Air Services

Two major airlines, Air Canada and Canadian Pacific Airlines Limited, form the nucleus of Canada's freight and passenger air service. Current operations of these airlines are discussed briefly below, followed by short outlines of the services provided by independent airlines and a list of Commonwealth and foreign air carriers licensed to operate services into Canada.

Broadly, air transport services in Canada may be grouped into two classes—Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:—

- (1) Regular Specific Point Air Services—operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
- (2) Irregular Specific Point Air Services—operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.
- (3) Charter Air Services—operated by air carriers that offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Board.
- (4) Contract Air Services—operated by air carriers that do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
- (5) Flying Clubs—operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
- (6) Specialty Services—operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.

**Air Canada.**—Continued development in all phases of Air Canada's operations made 1965 an exceptional year in terms of both traffic and revenues. The airline carried 4,753,395 passengers on scheduled and charter services, an increase of 13 p.c. over 1964. The volume of business exceeded expectations, the airline sharing in a general increase throughout the industry, with virtually all major air carriers reporting notable traffic growth. Total scheduled seat miles offered were 5,458,000,000, up 18 p.c., and revenue passenger-miles flown exceeded 3,542,000,000, an increase of 21 p.c. The passenger load factor rose from 63 p.c. in 1964 to 65 p.c. in 1965.

North American passenger-miles flown, which represented almost three quarters of Air Canada's scheduled passenger traffic, increased 17 p.c. as the airline introduced additional services on most major domestic routes; 2,591,000,000 domestic passenger miles were flown in 1965 compared with 2,213,000,000 in 1964. There was a 33-p.c. increase in scheduled transatlantic passenger traffic, following a 23-p.c. increase in 1964 which resulted from new low fares introduced in April of that year. These same low fares, coupled with greater flight frequencies and additional non-stop services, accounted in large measure for the substantial advancement in 1965. On the routes to Florida, Bermuda, the Bahamas and the Caribbean, passenger-miles flown exceeded 307,000,000, up 36 p.c. over 1964.

For the fourth successive year there was a marked expansion in commodity traffic in 1965, air freight increasing 36 p.c. to 56,000,000 ton-miles and surpassing mail as a source of revenue. Air express rose 27 p.c. to 5,500,000 ton-miles. This exceptional growth was the result of added jet freighter capabilities as well as the rapidly growing awareness by the business community of the advantages of air transport in marketing plans.

At the end of 1965, Air Canada was operating over 42,343 unduplicated route miles, linking Canada, the United States, the British Isles, Continental Europe and the Caribbean.

Its fleet consisted of 16 Douglas DC-8 jetliners and 23 Vickers Vanguard and 39 Vickers Viscount turbo-prop aircraft. The company became committed in 1965 to the purchase of 16 new jets to be delivered in 1967. These, together with eight others specified in 1963 and 1964 for delivery in 1966, will increase Air Canada's fleet of jets to 40 by June 1967.

### 1.—Operating Statistics of Air Canada, 1956-65

Year	Traffic				Operating Revenue			Operating Expenditure	Operating Surplus
	Revenue Passenger <sup>1</sup>		Revenue Commodity <sup>2</sup>	Mail	Passenger	Freight and Mail	Total <sup>3</sup>		
	No.	'000 passenger-miles	'000 ton-miles	'000 ton-miles	\$'000	\$'000	\$'000	\$'000	\$'000
1956.....	2,072,912	1,191,784	14,476	8,613	74,479	15,639	91,306	89,197	+2,109
1957.....	2,392,713	1,385,777	15,478	9,855	86,524	16,055	104,996	96,680	+8,315
1958.....	2,785,523	1,625,689	15,395	10,386	101,553	17,407	120,555	108,130	+12,425
1959.....	3,209,197	1,828,902	17,753	10,905	114,339	18,293	134,679	120,120	+14,559
1960.....	3,440,303	2,050,600	20,868	11,593	127,596	19,307	148,987	134,263	+14,724
1961.....	3,712,068	2,481,122	24,091	11,934	143,301	19,466	165,436	143,370	+22,066
1962.....	3,865,408	2,659,578	29,827	12,862	158,792	21,914	183,473	152,821	+30,652
1963.....	3,966,547	2,887,239	35,781	13,859	167,653	24,088	199,390	161,816	+37,574
1964.....	4,189,349	3,150,956	45,590	15,731	177,091	27,684	213,909	175,752	+38,157
1965.....	4,753,395	3,715,635	61,662	17,287	209,926	31,839	250,126	205,138	+44,988

<sup>1</sup> Includes non-scheduled service.

<sup>2</sup> Includes excess baggage and express.

<sup>3</sup> Includes other revenue.

**Canadian Pacific Airlines Limited.**—CPA in 1965 operated a 52,000-mile route pattern linking five continents and major cities of Canada. This included 7,000 miles of Canadian routes, 2,450 miles of which was transcontinental service. In 1965, the airline carried 630,816 passengers, the largest number since the company's formation in 1942. Revenue passenger-miles showed a substantial gain to 1,144,936,000, passing the billion-mile-mark for the first time.

CPA's international routes, 45,000 miles in extent, operate from Vancouver to Honolulu, Fiji, New Zealand and Australia on the South Pacific service; to Japan and Hong Kong via the Great Circle Route across the North Pacific; from Vancouver via Calgary and Edmonton to Amsterdam on the Polar Route, and across the Atlantic from Toronto and Montreal to Holland, the Azores, Portugal, Spain and Italy. A South American network serves Mexico, Peru, Chile and Argentina from Montreal, Toronto and Windsor in Eastern Canada and from Vancouver and Calgary in the West. Within Canada a transcontinental service links Vancouver, Winnipeg, Toronto and Montreal and a network of north-south routes serves British Columbia, the Yukon and western Alberta.

CPA's fleet consists of 17 aircraft—six Douglas DC-8 jets, eight Douglas DC-6Bs and three Douglas DC-3s. Four DC-8 series 63, the so-called 'stretched jets', are on order for delivery during 1967. These aircraft will carry 205 passengers in CPA's seat plan. The international and transcontinental routes are served by DC-8 jets, with the propeller types flying on the shorter domestic lines.

**Independent Airlines.**—In addition to the two major Canadian air carriers—Air Canada and Canadian Pacific Airlines Limited—there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Eastern Provincial Airways (1963) Ltd., Gander, Nfld.; Quebecair, Rimouski, Que.; TransAir Limited, Winnipeg, Man.; and Pacific Western Airlines Ltd., Vancouver, B.C.

Licensed Canadian air carriers operating in Canada as at Mar. 31, 1966 held valid operating certificates covering 38 scheduled, 168 flying training, and 1,595 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation,

act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising, aerial patrol and inspection.

*Eastern Provincial Airways (1963) Ltd.*—This company operates throughout the Atlantic Provinces, eastern Quebec and Labrador. It serves Charlottetown and Summerside in Prince Edward Island; Moncton and Dalhousie in New Brunswick; New Glasgow and Halifax in Nova Scotia; Deer Lake—Corner Brook, Gander and St. John's in Newfoundland; Goose Bay and Saglek in Labrador; and Sept Îles and the Magdalen Islands in Quebec.

The Airways fleet consists of three Handley-Page Dart Heralds, one DC-4, three DC-3s, two PBY Cansos, five DH Beavers and five DH Otters. The Company carries on an extensive air freight service throughout the above areas and conducts many specialty services such as mineral exploration, the transporting of hunting and fishing parties, ambulance service and forestry, seal and ice patrol services.

*Quebecair.*—Quebecair, with head office at Rimouski, offers scheduled services in Quebec and Labrador. The company dates from 1946 and was founded under the name "Le Syndicat d'Aviation de Rimouski". In 1947 the name was changed to Rimouski Airlines and the company inaugurated an air transport service between the shores of the Gulf of St. Lawrence, linking Matane, Mont Joli, Rimouski, Forestville, Baie Comeau and Sept Îles. Until 1953 service was limited to towns and small centres located between Rimouski and Gaspé on the south shore of the St. Lawrence River and between Forestville and Sept Îles on the north shore. In 1953 with the amalgamation of Gulf Aviation the name Quebecair was adopted. With the expansion of mining and industrial activities, Quebecair extended its network to Quebec City and Schefferville in 1955, to Montreal in 1957, to Gagnon and Rivière du Loup in 1959, to Wabush in 1960, to Manicouagan and Saguenay in 1961 and to Murray Bay in 1962.

During 1965, Quebecair acquired Matane Air Services Ltd., Northern Wings Ltd., Northern Wings Helicopters Ltd., and merged its scheduled services with those of its two subsidiaries Northern Wings Ltd. and Matane Air Services Ltd. Quebecair is primarily responsible for the operation of scheduled service by large aircraft; the subsidiaries are charged with handling flights by light aircraft, charters and contract services.

Scheduled services over 4,000 unduplicated miles are operated, and some 30 localities situated in nine economic regions of Quebec and Labrador are served on a daily basis. Points linked are: Montreal, Quebec, Murray Bay (Charlevoix), Rivière du Loup, Rimouski, Mont Joli, Matane, Saguenay, Forestville, Baie Comeau (Hauterive), Manicouagan, Sept Îles, Gagnon, Wabush (Labrador City), Schefferville, Rivière au Tonnerre, Mingan, Havre St. Pierre, Port Menier, Gaspé, Baie Johan Beetz, Aguanish, Natashquan, Kégaska, Gethsémanie, Harrington Harbour, Tête-à-la-Baleine, La Tabatière, St. Augustin, Old Fort Bay, St. Paul and Blanc Sablon.

At the end of 1965, the combined fleet of Quebecair and subsidiaries totalled 32 aircraft: four turbo-prop Fairchild F-27s, nine DC-3s, two Canso PBYs, one Curtiss C-46, three Lockheed 10s, one Beechcraft D-18, two Otter, four Beaver, one Cessna 185, three Bell Helicopters 47-G-2 and two Bell Helicopters 47-G-4.

*TransAir Limited.*—TransAir Limited, with headquarters at the Winnipeg International Airport, operates scheduled, non-scheduled and sportsmen's flights in Manitoba, Saskatchewan, Ontario and the Northwest Territories and charter flights throughout Canada and from Canada to points around the world. The company's scheduled mainline services are operated in three areas: (1) The Prairies—from Winnipeg to Brandon—Regina—Saskatoon—Prince Albert and return and from Winnipeg to Dauphin—Yorkton and return; (2) Manitoba and Central—from Winnipeg to The Pas—Thompson—Churchill and return, from Winnipeg to The Pas—Flin Flon—Lynn Lake and return, and from Winnipeg to Red Lake and return; and (3) Arctic—from Churchill to Rankin Inlet—Baker Lake and return and from Churchill to Rankin Inlet—Coral Harbour and return.

TransAir has 23 aircraft, 16 of which are multi-engine including DC-7C, DC-6, Viscount, DC-4, DC-3, PBY 5A Canso and Beechcraft, stationed at Winnipeg and at the company's major base at Churchill, Man., together with single-engine float and ski-equipped Beaver and Norseman aircraft positioned at Churchill and Norway House, Man., and at Sioux Lookout and Pickle Lake, Ont. Scheduled and charter flights also originate from these bases to many points adjacent to them. The DC-7C is used primarily on international and other long-range charter flights. Since 1961 TransAir has operated from Winnipeg and Churchill, under contract with the United States Air Force, the vertical re-supply flights to the four main sites in the Canadian sector of the Distant Early Warning Line in the extreme Arctic and is now regarded as the largest contract cargo carrier in Canada.

Some of TransAir's main 1965 statistics are: number of employees, 353; number of pilots, 56; unduplicated route miles, 8,074; passengers carried, 85,022; miles flown, 3,521,966; and total revenue ton-miles, 4,680,170.

*Pacific Western Airlines Ltd.*—Pacific Western Airlines Ltd., with head office at Vancouver International Airport, operates over more than 7,700 route miles; its services include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, Yukon Territory, the Northwest Territories including the Arctic islands, and British Columbia. Regularly scheduled mainline services are operated northbound from Edmonton to Dawson Creek, Peace River, McMurray, Uranium City, Fort Smith, Cambridge Bay, Fort Resolution, Hay River, Yellowknife, Fort Simpson, Wrigley, Norman Wells and Inuvik. The first no-reservations-required AirBus service in Canada operates daily between Edmonton and Calgary. The company also operates international charter services.

On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River, Hudson Hope and Port Hardy and local services are operated between Prince Rupert, Stewart, Ford's Cove, Anyox, Maple Bay and Alice Arm in northern British Columbia. In addition, local charter services are operated out of Vancouver, Nelson, Kamloops, Prince George and Prince Rupert and large aircraft charter services are operated from major centres.

Aircraft operated by Pacific Western number 36 and range from DC-7Cs, DC-6Bs, DC-6s, DC-4s, Super 46s and DC-3s on mainline services, to Otters, Beavers, Grumman Goose and Cessnas on charter and freight flights. Revenue passengers carried in 1965 totalled 280,426, freight and express carried amounted to 27,087,600 lb. and miles flown numbered 6,490,931.

**Commonwealth and Foreign Scheduled Commercial Air Services.**—At the end of 1966, there were 23 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences issued for the following international scheduled commercial air services into Canada:—

*Aeronaves de Mexico, S.A.*, operating between Montreal and Toronto (Canada) and Mexico City (Mexico).

*Air France (Compagnie Nationale Air France)*, operating between Paris and other points in Metropolitan France, Montreal (Canada) and Chicago (U.S.A.) and beyond.

*Alitalia (Italian International Airlines)*, operating between Rome and Milan (Italy), Montreal (Canada) and Chicago (U.S.A.).

*American Airlines, Inc.*, operating between Toronto (Canada) and New York/Newark (U.S.A.).

*British Overseas Airways Corp.*, operating between London and Manchester (England), Prestwick (Scotland), Montreal and Toronto (Canada) and Boston, New York and Chicago (U.S.A.), and between London (England), Prestwick (Scotland), Gander (Canada), Bermuda, Nassau, Montego Bay, Barbados and Trinidad.

*Deutsche Lufthansa Aktiengesellschaft (Lufthansa German Airlines)*, operating between Hamburg (Germany) and other points abroad, Montreal (Canada) and Chicago (U.S.A.).

*Eastern Air Lines, Inc.*, operating between the terminals Ottawa and Montreal (Canada) and New York (U.S.A.), and between the terminals Ottawa and Montreal (Canada) and Washington (U.S.A.).

*Irish International Airlines (Aerlínte Éireann Teoranta)*, operating between Shannon (Ireland) and Montreal (Canada).

*KLM Royal Dutch Airlines*, operating between Montreal (Canada) and Amsterdam (Netherlands).

*Mohawk Airlines, Inc.*, operating between Toronto (Canada) and Buffalo (U.S.A.).

*North Central Airlines, Inc.*, operating between Port Arthur/Fort William (Canada) and Duluth/Superior (U.S.A.).

*Northeast Airlines, Inc.*, operating between Montreal (Canada) and Boston (U.S.A.) via Concord, Montpelier-Barre, Burlington and White River Junction (U.S.A.).

*Northwest Airlines, Inc.*, operating between Winnipeg (Canada) and Fargo (U.S.A.) and between Minneapolis/St. Paul (U.S.A.), Winnipeg and Edmonton (Canada), Anchorage (Alaska, U.S.A.) and beyond.

*Pan American World Airways Inc.*, operating between New York and Boston (U.S.A.), Gander (Canada), Shannon (Ireland) and London (England).

*Qantas Empire Airways Ltd.*, operating between Sydney (Australia), San Francisco (U.S.A.) and Vancouver (Canada).

*Sabena Belgian World Airlines*, operating between Brussels (Belgium), Manchester (England), Shannon (Ireland), Montreal (Canada) and New York (U.S.A.).

*Scandinavian Airlines System*, operating between Stockholm (Sweden), Oslo (Norway), Copenhagen (Denmark), Hamburg (Germany) and Montreal (Canada), and New York and Chicago (U.S.A.).

*Seaboard and Western Airlines, Inc.*, operating between points in the United States, Gander (Canada) and points in Europe.

*Swiss Air Transport Company Ltd.*, (Swissair), operating between Zurich and Geneva (Switzerland), Montreal (Canada) and Chicago (U.S.A.).

*United Air Lines, Inc.*, operating between Vancouver (Canada) and Seattle (U.S.A.).

*West Coast Airlines, Inc.*, operating between Calgary (Canada) and Spokane (U.S.A.).

*Western Air Lines, Inc.*, operating between Calgary and Edmonton (Canada) and Great Falls (U.S.A.).

*Wien-Alaska Airlines Inc.*, operating between Whitehorse, Y.T. (Canada) and Fairbanks and Juneau (Alaska, U.S.A.).

**Flying Schools and Clubs.**—At the end of 1965, 86 commercial flying schools were registered as members of the Air Transport Association of Canada. During the year, these schools instructed and graduated 1,756 students as private pilots and 507 students as commercial pilots.

Membership in 33 flying clubs connected with the Royal Canadian Flying Clubs Association numbered 8,806 at the end of 1965. During the year these clubs instructed and graduated 1,297 students as private pilots and 140 students as commercial pilots.

**Weather Services.\***—Weather services are provided by the Meteorological Branch of the Department of Transport to meet the requirements of the general public and all basic economic endeavours such as agriculture, industry, forestry, shipping and fishing. Meteorological service is provided to national and international aviation. The military meteorological requirements in Canada and overseas are met by special co-operative arrangements with the Department of National Defence. The observing and forecasting of ice conditions in navigable waters, both inland and coastal, have expanded rapidly in recent years.

Canadian Weather Offices are linked by 59,700 miles of teletype and radio-teletype circuits, and a national facsimile system 13,700 miles long is used for the distribution of meteorological information in chart form. As of Jan. 1, 1966, the Branch maintained 274 surface synoptic and hourly weather reporting stations, at 34 of which upper air observations are taken, and 2,039 climatological stations, making a total of 2,313 weather reporting stations. One Ocean Weather Station in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement.

**Ground Facilities.**—Aircraft landing areas in Canada are listed in Table 2 and classified by administrative agency as licensed or unlicensed land facilities or seaplane bases, and military airfields. Licensed aerodromes are those that are inspected at regular intervals and meet specific standards, whereas unlicensed aerodromes may not meet the same standards. In addition to aerodromes, a network of radio aids to navigation is maintained to facilitate en route navigation and safe landings under instrument conditions.

\* See also p. 75.

On Apr. 1, 1966, the Department of Transport operated 72 low frequency radio ranges and 46 VHF omni-directional ranges. Instrument Landing Systems in operation totalled 43 and there were 218 non-directional beacons in operation. All of the operating facilities are regularly flight-checked and calibrated by civil aviation inspectors. (See also item on Aeronautical Navigation, pp. 878-879.)

**2.—Aircraft Landing Areas classified by Type of Facility and Operator, by Province, as at Apr. 1, 1966**

**Air Traffic Control.**—The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled airspace and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through airport control, terminal control and area control services. These and other allied services are described below.

*Airport Control Service* provides control service to flights operating in the vicinity of major civil airports where the volume and type of aircraft operations, weather conditions and other factors indicate its need in the interest of flight safety. The service also includes the control of all traffic on the manoeuvring area of the airport. Control is effected by means of direct radiotelephone communication or visual signals. Airport control towers are located at: Whitehorse, Y.T.; Fort St. John, Prince George, Victoria (international), Port Hardy, Abbotsford and Vancouver, B.C.; Lethbridge, Calgary, Edmonton (industrial) and Edmonton (international), Alta.; Saskatoon and Regina, Sask.; Winnipeg (international), Man.; Lakehead, Windsor, London, Toronto Island, Toronto (international), Ottawa (international) and North Bay, Ont.; Montreal (international), Cartierville, Quebec, Baie Comeau and Sept Îles, Que.; Moncton, Fredericton and Saint John, N.B.; Halifax (international) and Sydney, N.S.; and Gander (international) and St. John's, Nfld.

*Area Control Service* provides control service to en route flights operating within controlled airspace during weather conditions that prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Area control centres are located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., Moncton, N.B., Goose Bay and Gander, Nfld. Each centre is connected with control towers, terminal control units, communications stations and operation offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through radio communications facilities available at these stations to all aircraft requiring area control service. Area control centres are also capable of communicating directly with most pilots flying within their control areas. Each area control centre is similarly connected with adjacent centres, including centres in the United States, for the purpose of co-ordinating control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of all aircraft operating in accordance with the Instrument Flight Rules (IFR) and a general record of aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within controlled airspace over Newfoundland, the Gander Control Centre provides control service within the airspace over approximately one half of the North Atlantic Ocean. The Vancouver Area Control Centre also provides control service over the Pacific Ocean within the Vancouver Oceanic Control Area.

*Terminal Control Service* consists of the provision of separation to aircraft operating in accordance with IFR in the vicinity of all controlled airports. This service is normally provided by area control centres but separate terminal control units have been established at Calgary, Alta.; Saskatoon and Regina, Sask.; Lakehead, North Bay and Ottawa, Ont.; Quebec, Que.; and Halifax, N.S.

*Northern Area Control Service*, inaugurated Sept. 26, 1963, is provided by the Edmonton, Winnipeg and Goose area control centres for aircraft flying above 23,000 feet, and is available throughout more than 3,000,000 sq. miles of Northern Canada.

*Radar Control Service* is provided extensively in the control of IFR traffic, both in terminal areas and while en route. Terminal service is provided at Vancouver, B.C.; Calgary and Edmonton, Alta.; Regina and Saskatoon, Sask.; Winnipeg, Man.; Lakehead, Toronto, North Bay and Ottawa, Ont.; Montreal and Quebec, Que.; Moncton, N.B.; Halifax, N.S.; and Gander, Nfld. En route service is provided by area control centres and by one radar unit located at Kenora, Ont. Ground Control Approach Service is provided at Gander, Nfld. and Precision Approach Radar Service is provided at St. John's, Nfld.; Halifax, N.S.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man.; and Vancouver, B.C.

*Flight Information Service* is provided by all air traffic control units, but particularly by all area control centres. It consists of advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refueling and transportation facilities, and other data of assistance to the pilot in planning or conducting a flight.

*Alerting Service* ensures that appropriate organizations are notified of aircraft that may be in need of search and rescue aid. This entails the maintenance and constant supervision of a continuous record of active flights to ensure that failure of an aircraft to arrive at the planned destination notified to air traffic control is detected immediately. The service is available to any pilot who files either a flight plan or flight notification with air traffic control.

*Customs Notification Service* facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary at certain designated customs airports. This is achieved through the prompt notification by air traffic control, at a pilot's request, of the customs officer at the destination airport of the intended arrival and of the need for customs clearance.

*Airspace Reservation Service* provides reserved airspace for specified air operations within controlled airspace and information to other pilots concerning these reservations and military activity areas in controlled and uncontrolled airspace. The Airspace Reservation Co-ordination Office, located at Ottawa, is responsible for co-ordinating all airspace reservations in Canada and in the Gander and Vancouver Oceanic Control Areas.

*Aircraft Movement Information Service* is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

**Airport Activity.**—During 1965, Canada's major civil airports were 18 p.c. busier than in 1964. The 33 Department of Transport tower-controlled airports recorded 2,688,239 aircraft movements (landings, take-offs and simulated approaches) compared with 2,288,504 recorded by the same airports in 1964.

Itinerant movements (excluding purely local traffic) accounted for over 40 p.c. of the total traffic and for the second consecutive year Montreal International Airport ranked first in this category. The five leaders were: Montreal International, 107,255; Toronto International, 99,958; Vancouver International, 84,879; Winnipeg International, 74,787;

and Cartierville, 73,170. From 1961 to 1965 itinerant movements increased more than 23 p.c. from 899,265 to 1,113,507, most of the increase occurring in 1964 and 1965.

Montreal reported the greatest number of scheduled flights in 1965 with 62,540 movements. Toronto was a close second with 62,263, followed by Vancouver with 26,110, Winnipeg with 19,234 and Calgary with 16,222. Toronto led in international flights with 33,888 movements, of which 30,856 were to and from the United States. However, Montreal, which had 30,978 international movements, maintained a commanding lead in traffic between Canada and countries other than the United States with 7,840 movements. Gander and Toronto followed with 3,178 and 3,032 movements, respectively. Local movements, which had been declining each year, showed an impressive increase in 1965 to 1,482,740, largely due to increased flying training.

For the fourth consecutive year, Cartierville was the busiest airport in total traffic, having recorded 295,404 movements including local traffic and simulated approaches (instrument practice runs without touching the ground). Montreal International was second with 211,115 movements, followed by Toronto Island with 210,662, Winnipeg with 198,317 and Ottawa with 167,784.

### Section 3.—Civil Aviation Operation Statistics

Table 3 provides a picture of commercial civil aviation in Canada for the years 1962-65. It shows data on miles and hours flown, traffic carried, fuel and oil consumed, employees, salaries and operating revenues and expenses, by type of service, for Canadian air carriers followed by summary statistics for all Canadian carriers and those foreign companies operating scheduled services in Canada. Figures for Canadian carriers include domestic and international operations, and figures for foreign companies cover miles and hours flown over Canadian territory only, and exclude passengers and goods in transit through Canada. Unit toll service refers to the transportation of passengers or goods at a toll per unit, whereas bulk service is the transportation of passengers or goods at a toll per mile or per hour for the entire aircraft. Other flying services comprise non-transportation services such as flying training, aerial photography and aerial patrol and inspection.

Operating expenses.....\$	277,333,944	294,142,170	315,569,629	368,223,425
<b>Canadian and Foreign Carriers, All Services—</b>				
Hours flown.....No.	642,284	646,956	679,784	801,129
Miles flown.....“	104,851,093	108,282,021	110,138,322	124,448,003
Passengers carried.....“	6,064,074	6,278,298	6,774,652	7,838,539
Goods carried.....lb.	260,084,003	275,899,568	301,494,757	346,176,884

Summary statistics of Canadian and foreign commercial air carriers, by type of carrier, are shown in Table 4 for 1965. For the foreign carriers, hours and miles reported are those flown over Canadian territory only and passengers and goods in transit through Canada are excluded. It is interesting to note that the six scheduled carriers—those holding Class I or Class II licences from the Air Transport Board—accounted for 91 p.c. of all revenue passengers transported by Canadian carriers during 1965. The weight of goods transported by scheduled carriers amounted to approximately 69 p.c. of the total tonnage moved by all Canadian air carriers.

## PART VI.—OIL AND GAS PIPELINES\*

**Oil Pipelines.**—Since the late 1940s large capital expenditures have been made each year for oil pipeline construction. Expenditures in 1965 and 1966 were an estimated \$50,000,000 and \$38,000,000, respectively, and the cumulative total for the period 1950-66 was \$703,000,000.

The prime components of the network of Canadian oil pipelines are the trunk lines of the Interprovincial Pipe Line Company and the Trans Mountain Oil Pipe Line Company. The bulk of the domestic crude oil produced is carried by these lines. The refineries that do not rely on these systems are located in the oil producing regions such as Calgary and Edmonton. The Interprovincial system carries crude oil eastward from Edmonton receiving and discharging oil at various locations along its length. The Trans Mountain system operates similarly westward from Edmonton. Supplying these two trunk lines are pipeline systems funnelling oil from hundreds of fields into storage tanks at the pipeline terminals. Some of these feeder lines are impressive in themselves, not only in size of pipe and in length of route but in the volumes of oil that they transport. Most of the feeder lines are in Alberta, which is to be expected because of the pre-eminent position of that province in oil production. The main pipeline terminal at Edmonton has eight crude oil feeder lines, including the Interprovincial extension to Redwater, as follows:—

Pipeline	Length	Capacity	General Area of Supply Related to Edmonton
	miles	bbl./day	
Britam oil Pipe Line Co.....	410	60,000	south-southeast
Federated Pipe Lines Ltd.....	517	151,000	northwest
Imperial Pipe Line Co.....	311	78,400	southwest
Interprovincial Pipe Line Co.....	31	110,000	northeast
Pam oil Limited (Edmonton Pipeline).....	82	15,000	southeast
Peace River Pipe Line Co.....	691	66	northwest
Pembina Pipe Line Ltd.....	920	154,000	west-southwest
Texaco Exploration Co.....	173	111,000	south

In addition, three pipelines are connected to the Interprovincial at Hardisty, some 100 miles southeast of Edmonton. Here Gibson Associated Oil Ltd. makes deliveries of up to 15,000 bbl. daily of oil from fields just south of the pipeline terminal. Husky Pipe Line Ltd. takes deliveries of condensate and delivers a blended crude, incorporating the light condensate received and the heavy Lloydminster asphaltic crude. The Husky pipeline is a twin line system carrying the condensate to Lloydminster in one line and returning

\* Prepared in the Mineral Resources Division, Department of Energy, Mines and Resources, Ottawa.

the blended oil in the other line, which has a capacity of 15,000 bbl. daily. The third pipeline, Bow River Pipe Line Ltd., carries crudes from the most southerly oil fields in Alberta, those in the Taber area; this line has a capacity of 18,000 bbl. daily. Home Oil Limited operates a pipeline serving refineries in the Calgary area with oil from fields north of the city; the line also has connections with the Rangeland pipeline which, in turn, is linked to the Texaco line going north to Edmonton. Also serving Calgary is the oldest pipeline in Alberta operated by Valley Pipe Line Company which carries crude from the historically important Turner Valley in quantities up to 15,000 bbl. daily.

The Trans Mountain pipeline also has a second receiving terminal in Alberta; west of the community of Edson, the Peace River pipeline makes deliveries to Trans Mountain from fields extending into the northern part of the province. In British Columbia, the Western Pacific Products and Crude Oil Pipelines Ltd. carries crude over a distance of 500 miles from fields near Fort St. John in northeastern British Columbia to the Trans Mountain pipeline at Kamloops; this line has a capacity of 45,000 bbl. daily.

Three main pipeline systems carry crude oil from Saskatchewan fields to the Interprovincial pipeline. The largest is the Westspur Pipe Line Company—Producers Pipelines Ltd. network which delivers crude from the important southeast Saskatchewan producing area across the Saskatchewan—Manitoba border to the Interprovincial terminal at Cromer. Capacity of this system to Cromer is 175,000 bbl. daily. The Westspur—Producers line also carries crude delivered to it by Trans-Prairie Pipelines Ltd. from fields in the Midale area of southeast Saskatchewan. In southwest Saskatchewan, the South Saskatchewan Pipe Line Company takes medium-gravity crude from fields near Swift Current to the Interprovincial pipeline at Regina; this pipeline has a capacity of 70,000 bbl. daily. The third system is the Mid-Saskatchewan pipeline of Royalite Oil Company which carries up to 10,000 bbl. daily of crude oil from the Coleville—Doddsland area to a terminal at Kerrobert.

There is only one pipeline in Manitoba serving the producing fields in the general area of Virden. It carries crude to the Interprovincial terminal at Cromer and has a capacity of 23,000 bbl. daily.

*Interprovincial Pipeline.*—The system of Interprovincial Pipe Line Company is Canada's longest oil pipeline. It incorporates the wholly-owned subsidiary in the United States, Lakehead Pipe Line Company Incorporated, and has a right-of-way length of 2,025 miles including a 95-mile lateral to Buffalo, New York. The system has two complete oil lines between Edmonton and Superior, Wisconsin, and in certain high-traffic sections, such as between Cromer and Gretna, there are three lines. The pipeline can deliver 15 grades of crude oil. Year-end capacity of the various sections of the pipeline are shown below for 1965 and for 1966 after construction is completed.

<u>Section</u>	<u>1965</u>	<u>1966</u>
	bbl./day	bbl./day
Edmonton-Regina.....	364,000	383,000
Regina-Cromer.....	428,000	428,000
Cromer-Gretna.....	575,000	586,000
Gretna-Superior.....	543,000	548,000
Superior-Sarnia.....	434,000	442,000
Sarnia-Port Credit.....	220,000	229,000
Westover-Buffalo.....	36,000	45,000

Interprovincial serves 26 refineries: one at Lloydminster via the Husky pipeline; one at Saskatoon via Saskatoon pipeline from Milden; one at Moose Jaw via B-A Saskatchewan pipeline from Stony Beach; two at Regina; one at Brandon via Anglo Canadian pipeline from Souris; two at Winnipeg via Winnipeg pipeline from Gretna; 11 in the United States either directly or through connecting carriers; three at Sarnia; two at Oakville; one at Clarkson; and one at Port Credit.

*Trans Mountain Pipeline.*—The system of Trans Mountain Oil Pipe Line Company extends from Edmonton to Vancouver via Jasper and has a right-of-way length of 780 miles, including a section of 57 miles in the United States which belongs to a wholly-owned subsidiary of Trans Mountain. The capacity of the system is 250,000 bbl. daily. Trans Mountain serves eight refineries: one at Kamloops; four at Vancouver; and three in the Puget Sound region of Washington State.

*Montreal-Portland Pipeline.*—The Montreal refinery centre is served by a 236-mile pipeline which is a joint system of Montreal Pipe Line Company and its wholly-owned subsidiary in the United States, Portland Pipe Line Corporation. This line takes delivery of tanker-borne crude from Venezuela and the Middle East at Portland, Maine. In 1965, the Company completed a 24-inch pipeline alongside the existing 18- and 24-inch crude oil lines. This provides a very flexible system which can deliver, under existing horsepower, 356,000 bbl. daily to the six refineries at Montreal.

*Product Pipelines.*—Commonly referred to as product pipelines, some of these lines transport refined petroleum products; others move the products of natural gas processing plants such as propane, butane and condensate, some of which are delivered to refineries for the manufacture of refined petroleum products. Consequently, they are a class of pipelines moving various forms of petroleum but not crude oil.

There are three product lines in Eastern Canada, all supplying markets in Ontario with refined petroleum products. Two pipelines, Sun-Canadian Pipe Line Company and Sarnia Products Pipe Line, run from refineries at Sarnia to bulk plants in London, Hamilton and Toronto. Trans Northern Pipe Line Company, once a pipeline carrying products from Montreal to markets in Ontario as far west as Hamilton, now has a two-way flow. Products from Montreal are now delivered only in the area east of Brockville, including the Ottawa valley; products from refineries immediately west of Toronto are carried eastward as far as Kingston.

In Western Canada, the recently constructed Petroleum Transmission Company pipeline carries propane, butane and pentanes plus from a plant at Empress in Alberta to Winnipeg in Manitoba, a distance of 578 miles. The predominant product carried is propane which is also marketed at various locations along the line. Elsewhere in Alberta, the Rimbey Pipe Line Company transports condensate from the Rimbey gas plant and takes deliveries from the Rangeland condensate pipeline to serve areas north of Calgary as far as Edmonton. Also going to Edmonton are three separate pipelines, one each for propane, butane and pentanes plus, running from the Leduc conservation gas plant. Near Calgary, Home Oil Company operates a condensate pipeline to serve refineries there and also to make deliveries to the Rangeland condensate pipeline. There are other condensate pipelines in Alberta, most of which are primarily associated with production and do not serve end users.

*Pipeline Tariffs.*—Typical of the charges to move crude oil are the following pipeline tariffs:—

	Charge	Distance
	cts. per bbl.	miles
Edmonton to Vancouver.....	40.0	718
Edmonton to Regina.....	20.7	438
Edmonton to Winnipeg.....	30.2	847
Edmonton to Sarnia.....	48.0	1,743
Edmonton to Port Credit.....	51.0	1,899
Portland to Montreal.....	10.5	236

*Natural Gas Pipelines.*—Natural gas now accounts for 17 p.c. of Canada's energy requirements and, in addition, large volumes are delivered to markets in the United States. Although relatively small amounts of natural gas are transported in other areas of the world as a liquid under refrigeration, all of the gas used in Canada as well as in North America as a whole is moved by pipeline. Despite the current importance of natural gas,

major gas pipelines were only established in Canada in recent years. It was not until 1958 that natural gas was used in provinces as far east as Quebec. Now, however, there is an extensive network of pipelines serving most centres of population from Vancouver to Montreal and delivering gas to several points of export on the United States border.

Since the mid-1950s, when large-volume gas removal was authorized from Alberta, capital expenditures in gas pipeline construction have constituted a significant proportion of the country's total outlay for transportation facilities. In 1965 and 1966, capital expenditures of \$61,000,000 and \$65,000,000, respectively, were made. The cumulative total in the period 1955-66 was \$1,247,000,000 for gathering and transmission systems with an additional \$796,000,000 for distribution systems.

Pipelines are usually categorized under three headings—gathering lines, transmission lines and distribution lines. The gathering lines are those that take gas from the wells or separators to the field gate or some other specified point. Transmission lines are normally the large diameter pipelines that take gas from gathering lines and deliver it to the distributors principally at the 'city gate'. In total there were 43,360 miles of all types of gas pipeline in operation at the end of 1965, of which 5,029 miles were gathering, 13,806 miles were transmission and 24,525 miles were distribution.

Unlike oil pipeline companies which are common carriers—they transport the oil for a fixed charge—gas pipeline companies, with few exceptions, own the gas that is transported. The principal exception is the Alberta Gas Trunk Line Company which delivers virtually all of the gas exported from Alberta to the provincial boundary where main transmission companies accept delivery. This is an important pipeline system because most of the Canadian gas reserves are in Alberta. The right-of-way distance of Alberta Gas Trunk is 1,788 miles.

Some details of the main transmission systems are contained in the following paragraphs.

*Trans-Canada Pipeline.*—The Trans-Canada pipeline, extending from the Alberta border near Burstall, Sask., makes its way eastward through Saskatchewan and Manitoba to the Ontario Lakehead cities of Port Arthur and Fort William and then follows a broad, northerly-arched route through the clay belt of Ontario, then southward via North Bay to Toronto. There the line divides, one part going to the western region of Ontario and the other, eastward, along the northern shore of Lake Ontario and the St. Lawrence River to Montreal. Lateral pipelines serve communities that are not within the immediate reach of the main pipeline. Trans-Canada is Canada's longest pipeline with a right-of-way distance of 2,384 miles. The maximum amount of gas delivered in any one day by the company in 1965 was 1,249,000 Mcf. Export sales average about 210,000 Mcf. daily.

*Westcoast Transmission Company.*—The supply of gas for Westcoast comes mainly from fields in northeastern British Columbia but significant quantities are gathered in Alberta. The main line from Fort St. John runs in a southerly direction to Vancouver and to the United States border at Sumas, B.C. An extension to its system from the Fort St. John area to the Fort Nelson area permits the pipeline system to pick up gas from the main areas stretching from Dawson Creek to the Yukon-Northwest Territories border. The right-of-way distance of the Westcoast system is 892 miles.

*Alberta Natural Gas Company.*—Although the Alberta Natural Gas pipeline is only 107 miles long it forms part of one of the major gas export pipelines that carries Canadian gas as far south as California. The line extends from the Alberta border through the Crownst Pass to Kingsgate, B.C., where it crosses the International Border and continues through Idaho.

*Other Gas Pipelines.*—There are many other natural gas pipelines operating in Canada. Many are gathering systems and others are exclusively distribution systems. They constitute important sectors of the country's gas pipeline industry, as is evidenced by their aggregate pipeline mileage. To mention a few, Canadian Montana pipeline gathers gas

in the southeastern part of Alberta and transports it southward into the State of Montana; the company also operates a line that purchases gas from Alberta Gas Trunk Lines in the southwestern part of the province. In Saskatchewan the system of the Saskatchewan Power Corporation has gathering, transmission and distribution systems and delivers all of the gas for sale in Saskatchewan; the Corporation had 4,670 miles of pipeline in operation at the end of 1965. Three other systems have gathering, transmission and distribution systems: in Alberta, Canadian Western Natural Gas Company Limited operates in the southern portion of Alberta and Northwestern Utilities in the northern area, the combined length of pipe being 5,072 miles; Union Gas operates mainly in southwestern Ontario picking up gas from some fields that are the oldest in Canada. These and many other systems make up the fast-growing network of gas pipelines in Canada which serves domestic, commercial and industrial customers in all provinces except the Maritimes.

**Oil Pipeline Statistics.\***—There were 45 oil pipeline companies operating in Canada at the end of 1965. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

\* Statistics of oil pipelines are given in greater detail in the DBS monthly report *Oil Pipe Line Transport* (Catalogue No. 55-001).

**Gas Pipeline Statistics.**—As already stated, the natural gas transport industry became a significant factor in the Canadian economy in 1957 with the completion of the first of several extensive pipelines constructed to transport natural gas from the field or processing plant to distribution outlets. Consequently, the distribution industry also greatly increased deliveries to consumers from that time. Tables 3 and 4 illustrate this expansion for the years 1962-65.

### Section 1.—Telecommunications\*

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph, radio and television facilities, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country—its size, its topography, its climate, its small population—which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been met is evidenced by the fact that today Canada possesses communication facilities and services which are second to none in the world and which are somewhat unique in structure. On the one hand there is a group of telephone companies acting in concert to provide national services and on the other there are two railway companies providing services, each of which is national in scope. All companies provide a most comprehensive total communications network. Television relay, data exchange, telex, conventional telephone and standard telegraph transmission services are all included, intermeshed and intertwined. The two railway companies, one publicly and the other privately owned, are in competition with the private and public telephone groups. This mixture of public and private ownership—all in competition—has served Canada well and may provide a prototype of what might work internationally as well.

All around us massive strides are being made in communications—dramatic progress has established a virtually instantaneous global communications system but the advance has only begun. INTELSAT, the International Telecommunications Satellite Consortium, has opened a fresh approach to the management and development of a world-wide communications system and Canada, as a member of INTELSAT, will play a continuing and influential role in the growth of satellite communications. A proposal recently placed before the Federal Government, spearheaded by a private broadcaster and a space electronics company, put forward a domestic satellite system as the communications vehicle to cover the country from coast to coast and from the border to the Arctic—for message traffic, radio and television—and a commercial communications company, studying the

\* Subsections 1 and 3 to 6 of this Section were revised in the Telecommunications Branch of the Department of Transport, Ottawa; Subsection 2 was revised in the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

opportunities opened by satellite communication, plans to build an earth station in Canada to test the practicality of this concept. The federal Department of Transport is conducting an intensive study designed to ascertain the facts and the implications of this new era of communications, which appear to be without limit.

The development of telecommunications in Canada is outlined in the following special article.

### THE DEVELOPMENT OF TELECOMMUNICATIONS IN CANADA\*

From the dawn of history until a mere 150 years ago, communications over any distance was no faster than physical transportation—about 10 miles an hour. The first significant change occurred about 1800 when visual telegraphs or semaphore stations appeared in North America and Europe. In public demonstrations, signals were transmitted at unbelievable speeds up to 170 miles a minute, although under normal conditions they were much slower.

Electric signal systems introduced a new era of speed and accuracy to most parts of the world and 1837 is perhaps the first important date. In that year, Cooke and Wheatstone invented their Needle Telegraph in England and Samuel Morse invented his famous code and telegraph instrument in the United States. Within 10 years, long-distance electric telegraphy became a reality and by 1866 there were 3,000 telegraph offices spread across North America.

About 1847 the insulation of copper conductors became practical and water, the last great barrier, could be crossed. In 1851, a telegraph cable was laid across the English Channel and men began to think of crossing the Atlantic. After a number of failures, this too was accomplished in 1866 and by 1874 telegraph messages could be sent almost anywhere in the world.

#### Pioneering Telephony in Canada

Meanwhile, scientists in many parts of the world had been trying to transmit speech electrically, usually by trying to adapt telegraphic techniques to the problem. However, the idea for the "membrane speaking telephone" came to Alexander Graham Bell in July 1874, when he was on vacation at his father's home in Brantford, Ontario. The idea was verified experimentally (although accidentally during some experiments on a harmonic telegraph) in Boston in 1876 and patented in 1877. In August of the latter year, two "long-distance" telephone calls were made, each over a distance of about four miles. The first was from Brantford to Mount Pleasant and the second from Brantford to the Bell Homestead. What is generally recognized as the world's first long-distance telephone call was made the following week; it was from Brantford to Paris, Ontario, via Toronto, a distance of 68 miles. These calls were made over the telegraph lines of the Dominion Telegraph Company.

In 1877, the first telephone equipment to be leased in the Commonwealth was used to connect the office of the Prime Minister with that of the Governor General in Ottawa and in the following year the first telephone exchange outside the United States was installed in Hamilton, Ontario. One of the original telephones, in working order and connected to a reproduction of the Hamilton exchange, is preserved in the Bell Telephone Company's "Panorama of Telephone Progress" in Montreal. Also in 1878, the manufacture of telephone equipment commenced in Brantford. Bell assigned the Canadian rights to his patents to his father and in 1880 The Bell Telephone Company of Canada was incorporated. By the end of the year, it had 13 exchanges serving 2,100 telephones and service between cities as far apart as Toronto and Hamilton, etc., was available to the public.

## Development of the National System

The inventions of many people in many countries have since contributed to the advancement of telephony and Canada has remained in the forefront in applying these inventions.

In 1900, the common battery system was introduced and began to replace the older magneto systems and also made possible the development of smaller, more attractive and efficient telephone sets. Several automatic switching systems were introduced around the turn of the century with limited success. However, it was not until the early 1920s that satisfactory systems for large offices were installed using the Strowger Step-by-Step system—first invented in 1886. This system became the workhorse of the world and even today serves more subscribers than any other system. But Step-by-Step has its limitations and these became apparent as the Continent moved toward Direct Distance Dialing. The planning of an economical long-distance network entails a choice of routes for a call. There is usually a most direct route, which will be the first choice, backed up by one or more less-direct routes in case the preferred route is busy. In Step-by-Step systems, the digits dialed by the subscriber are used up as fast as he dials them and if the caller ends up being connected to a busy circuit, these digits cannot be retrieved and used to select an alternate route. Another disadvantage with Step-by-Step is that the heavy sliding contacts tend to be noisy, even with the best of maintenance, and the noise level builds up and becomes objectionable as circuits become longer and more switches are added.

In 1950, a new and completely different type of switching system, called Crossbar, was introduced in North America. Instead of the subscriber having direct control over the switches that set up the talking path as in Step-by-Step, the digits dialed by the subscriber are routed to a temporary memory that is a part of the control equipment. This information is retained while other parts of the control equipment search up to five alternate routes to complete a call. The system derives its name from the Crossbar switches used in the talking path. These switches require almost no maintenance and are not as noisy as the older Step-by-Step switches. There is another significant difference—when the call is completed, the information is removed from the temporary memory and the control equipment is ready to serve another subscriber. The control equipment is available to all subscribers and hence Crossbar systems are said to use the "common control" principle.

Crossbar systems were first introduced to Canada for operator-dialing of long-distance calls in 1955 and for subscriber-dialed local calls in 1956 and now have found general application across the country for all sizes of offices. It is undoubtedly true that, without this switching development, Direct Distance Dialing by subscribers across the whole of the Continent could never have become what it is today.

It is equally true, of course, that gigantic strides had to be taken in the development of transmission equipment. Less than 10 years after the first demonstration of the telephone at Brantford, some 3,000 miles of "long-distance" telephone lines were in service and double that mileage in the following five years. This rapid early growth was the result of technological developments which today may seem elementary. New and better telephone transmitters had been developed by 1885 and the same year copper wire was first used instead of iron wire on long-distance lines. A new industry, made possible by intensive research, was being created.

In 1890 the single-wire circuit with ground return was replaced by two-wire circuits and in the following few years the Loading Coil and the Phantom Circuit increased the range and capacity of long-distance networks.

Telephone calls over unlimited distances were made possible only by the invention of the electron tube. In 1915 the first commercial application was made on a transcontinental telephone line in the United States and the same year a combination of telephone and radio facilities was used to transmit speech across the Atlantic. The following year, 1916, the first telephone call between Montreal and Vancouver was made over a combination of Canadian and United States lines. On the Diamond Jubilee of Canada's Confederation in

1927, the Governor General and the Prime Minister were able to talk to Canadians from coast to coast using telephone and telegraph facilities and the trans-Canada radio network. Carrier equipment, which enables more than one conversation to be carried on the same pair of telephone lines, was first used in Canada in 1928. In 1932 the first totally Canadian transcontinental telephone network was opened and the first direct radio telephone link with England was inaugurated.

Although continued refinements were made to this national and international network, the next dramatic changes did not occur until the 1950s. In that decade the first trans-Canada microwave system was built and installed to carry telephone conversations and television programs from coast to coast. Also, the first submarine telephone cable was laid across the Atlantic Ocean, replacing the radiotelephone circuit that had been in use for 25 years.

Thus, by 1960, by keeping pace with technological developments throughout the world and particularly in the United States, Canada had a highly automated national telephone network, fully integrated into the over-all North American network and with excellent connections to other, more distant countries.

### The Telecommunications Team

The national telephone network was not the result of technological development alone but the creation of many men working together in organizations that evolved and adapted themselves to meet changing conditions.

When the telephone industry was first established in Canada in 1877, representatives or agents of many companies were located in towns and cities across the country, sometimes in direct competition with each other in the same city. Then in 1880, as mentioned earlier, The Bell Telephone Company of Canada was organized to consolidate nearly all the telephone business then developing. At first the Bell planned to serve the whole of Canada but problems created by geography and the scattered nature of settlement influenced it to limit operations to Ontario and Quebec. Separate companies developed in British Columbia and the Maritimes and responsibility for providing telephone service in the Prairie Provinces was undertaken by the respective provincial governments. Today there are 2,330 telephone operating companies which differ widely in size and in scope of operations. They range from tiny rural co-operatives serving perhaps a few families to large shareholder-owned and province-owned systems which number their customers in hundreds of thousands. This blend of large and small, private and government ownership is probably unique in the world.

Although there are many companies providing telephone service, each has a monopoly within its own territory. Direct competition was found to be inefficient and had ceased in Canada by 1890 and the operating companies are subject to government regulation at the appropriate level—federal, provincial or municipal.

With so many independent administrations, the need for a new organization to promote co-operation within the industry and the exchange of information about technical and operating procedures became apparent. In 1921 the Telephone Association of Canada (TAC) was formed, its members being the 12 major telephone companies in Canada; this association also works closely with the smaller independent systems. As the barriers of distance were successively overcome, an even more closely knit organization was required to develop and maintain a coast-to-coast long-distance network that would connect to the facilities of the local telephone systems across the country. In 1931, the Trans-Canada Telephone System was established, its members being:—

- The Avalon Telephone Company Limited
- Maritime Telegraph & Telephone Company Limited
- The New Brunswick Telephone Company Limited
- The Bell Telephone Company of Canada
- Manitoba Telephone System
- Saskatchewan Government Telephones
- Alberta Government Telephones
- British Columbia Telephone Company.

In 1949, the Trans-Canada Telephone System acquired a new member, the Canadian Overseas Telecommunication Corporation (COTC), a Crown Corporation established to assume control and operation of all *overseas* communications involving Canada. The COTC operates the Canadian terminals of overseas circuits and is a partner with appropriate foreign administrations in the construction and operation of the necessary transmission facilities such as trans-oceanic cables (see pp. 873-874).

The need for co-operation between operating agencies extends from the national to the international sphere. Following the setting up of the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906, the International Telegraph Union was formed because, in its own words, "telecommunications could span vast distances, but not national boundaries". That Union grew into the International Telecommunication Union (ITU), with headquarters in Geneva, and is the recognized special agency of the United Nations in all matters related to telecommunications.

The Canadian telecommunications industry participates actively in the affairs of the ITU, which include the planned development of international circuits, the study of related technical and operating problems and also assistance to developing countries (see also p. 174). The Telephone Association of Canada and the telecommunications departments of the railways have membership as operating companies. Most of the Canadian manufacturers of telecommunications equipment, in whose laboratories originate the new devices and technology, have joined the ITU as scientific members. This massive contribution from Canadian industry is co-ordinated by the Department of Transport, which is the senior government regulatory body for telecommunications in Canada and is naturally the official voice of Canada in the ratification of international commitments.

In commenting on the people and organizations involved in telecommunications it should be mentioned that the industry, in operating and manufacturing, employs more than 100,000 people and directly supports over 400,000 people, which is about 2 p.c. of the total population of Canada.

### Recent Developments

It is apparent that the rate of telecommunications development has been accelerating, particularly over the past 15 years, and the contributing factors are undoubtedly the increase in population coupled with rising standards of living, the need to communicate leading to the information explosion, and advances in the art of telecommunications itself.

It is interesting to note that many recent technological advances, such as communication via satellites and Pulse Code Modulation, were predicted and reasonably well understood more than 20 years ago but the necessary components were lacking. This situation changed when a completely new generation of components was introduced in the 1950s, stemming from the invention of the transistor at the Bell Laboratories in 1948. At first, transistors were produced as individual components and were smaller, cheaper, more reliable and dissipated less heat than the electron tubes they replaced. But further developments came rapidly as manufacturers around the world saw the many advantages of the new devices. The single transistor gave way to integrated and thin film circuits produced by micro-photography. From a wafer-thin slice of silicon the size of a 25-cent piece, about 600 Monolithic Integrated Circuits can be made, each containing perhaps a hundred components. Theoretically, 9,000 of these components, enough to make a modest computer, could be contained in a thimble. However, the mechanical problems of mounting and connecting the components and allowing for heat dissipation mean that the optimum packing density is beyond reach at the moment. Another point to note is that, contrary to previous experience, integrated circuits have proved to be cheaper and are more reliable than the equivalent individual components.

The economy, reliability and small size of the new solid state devices—and their fast operating times when used in switching applications—have made possible the changes we see around us, from small transistor radios, computers and satellite communications to the less obvious changes in the telecommunications network. Electronic switching systems have now been developed that will eventually supersede Crossbar systems. This new equipment uses the common control technique that was pioneered with Crossbar but the electronic control circuitry is many times faster than the relay type circuits currently in use. Somewhat paradoxically, the increased speed of electronic switching will not directly reduce the time a subscriber needs to reach the party with whom he wishes to talk because, already, calls are connected almost as soon as the originator has finished dialing. But the faster electronic equipment can refer to more information when setting up a call and the memory circuits that store this information will use programmed logic which is easier to change than the wired logic of existing common control systems. It is anticipated that this combination of speed and of a larger, more flexible memory will result in a more personalized form of telephone service. For example, subscribers may be able to reach people they call frequently by dialing only two or three digits instead of seven, or they may be able to arrange for incoming calls to be routed temporarily to another location. These and many more services can be provided in this new age but it is not certain what form these services will take, because no one knows which of the services telephone users will want and be prepared to pay for.

Another benefit to be derived from the increased intelligence of electronic systems and the greater reliability of its solid state components will be an increased ability to take care of its own operation. Already, common control switching systems can isolate and report defective units. A limited amount of extra equipment is supplied so that Crossbar systems can continue to operate unattended for months between visits by a maintenance crew. This trend will be carried further and electronic switching offices will be self-checking and self-repairing to a degree that leads switching engineers to talk of an “immortal machine”.

Recent developments in the field of transmission have been equally significant and exciting. Some, such as over-the-horizon radio and satellite communication, have caught the imagination of people everywhere. But they have also shown that radio waves are becoming very congested and that the conservation and efficient use of the available frequency spectrum is a matter demanding international regulation of the highest order. Because of the tremendous demands for frequency bandwidths resulting from the “communications explosion”, two recent innovations may prove to be crucial to the development of telecommunications over the remainder of this century. The first is the reversion to cable. Recent research has led to the evolution of high capacity, high quality, long-haul transmission over co-axial cable that is economical and fully competitive with microwave equipment. The second is more properly an invention—the discovery of the “Laser”. This makes available tremendous bandwidths at the lower end of the light spectrum, i.e., at frequencies far above those used for telecommunications today. In so far as bandwidth is the natural resource used for telecommunication transmission, the invention of the Laser has been compared in significance with the addition of nuclear power to the world's available sources of prime power.

Mention should also be made of a new transmission multiplexing technique, Pulse Code Modulation (PCM), by which a voice circuit is sampled at regular and frequent intervals. Each sample of the signal is then coded in a digital manner similar to a telegraph signal. The coded samples from many voice circuits are then interleaved and transmitted over a single pair of conductors to a distant point, where they are sorted, decoded and the original signals reconstituted. PCM is interesting for many reasons. First, the principles were discovered and disclosed 30 years ago but the practical application was dependent on the developments of solid state devices over the past ten years. Second, it is the first time that digital or telegraphic rather than analog techniques have been used for the transmission of speech. This has the advantage that on long circuits, amplifiers can be used which differentiate between the desired signal and undesired noise and which

The introduction of the Electronic Switching System is the most important technological advance in telephony in Canada since the early 1920s—it not only offers a great variety of new telephone services today but is capable of providing future services not yet dreamed of.

→ technician checks the central control section of the Montreal ESS, which co-ordinates and commands all system operations.

→ A pencil points out the size of these minute circuits.

Miniaturization is of great importance in the design of the System, the space requirement for which is about one fifth that of the replaced system.

← High-power magnification equipment is used to test microcircuits prior to mounting on a 'header'  $\frac{3}{8}$ " in diameter.

will amplify the former and reject the latter. Third, PCM introduces the principle of Time Division Multiplexing as an alternative to Frequency Division Multiplexing. Fourth, and perhaps most important, the rapid sampling of different voice circuits with PCM is really a form of electronic switching. Switching and transmission have now become integrated rather than closely related disciplines.

### Telecommunications in Transition

The previous paragraphs have covered various aspects of the changing role of telecommunications in Canada and elsewhere in the world and indicated that developments are now coming at a prodigious rate. The industry has entered the most dramatic period of transition of its existence, both in its impact on the lives of all of us and in its own composition. It is no longer possible to think of telecommunications merely in terms of telegrams and telephone calls when the existing networks are already carrying data, drawings and television. Telecommunications today must be defined as "the electrical transmission of intelligence" and its potential impact is still a matter of speculation, although recent applications may give some clues.

In our homes and at work we are aware of a more flexible, personalized and capable telephone service and this trend will certainly continue as new developments become available. The transmission of data and pictures is already revolutionizing many aspects of business including inventory control, the scheduling and loading of transportation facilities and discussions between suppliers and customers of technical specifications. Some firms have used private voice-video facilities to conduct personnel interviews where long distances separated the participants. But it may well be that the new telecommunications will have its greatest impact in the field of education. Regular television programs have included educational material for many years and the soundness of the techniques has been demonstrated in many countries. More recently, lectures without pictures were conducted over regular telephone lines and it was found that lecturers and students adapted rapidly to the changed environment. For many subjects the "tele-lecture" has proved to be more effective than one-way television because the student can participate over the telephone circuit. An ambitious Canadian venture in this field is being conducted jointly by the University of Saskatchewan and Saskatchewan Government Telephones. An instructor in Regina lectures in mathematics to classes in several other cities. His notes and sketches are also transmitted via a Visual Electronic Remote Blackboard (VERB) and projected onto screens in the classrooms.

The impact of telecommunications on education will also affect adults. Many jobs are disappearing and people have to be re-trained for completely new work. Other jobs have been altered by technological advances so that the educational requirements to perform the jobs satisfactorily have also changed. This applies not only to professional employment but also to the so-called "unskilled" workers. Although all levels of government are becoming increasingly involved in this type of re-training and education, much of the responsibility for it falls on industry.

Today there is more need for education of all kinds but at the same time there is a shortage of teachers. Telecommunications is one possible solution that has attracted the attention of many companies and individual teachers, scientists and engineers. The man-machine interface is being studied. Even the learning process itself has been re-examined and this has led to programmed learning and teaching machines.

Society's present methods of storing information for reference purposes in libraries, in correspondence files and in technical drawings are also being challenged. What can be stored on paper can also be stored electronically, regardless of whether the information consists of business records or is of a purely educational nature. The combination of modern computers and telecommunications make the storage, retrieval and processing of information at large centralized information centres easy and convenient. Computer time

sharing means that a small business can avail itself of these facilities just as readily as a large business. For example, it is quite conceivable that a dentist in Moose Jaw might use a computer in Regina to maintain his records and send out his bills. Electronic reference libraries will not only provide information, they will also ascertain the inquirer's current level of knowledge and then select the additional information he needs. In other words, the equivalent of the capable assistance of a professional librarian in a large library could be available to a person in a small remote community.

Although it is not possible here to more than suggest some of the effects of the new technology, there is a growing belief that the advances in communications are changing basic living patterns. Professor McLuhan, Director of the University of Toronto's Centre for Culture and Technology, has already attained an international reputation for his analysis and observations on these basic changes. We are all aware that, through television and telecommunications, we are more up to date on events in distant parts of the world, that we are members of a wider community which McLuhan calls living in an "Electronic Village". His epigram that "the medium is the message" is intended to focus attention on the media used for the origination, transmission and display of information in which telecommunications plays an important part.

This closer relationship between the new telecommunications and other technologies and disciplines is most significant. The boundaries between telecommunications and computers and information handling, etc., will become less clearly defined and new companies will challenge the established telecommunication manufacturing and operating companies. The rate of technological advance should further increase as developments in one area of communications stimulate developments elsewhere and the main problem may well be to remain the masters of what we can create.

### Subsection 1.—Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Parliament are subject to the jurisdiction of the Board of Transport Commissioners in the matter of rates and practices under the provisions of the Railway Act (see pp. 786-787); other companies are responsible to provincial regulatory bodies. International telegraph and telephone communications are handled subject to the International Telecommunication Convention and the Regulations thereunder and/or under regional agreements. Tolls charged to the public for radio communication service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Radio communications in Canada, except for those matters covered by the Broadcasting Act, are regulated under the Radio Act and Regulations and also under the Canada Shipping Act and Ship Station Radio Regulations. In addition, radio communication matters are administered in accordance with the International Telecommunication Convention and Radio Regulations annexed thereto; the International Civil Aviation Convention; the International Convention for the Safety of Life at Sea; the Inter-American Telecommunication Convention and the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and also in accordance with such regional agreements as the Agreement between Canada and the United States for the Promotion of Safety on the Great Lakes by Means of Radio, the Agreement between Canada and the United States relating to the Co-ordination and Use of Radio Frequencies Above Thirty Megacycles per Second, the Inter-American Radio Agreement, the North American Regional Broadcasting Agreement, the Canada-USA Television Agreement and the Canada-USA FM Agreement (see also p. 876).

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of a national broadcasting system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors regulates the establishment and operation of networks of radio and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. Although the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Minister. (See also pp. 881-882.)

During 1966 the Government published a White Paper on Broadcasting proposing amending legislation whereby the Board of Broadcast Governors would have full power to issue broadcasting licences, subject only to technical evaluation and certification by the Department of Transport. The proposed new legislation would also provide that community-antenna television systems be treated as components of the national broadcasting system, subject to licensing, regulation and control by the Board of Broadcast Governors.

### Subsection 2.—Telephone and Telegraph Statistics

**Telephone Statistics.**—In 1965 there were 2,374 telephone systems operating in Canada compared with 2,458 in 1964; of these systems 2,330 reported in 1965 and 2,421 in 1964. Co-operative systems in rural districts decreased from 2,144 in 1964 to 2,072 in 1965 and incorporated companies from 174 to 157. The largest of the incorporated companies, The Bell Telephone Company of Canada, which operates throughout the greater part of Ontario and Quebec and in Newfoundland and the Northwest Territories, served 61 p.c. of all the telephones in Canada in both 1964 and 1965 and the British Columbia Telephone Company, also shareholder-owned, served 9.5 p.c. of the total in 1965. The number of telephones in use increased by 65.4 p.c. during the 1956-65 period.

#### 1.—Pole-Line and Wire Mileage and Number of Telephones in Use, 1956-65

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Systems	Route Mileage	Length of Wire	Telephones in Use			
				Business	Residential	Total	Per 100 Population
	No.	miles	miles	No.	No.	No.	No.
1956.....	2,661	269,303	16,410,897	1,334,403	3,164,922	4,499,325	28.0
1957.....	2,637	274,334	18,161,444	1,409,446	3,417,689	4,827,135	29.1
1958.....	2,619	280,884	20,250,410	1,486,393	3,631,900	5,118,293	30.0
1959.....	2,605	267,737	22,791,129	1,568,735	3,870,288	5,439,023	31.2
1960.....	2,558	274,855	25,333,802	1,673,915	4,054,252	5,728,167	32.2
1961.....	2,509	303,167	26,986,478	1,723,599	4,284,416	6,014,015	32.6
1962.....	2,430	314,523	28,930,413	1,816,895	4,512,553	6,329,448	33.7
1963.....	2,296	284,202 <sup>1</sup>	31,267,977	1,910,178	4,746,435	6,656,613	34.9
1964.....	2,421	281,036 <sup>1</sup>	33,731,622	2,016,182	5,003,192	7,019,374	36.1
1965.....	2,330	283,478 <sup>1</sup>	36,666,557	2,142,256	5,302,815	7,445,071	38.1

<sup>1</sup> Excludes channel mileages sometimes included in previous years; also, in 1963-65 data were collected for underground cable rather than for underground conduit as previously.

## 2.—Telephones in Use, by Province, 1965

Province or Territory	On Individual Lines		On 2- and 4-Party Lines		On Rural Lines		Public Pay Telephones
	Business	Residential	Business	Residential	Business	Residential

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems.

## 3.—Local and Long-Distance Calls and Average Calls per Capita and per Telephone, 1956-65

NOTE.—Figures from 1928 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita	Average Calls per Telephone		
					Local	Long-Distance	Total
	'000	'000	'000	No.	No.	No.	No.

**Telegraph Statistics.**—There were nine telegraph and cable companies operating in Canada during 1965 but, as already stated, telegraph service is provided mainly by the telecommunications departments of the two major railway companies (see also p. 861). The number of telegrams sent continues to decline year by year, giving way to other types of message transmission, but the number of cablegrams sent has been rising. The business of telegraph and cable companies appears to be changing from one of handling messages directly to one of leasing equipment for the transmission of messages by others. Revenues from the latter source have been rising over the past several years and have been the main factor in the steady advance in total operating revenues. Total cost of property and equipment for all telegraph and cable companies was \$447,295,000 in 1965, increasing from \$425,324,144 in 1964.

**6.—Summary Statistics of Canadian Telegraphs, 1956-65**

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Operating Revenues	Operating Expenses	Net Operating Revenue	Pole-Line Mileage	Wire Mileage	Employees <sup>1</sup>	Telegrams	Cable-grams <sup>2</sup>	Money Transfers

<sup>1</sup> Excludes commission operators.

<sup>2</sup> Includes wireless messages and transatlantic telex messages.

**Subsection 3.—Overseas Telecommunications Services**

The Canadian Overseas Telecommunication Corporation (COTC) was established in 1950 to maintain and operate external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and overseas points; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other parts of the Commonwealth. By 1966 the following services had been established: direct telegraph, telephone and telex communications between Canada and Argentina, Australia, Barbados, Bermuda, Brazil, Britain, Denmark, Finland, France, Germany, Iceland, Italy, Jamaica, Japan, the Netherlands, New Zealand, Norway, Sweden and Switzerland. Direct telegraph and telex services are operated with Belgium and Peru and direct telegraph service is operated with the U.S.S.R.

The first transatlantic telephone cable, a joint project with the British Post Office, the American Telephone and Telegraph Company, the Eastern Telephone and Telegraph Company and the Corporation, was brought into service in 1956. Apart from normal use of its systems for public telephone and telegraph message traffic, capacity is available for private leased circuits. International telex service was introduced to Canada the same year and service with 118 countries is available. Since 1961 the following cables have been made available for service: the Canada-Britain 80-circuit telephone cable (CANTAT); the Canada-Greenland-Iceland 24-circuit cable (ICECAN), primarily intended to meet the North Atlantic communication needs of international civil aviation, and its connecting counterpart between Iceland and Scotland (SCOTICE); a four-party project (Canada-Britain-Australia-New Zealand), part of a Commonwealth round-the-world cable system, consisting of a Canada-New Zealand-Australia 80-circuit telephone cable (COMPAC); and the use of a number of circuits for Canadian purposes in a telephone cable system connecting Jamaica and the United States and in a telephone cable system connecting Bermuda and the United States. Additional circuits are being taken up in the latter system for

extension to Tortola and thence by tropospheric scatter systems to various islands in the eastern Caribbean and these will be operational toward the end of 1966. A six-party (Canada-Britain-Australia-New Zealand-Singapore-Federation of Malaysia) project, a section of the Commonwealth round-the-world cable system, will provide, when completed early in 1967, an Australia-New Guinea-North Borneo-Singapore-Malaysia-Hong Kong 80-circuit telephone cable (SEACOM) and will connect with COMPAC.

COTC, under a long-term agreement, has chartered the CCGS *John Cabot*, a combined ice-breaker/cable repair ship, provided for these purposes by the Department of Transport. The ship is to be mainly responsible for the maintenance of all the cables in the western North Atlantic Ocean.

Canada, along with 50 other countries, is a member of the International Telecommunications Satellite Consortium (INTELSAT). This organization is responsible for financing, setting up and operating a global satellite communication system. The COTC is Canada's designated operating entity for this purpose and is represented on the 18-member Interim Communications Satellite Committee (ICSC) which is responsible, on behalf of INTELSAT, for carrying this venture forward. A communications satellite ground station is being constructed near Liverpool, N.S., by the Department of Transport for experimental purposes. It is designed to improve the capability of industry and government in this new field and will be made available to the COTC for its initial direct participation in the commercial satellite system. Exploitation of this new technology, along with continued use of existing submarine cables and other facilities, will make possible an improved global network to meet the ever-increasing demand for overseas communication services, including television relay. A list of the cables landed in Canada is given in Table 7.

7.—External Cables Landed in Canada, 1966

Company and Station	Cables	Nautical Miles
	No.	No.
<b>Canadian Overseas Telecommunication Corporation (COTC)—</b>

<sup>1</sup> Twin cable from Clarenville, Nfld. to Oban, Scotland, and single cable from Clarenville, Nfld. via Terrenceville, Nfld. to Sydney Mines, N.S.; licensed for operation by two carriers—COTC and ET&T.

Increased demand for all types of overseas telecommunication services resulted in the COTC reporting a net profit of over \$2,500,000 for the year ended Mar. 31, 1966. Income for the year amounted to \$17,967,279.

The satellite tracking station at Mill Village on Nova Scotia's south shore is Canada's first link with the global satellite communications network now being established. The rubberized dacron radome protects the giant parabolic reflector antenna which is capable of rotation to any position required to keep orbital satellites within range at all times.

#### **Subsection 4.—Federal Government Civil Telecommunications and Electronics Services**

Radio regulation and radio aids to navigation services are under the jurisdiction of the Telecommunications and Electronics Branch of the Department of Transport. The functions and responsibilities of the Branch may be summarized as follows: (1) administration of the Radio Act and Regulations and the Radio Provisions of the Canada Shipping Act and Ship Station Radio Regulations; (2) research into and development of new and improved communication and electronic equipment and systems needed for aeronautical, marine, meteorological and other services; (3) construction, maintenance and operation of radio aids to marine and air navigation and of radio communication stations including procurement of the necessary equipment; (4) development of policy and plans with respect to international telecommunications by cables, satellites and other media including relations with the Canadian Overseas Telecommunication Corporation; (5) co-ordination of policy governing government use of telecommunication services; (6) administration of the leasing of land-line facilities required for all services of the Department; (7) planning of emergency measures and administration of the Emergency National Telecommunication Organization (ENTO); (8) administration of the Telegraphs Act and the Regulations thereunder covering the licensing of overseas submarine cables; (9) participation in the work of the International Telecommunication Union and its subsidiary organs; and (10) participation in the communication and electronic activities of the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the International Marine Consultative Committee (IMCO).

**Licensing and Regulation of Radio Stations.**—Under the Radio Act and the Canada Shipping Act it is provided that radio stations employing a form of Hertzian wave transmission, including television and radar, be licensed by the Department of Transport, unless otherwise exempted by regulation. Licensing, which provides basic control over the right to establish a radio station, involves the assigning of specific frequencies to each station. Frequencies are assigned to many types of services on a shared non-interference basis. Engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and, before a new broadcasting station can be licensed or before modifications can be made to an existing station, notification is sent to the signatory countries of the North American Regional Broadcasting Agreement, in the case of AM broadcasting stations, and to the United States under the Canada-USA Television Agreement and the Canada-USA FM Agreement, for television and FM broadcasting stations, respectively. The setting of standards for the equipment, installation and operation of a station provides control for efficient use of the radio spectrum. A further control is the requirement that operating personnel be subject to examination and certification.

From time to time the Department of Transport establishes standards governing the technical suitability of radio equipment for licensing in Canada and Radio Standards Specifications and Procedures are issued by the Telecommunications and Electronics Branch in co-ordination with representatives of industry. Before a licence may be issued the radio equipment must comply with the technical requirements of the applicable Radio Standards Specification and be type-approved or declared technically acceptable. Type-approval and technical acceptability briefs may be prepared and submitted by a communications consulting engineer or the necessary tests may be conducted, for a fee, at the Department of Transport Radio Regulations Engineering Laboratory, Ottawa. Over 1,400 units were type-approved or declared technically acceptable during the year ended Mar. 31, 1966.

Eight fixed and one mobile monitoring stations are maintained at suitable points across Canada to observe actual radio spectrum conditions using a variety of modern electronic aids, their purpose being to ensure that radio communications are conducted according to regulatory procedures and to determine causes of harmful interference.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that meets the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. All Canadian and foreign ships are subject to inspection to ensure that they conform to the requirements of the Safety of Life at Sea Convention.

Standards have been developed for the installation of aircraft radio stations specifying the techniques and materials that may be used, and inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile radio stations and the regulations made under the Radio Act provide for the examination and certification of operators, both professional and amateur.

*Number of Radio Stations Licensed in Canada.*—The number of licences in force for radio stations in Canada during the year ended Mar. 31, 1966 was 162,840 compared with 136,912 in 1964-65. These figures include stations operated by departments of federal,

provincial and municipal governments, stations on ships and aircraft registered in Canada and mobile stations operating in public and private land mobile services, but do not include private commercial broadcasting licences.

<i>Item</i>	<i>Year Ended—</i>	
	<i>Mar. 31, 1965</i>	<i>Mar. 31, 1966</i>
	<i>No.</i>	<i>No.</i>
New applications received.....	21,141	23,926
Authorizations granted.....	20,930	23,703
Licences cancelled.....	7,195	8,957
Licences renewed.....	89,507	102,586
Amateur licences in force.....	11,293	11,693
General radio service licences in force (issued) <sup>1</sup> .....	36,112	41,534
General radio service licences issued during year (new or renewed)	11,714	19,001
Total licences in force.....	136,912	162,840
Licence amendments.....	15,575	14,487
Certificates of Registration issued to U.S. licensees.....	1,202	2,322
Net increase of licences in force over preceding year.....	18,558	25,928

<sup>1</sup> General radio service licences are valid for a three-year period.

**Investigation and Suppression of Inductive Interference.**—The Radio Act provides penalties for selling or using apparatus liable to cause interference to radio reception. Standards are developed and type approvals issued for certain classes of such equipment. The Telecommunications and Electronics Branch of the Department of Transport also provides a country-wide interference service using special investigation equipment for the purpose of tracing sources of interference and recommending cures for interference to broadcast, television and other radio reception. Seventy-five cars equipped for measuring and locating sources of interference operate from offices located in 30 cities throughout Canada; 17,598 cases were dealt with during the year ended Mar. 31, 1966.

Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order and Radio Noise Limits Order Amended. This amendment, introduced on Sept. 24, 1964, designated the limits for noise from television receivers manufactured in Canada or imported into Canada on or after Apr. 1, 1966. Certain low-powered radio transmitting and receiving equipment is exempt from the operation of the Radio Act, e.g., garage door radio controls for a number of models have been exempted and consequently may be operated without the radio station licence otherwise required.

**Meteorological Communications.**—Weather stations operated by the Meteorological Branch of the federal Department of Transport throughout Canada are linked coast-to-coast by means of teletype and, in the remote northern areas, by radio or radio-teletype. The land-line teletype circuits are leased from commercial companies and the radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial telegraph or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-to-coast teletype systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax, Gander and Goose Bay. These centres handle the distribution of weather information within Canada, including the Arctic, and also effect international exchange with the United States and Europe and, through them, with many other countries. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses 59,700 miles of teletype circuits, connecting 392 teletype offices.

In addition, a facsimile network connects weather offices and includes radio facsimile transmission to Arctic stations and ships at sea. Weather charts originating at the Central Analysis Office and the High Level Forecast Office in Montreal receive national distribution over the network. Charts prepared at the various Weather Central Offices across Canada are transmitted regionally. Altogether, the Meteorological Branch utilizes 13,700 miles of facsimile circuits, serving 86 offices.

**Radio Aids to Marine and Aeronautical Navigation.**—Services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are outlined in the following paragraphs; details may be obtained on request from the Department of Transport, Ottawa.

*Marine Navigation.*—Radio aids to marine navigation are provided for radio-equipped Canadian vessels and foreign ships using Canadian waters. This safety and communications service for shipping covers the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait and includes regularly broadcast weather reports, storm warnings and notices of dangers to navigation. Ships at sea may obtain medical advice from any coast station. The stations carry out communications by radiotelegraph and /or radiotelephone and most of them provide connections to land telephone lines. Halifax (VCS) and Vancouver (VAI) stations provide a long-range radiotelephone service to ships. Halifax (VCS) and Vancouver (CKN) have radiotelegraph facilities for world-wide communications and participate in the Commonwealth long-range ship communications scheme. Coast stations on Hudson Bay and Hudson Strait, in addition to their regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions, etc.

Automatic radiobeacon stations are maintained on the East and West Coasts, the St. Lawrence River and Gulf, the Great Lakes and Hudson Bay and Strait, giving navigational aid to mariners by transmitting signals on which bearings may be taken. These stations are arranged, where possible, in groups up to a maximum of six stations transmitting in sequence on a common frequency, the sequence being repeated continually regardless of weather conditions.

*Loran* is a long-range radio aid to marine and air navigation providing accurate fixes at distances up to 750 miles by day and 1,500 miles by night. Two Loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans. *Decca* is a short-range radio aid to navigation providing accurate fixes at distances up to 250 miles. Four chains of Decca stations are in operation—the Newfoundland chain, the Nova Scotia chain, the Anticosti chain and the Cabot Strait chain—giving service to ships off Newfoundland and Nova Scotia and in the St. Lawrence River and Gulf.

It has become general practice to equip merchant ships with radar and important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour. Low-powered transceivers are provided for use in emergencies at lighthouses, particularly at locations that would otherwise be completely cut off from assistance in case of illness.

*Aeronautical Navigation.\**—Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways, and are used by Canadian and foreign air carriers flying over Canadian territory. Six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto,

\* See also the item on Air Traffic Control, pp. 850-851.

Ont., Montreal, Que., and Moncton, N.B., carry out the construction and operation of facilities. Low-frequency radio range stations, located approximately every hundred miles along airways, provide specific track guidance to pilots by means of audible signals which may also be used to obtain direction finding bearings. In addition, radiotelephone communications are available between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights. Forty-eight very high frequency omni-directional ranges (VOR) are in operation, a type of facility that enables the pilot to select any desired course. These omni-directional ranges have permitted the establishment of VOR airways across Canada and on a number of trans-border routes in co-operation with the United States. Additional installations are under construction.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. Fan markers operating on very high frequencies are usually placed on an airway to inform the pilot when he may safely lose altitude or to indicate accurately the distance from an airport. Station location markers, similar to fan markers, are installed at most radio range sites; they enable a pilot to determine when he is exactly over the station.

Airport and airway surveillance radars (150 nautical-mile) are in operation at 16 airports for air traffic control purposes. Precision approach radars are in operation at seven major airports. Instrument landing systems (ILS) provide radio signals which permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. Forty-five instrument landing systems are in operation.

Aeronautical radio communications stations are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with domestic and international air carriers. Thirteen international communications stations, giving coverage from coast to coast and over the oceans, form a major contribution on the part of Canada to international aviation.

### **Subsection 5.—Public and Private Commercial Microwave Facilities**

Canada, because of its population distribution and the vast areas served by microwave communication links, ranks second highest among the world's users of microwave communications systems on a per capita/per mile basis. Increasing demand for television outlets necessitated the extension of microwave routes to provide interconnections for the CBC English, French and private networks and recently these routes have been upgraded to enable the transmission of colour television which started in the autumn of 1966. With the use of more automated equipment by industry and various services, associated data and control information must be transmitted at rapid speeds over microwave radio-relay to widespread areas throughout the country. This Subsection gives a summary of the facilities existing or under construction at the end of March 1966.

**Railways.**—The Telecommunications Departments of the Canadian National and Canadian Pacific Railway Companies have placed in operation a microwave system extending from Montreal to the Pacific Coast, which is used for television, telephone and data relay purposes. They also operate microwave facilities linking the Province of Quebec with the Maritime Provinces and Newfoundland and a major expansion of microwave facilities in Newfoundland has been undertaken by Canadian National Telecommunications (CNT). In addition, CNT has installed a microwave system between Alberta and the Yukon Territory which carries telephone and data traffic and serves both civil and

military organizations in the area. In co-operation with Alberta Government Telephones, a combination microwave and tropospheric scatter system connects Alberta and the Northwest Territories. This system is also intended to provide communication for civil and military use in the Far North. The Quebec North Shore Labrador Railways has developed a microwave system extending into northern Quebec to provide communication for mining operations and to serve some civil communication purposes. Ontario Northland Railways operates a microwave installation connecting northern Ontario and James Bay, also for purposes of military and civil communication. The Pacific and Great Eastern Railway makes extensive use of 6,000 Mc/s microwave facilities linking Vancouver with Prince George and Dawson Creek, B.C.

**Telephones.**—The Trans-Canada Telephone System consists of eight provincial and private systems collectively providing a transcontinental microwave system for the purpose of carrying telephone, television, data and other types of communication services. Extensive microwave systems are utilized within the respective provinces for civil and military communications or television relay purposes. Major expansion has taken place in each province, greatly increasing the number of areas served and system capacity for all types of communication requirements. Tropospheric scatter systems are employed to provide beyond line-of-sight transmissions especially to the Far North areas; these are used for both civil and military applications.

Recently the telephone companies of the three Prairie Provinces announced plans for construction of a major microwave system extending from Winnipeg to Edmonton, to form part of a projected second transcontinental microwave system operated by the telephone companies. The B.C. Telephone Company has installed a major trunk system from Prince Rupert to Prince George which is linked through Prince George with the transcontinental system in the southern part of the province. A microwave system has been built linking Mill Village communication satellite earth station, constructed near Liverpool, N.S. (see p. 875), with the trunk route system of Maritime Telegraph and Telephone Company.

**Television.**—The two main television interests in Canada—the CBC and the CTV Television Network Limited—lease private microwave facilities for the relay of television programs from coast to coast. In addition, studio transmitter links are used by various television stations where the television transmitter is situated some distance from the studio and interconnection is required. In sparsely populated areas, off-the-air pick-up signals from primary television stations are sometimes relayed via microwave to rebroadcasting sites. Microwave facilities are also used in connection with portable and mobile television pick-up where program material is intended for the main studio. Recently, both network facilities and local studio transmitter links have been up-graded to enable the transmission of colour television.

**Industrial.**—Although many firms utilize public communication facilities on a lease basis, some organizations have installed private microwave systems to provide voice, teletype and control data for various purposes. The British Columbia Hydro and Power Authority, the Calgary Power Corporation, The Hydro-Electric Power Commission of Ontario, the Quebec Hydro-Electric Commission and Manitoba Hydro use a considerable number of microwave relay systems for important control and communication purposes. For example, Hydro-Quebec has recently greatly expanded its hydro power-generating capacity and new microwave routes have been added to permit a central control of the various generating stations. The British Columbia Hydro and Power Authority is installing facilities to link the Vancouver area with Peace River, Mica Creek and the Bonneville Power Administration, and also for system control in the Vancouver area.

### Subsection 6.—Miscellaneous Radio Communication Services

In addition to radio communication services provided by the Federal Government, extensive radio communication systems have been established in the provinces, mainly for police, highway and forestry protection purposes. Municipal government departments have steadily increased their use of radio to facilitate operations, particularly as a medium of communication with vehicles—police, fire, engineering, hydro, etc. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical also make extensive use of radio for communication purposes.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both mobile and point-to-point radio fields.

The telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Restricted common-carrier mobile radio service (this service to vehicles does not permit interconnection with the over-all telephone system but only with specific dispatchers) is available in most major cities in Canada as well as in a number of smaller urban centres. The latter service is provided by telephone companies as well as by other organizations. Low-power radio stations may be licensed to permit short-distance personal and private business radiotelephone communications; more than 41,000 licences were in force on Mar. 31, 1966.

### Subsection 7.—Radio and Television Broadcasting\*

Broadcasting in Canada has developed over a period of some forty-seven years as a combination of public and private enterprise. Since the opening program from the first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 98 p.c. and television service over 92 p.c. of the Canadian population.

To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two 'official' languages forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests, had to be served. Physical problems of distance and geography had to be overcome. It requires some 360 radio transmitters and 221 TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of 15,000 miles of land-lines for radio networks and 8,500 miles of microwave circuits for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

Since 1932, a publicly owned body, now known as the Canadian Broadcasting Corporation, created to develop a national service, has worked with the private or independent station-owner to establish this service. A more recent addition (1958) is the Board of Broadcast Governors, which consists of three full-time members including the chairman and vice-chairman and 12 part-time members; the function of the Board is to "regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto". (See

\* Textual information in this Subsection was revised by the Canadian Broadcasting Corporation, the Board of Broadcast Governors and the Canadian Association of Broadcasters; statistical data were prepared by the Transportation Division of the Dominion Bureau of Statistics.

also pp. 869-870.) The Canadian Broadcasting Corporation consists of a president and a vice-president and nine other directors appointed by the Governor in Council. It is accountable to Parliament through a Cabinet Minister designated by the Governor in Council and is empowered to establish and maintain program networks and stations. (See also pp. 882-886.)

The Broadcasting Act also requires that, before dealing with any application for a licence to establish a broadcasting station (private or public) or for an increase in power, change of frequency or change of location of a broadcasting station, the Minister of Transport must receive a recommendation from the Board of Broadcast Governors. The same requirement exists with respect to the making of a new regulation or changes in the Regulations under the Radio Act which affect broadcasting stations. Before making an appropriate recommendation to the Minister of Transport, the Board considers all such applications at a public hearing at which the applicant, licensees and the Canadian Broadcasting Corporation are given the opportunity of being heard.

Under the provisions of the General Radio Regulations, Part II, made under the Radio Act, the Minister of Transport must also receive a recommendation from the Board before dealing with any application to change the ownership or control of any share of capital stock in the licensee of a broadcasting station which is incorporated as a private company. The Board of Broadcast Governors has established a policy that any such application which would result in a change of ownership or control of a licensee would be referred to a public hearing before a recommendation is made to the Minister. Applications of this kind not involving a change of ownership or control may be dealt with by the Board or the Executive Committee of the Board at a regular meeting.

Under the provisions of the Broadcasting Act, the Board has issued the Radio (AM) Broadcasting Regulations, the Radio (TV) Broadcasting Regulations and the Radio (FM) Broadcasting Regulations.

**Broadcasting Facilities.**—As of Apr. 1, 1966, the CBC had 31 AM broadcasting stations, six FM broadcasting stations, 16 shortwave broadcasting stations, 49 TV broadcasting stations (including satellites) and 141 low-power relay transmitters in operation. On the same date, private companies owned and operated 243 AM broadcasting stations, 59 FM broadcasting stations, six shortwave broadcasting stations and 204 TV broadcasting stations (including satellites). All but 15 of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over networks operated by the CBC. Of the 15 unaffiliated private television stations, 11 form The CTV Television Network Limited which commenced operating in the fall of 1961; the other stations, located in Quebec City, Chicoutimi, Hamilton and Montreal, are independent of network affiliation.

Of particular significance for all broadcasters, public and private alike, is the growth in community antenna television systems. These systems, in which the TV receivers of fee-paying subscribers are linked to a common receiving and re-transmission system, make television available to people who could not otherwise receive it and thus, in effect, extend the coverage of existing television stations. The growth of both these systems can have substantial and as yet largely unmeasured effects on television broadcasting itself.

### Operations of the Canadian Broadcasting Corporation, 1965-66

**Television.**—The extension and improvement of the national television service is of continuing concern to the CBC. As of Mar. 31, 1966, about 60 p.c. of the estimated 15,800,000 Canadians who speak English only or are bilingual receive the complete English-language television service through CBC stations; another 33 p.c. receive partial service from privately owned stations of the CBC English television network. There are an estimated 6,230,000 Canadians who speak French only or are bilingual. Complete television service in the French language is available to 64 p.c. through CBC stations and private affiliates provide partial service to an additional 25 p.c.

Much of the population still to be served is in small, scattered communities; approximately 72 of the 2,000 or more areas are outside the national service coverage. To bring television service to these small communities will be both difficult and costly. The Corporation continuously reviews the possibility of establishing adequate service to them and the priority list changes as circumstances change. The main factor in establishing priorities is the per capita cost, other factors being language and geographic locations, particularly the degree of isolation. The Corporation's long-range plan is to provide, as far as practicable, complete CBC national network programming, both television and radio, to all parts of Canada; the immediate goal is to fill in the gaps not now covered by CBC or affiliated stations.

Because of the rapid expansion of television over the past 13 years, CBC facilities in the large centres are dispersed throughout each. To improve efficiency, the Corporation has planned consolidation of facilities in Montreal and Toronto and studies have been made for consolidation at Vancouver, Halifax, Ottawa and Winnipeg, as funds become available. During 1965-66, a new television affiliate at Churchill, Man., was completed. In addition, two new bilingual television stations owned and operated by the Iron Ore Company of Canada were licensed in Labrador City, Nfld., and Schefferville, Que., on condition that they take only CBC programming. This may well establish a new pattern of public-private partnership in bringing television to more remote communities. The CBC also experimented with a simplified TV station package for use in the more remote areas where it is not economical to extend service by normal means; this package, using a low-power transmitter, programmed by videotape alone and operated by one man, would provide service for four or five hours in the evening. English TV network relay stations and rebroadcasting stations commenced service at Deer Lake, Port Rexton, Marystown and Placentia in Newfoundland and at High Prairie in Alberta. CBC affiliate TV network relay and rebroadcasting stations commenced at Murdochville, Mont Blanc, Grande Vallée, Outardes, l'Ance-a-Valleau and Malartic in Quebec; Haliburton, Bancroft and Hearst in Ontario; Meadow Lake in Saskatchewan; and at Hudson Hope, Bullhead Mountain, Bralorne, Cherryville, Hixon, Quesnel, Nass Camp, Juskatla, Port Alice, Camp Woss and Nimpkish in British Columbia.

The establishment of production facilities and associated transmitters has a twofold purpose—through CBC-owned transmitting facilities, the complete national service is made available to the audience and, through the production facilities, the Corporation is able to tap the program resources of the area and thus eventually reflect the area to the remainder of Canada. This enables the CBC to carry out one of its essential functions—that of showing the parts of Canada to each other or, in other words, of reflecting the country to itself.

**Radio.**—The current demand on CBC radio broadcasting is twofold—first, there is the need to bring service to the small percentage of the population now beyond the reach of Canadian radio and, secondly, the need to increase the amount of national service programming distributed by the national radio networks. As of Mar. 31, 1966, about 98 p.e. of the estimated 15,800,000 Canadians who speak English only or are bilingual receive the English-language radio service through CBC stations and private affiliates. Of the estimated 6,230,000 Canadians who speak French only or are bilingual, complete radio service in the French language is available to 5,880,000 or 94 p.e. At present, some 90 areas with a population of 500 or more do not receive adequate CBC national radio network service. During the year ended Mar. 31, 1966, the national radio service was extended through privately owned affiliated stations to Schefferville and Sept Îles in Quebec, Wawa in Ontario, and Duncan in British Columbia.

In radio, an important service is performed by low-power relay transmitters (LPRTs) in the more remote areas of Canada. These are small, unmanned radio transmitters developed by CBC engineers to relay radio network service to listeners where reception is inadequate or non-existent and installation of a manned station is impractical. They broadcast on the standard AM band to small audiences at a low per capita cost. There were 129 LPRTs in operation in 1965-66 and 11 new ones, connected to the English radio network, extended radio service to new areas during the year; the latter are located at Sable River and Larry's River in Nova Scotia, Sept Îles, Port Cartier, Schefferville and Gagnon in Quebec, Kapuskasing and Vermilion Bay in Ontario, Christina Lake and Squamish in British Columbia, and at Fort Simpson in the Northwest Territories. With the extension of separate French and English radio network feeds to Schefferville, the LPRTs at Labrador City and Wabush which previously broadcast bilingual service were connected full time to the French and English radio networks respectively.

The CBC began FM broadcasting in 1947 with stations in Ottawa, Toronto and Montreal, followed in 1948 with a station in Vancouver and a French-language FM station in Montreal. The CBC now has English-language FM stations in Ottawa, Montreal and Toronto—forming a network—plus Vancouver and Winnipeg, serviced by high fidelity tape and disk exchange. In Montreal, where the CBC has two FM stations, the second offers a local service in French. Application has been made to establish and operate a French-language FM station in Vancouver. The CBC FM service emphasizes music but also includes a wide variety of spoken-word material.

*Northern Service.*—Since 1958, the Northern Service has broadcast by shortwave and medium-wave, in two Eskimo dialects and five Indian languages as well as in French and English, to about 75,000 people scattered over approximately 2,000,000 sq. miles. About 75 p.c. of the population is served by the medium-wave community stations which are located at Whitehorse, Y.T., the program centre for the LPRTs of the Yukon network, and Yellowknife, N.W.T., the program centre for the LPRTs of the Mackenzie network. All the radio stations of the Northern Service are connected with CBC national networks "outside" except those at Inuvik, Churchill and Frobisher Bay which receive national service programs on tape and news by shortwave or medium-wave.

The need for a program service to the Far North in French, English and Eskimo was met by eight and a half hours of shortwave broadcasts daily. News and messages on Arctic Patrol began in the Eastern Arctic for the men on the ice-breakers and supply ships. *Northern Messenger*, CBC's most enduring program, was extended to the full year instead of its former winter season.

The Northern Service is concentrating on improving and extending its programs for Indian, Eskimo and métis listeners who are now beginning to share the economic and educational opportunities available to most Canadians. Radio is an ideal means of communication among people lacking a written culture. The Service has made increasing use of Eskimo and Indian languages in local programming to feature reports, discussions and talks on such topics as housing, health, education and employment as well as community news, messages, traditional folklore and music; for instance, broadcasts in Eskimo at Frobisher Bay increased in the past year from one and a half to twenty hours weekly. The Service also broadcasts the weekly *Indian Magazine* in English, for and about Indian people throughout Canada, co-operating with the National Indian Council, the Indian-Eskimo Association, Indian Friendship Centres in cities across Canada, and federal and provincial government departments dealing with Indian affairs. *Churchill Calling* and *Frobisher Calling* are personal radio message services for Eskimos hospitalized in Southern Canada, for Eskimos attending vocational and academic schools and living in hostels and private residences, and northerners of Indian and métis backgrounds.

In the Mackenzie Delta, the Northern Service co-operated with the Indian-Eskimo Association to start a community development program adapting the format of the *National Farm Radio Forum*. The views of the Delta communities on matters of interest and concern to their members are broadcast in Eskimo, Loucheux and English by radio

station CHAK. These people have little or no means of communicating with each other on matters of common interest or of speaking as a group to other parts of Canada. Radio will help remedy this and if the *Community Action Program* succeeds in the Delta it will be started in other places in the North.

**Armed Forces Services.**—In 1965-66, the Armed Forces Services continued to provide Canadian servicemen and their dependants stationed abroad with shortwave news, live network coverage of outstanding national events, tape-recorded network shows, television films for showing in recreation centres and mess halls, and concert parties of outstanding Canadian variety artists. About 84 hours of programs weekly, recorded from the French and English radio networks, were supplied to the Army and Air Force radio stations in Europe, plus two and a half hours of news, sports and topical programming daily by shortwave. The Armed Forces Services arranged network connections from Canada for Christmas and for the Federal Elections, the Grey Cup and Stanley Cup games. The Service also provides a package of about five hours a week on film and kinescope of CBC-TV programs, including hockey and football games, to the Department of National Defence for distribution to remote northern bases such as that at Alert on Ellesmere Island, just 400 miles from the North Pole.

To mark radio station Canadian Army Europe's 10th Anniversary, the CBC produced special programs for broadcast on its networks and the Armed Forces stations overseas. CBC concert parties toured military bases in Canada, Cyprus and the Middle East, resulting in programs for broadcast by the networks as well as entertainment for the troops.

Royal Canadian Navy ships at sea 'broadcast' CBC radio programs over their public-address systems. These are supplied in tape-recorded form by the Armed Forces Service in quantity to the headquarters of the Navy's Atlantic and Pacific commands. Continuing 'banks' of non-topical programs are maintained at the Halifax and Esquimalt Naval Dockyards. As each ship leaves on cruise it draws a supply of CBC programs from the bank which is constantly replenished with new programs.

**International Service.**—In 1965-66 the International Service broadcast in all languages to Europe, Africa, Latin America, the Caribbean, North America, Australia, New Zealand and the South Pacific. The popularity of shortwave listening was measured by the letters and cards received from all over the world by the 3,000 members of the Radio-Canada shortwave club who exchange technical information and who include an increasing number of members in Eastern Europe, and by the 150,000 listeners around the world who get Program Schedules on a regular mailing list four times a year. This success comes despite outdated equipment at the transmitting plant in Sackville, N.B., which has been in use for 21 years and the limitations of which now force the renting of transmitters in Britain for broadcasts to Eastern Europe and Africa. Spoken-word transcriptions in English, French, Spanish and Portuguese, including some on Canadian history that will be published for the Centennial, were very popular. Transcriptions in other languages were also produced; for instance, stations and networks in Germany, Switzerland and Austria used 376 recorded program items in German.

In television, the 15-minute multi-lingual *Canada Magazine* continued and work started on *Expo Minus One* in colour, showing the influence of Expo 67 on Montreal and its environs. The Canadian Centennial and Expo 67 formed the basis of hundreds of broadcast items. In addition, Expo programs in languages not usually included in the Service covered such ceremonies as sod-turning on the sites of the national pavilions of the countries concerned. Regular broadcast programs frequently dealt with international events taking place in Canada, such as the Conference of the Inter-Parliamentary Union in Ottawa and the International Piano Festival in Montreal.

The transcription service marked the 21st anniversary of the International Service in 1966 with the announcement of a Centennial project produced jointly with RCA Victor. This anthology of music by composers and musicians from all parts of Canada was recorded during the year by the International Service for commercial release.

**International Relations.**—The CBC in 1965-66 continued activity in the field of international exchange and export sales of programs. Export sales, although not a major activity because the CBC's main job is broadcasting, have been very successful as have international exchanges. Variety, music, drama, children's, educational and public affairs programs have been sold in many markets, including Britain, Ireland, the United States, Australia, New Zealand, Hungary, Egypt, Italy, Scandinavia, Germany and Malaysia.

Intertel, of which CBC is a founding member, continued production of hour-long documentaries for a world-wide audience of between 40,000,000 and 50,000,000 viewers. Since the founding of the Federation, the CBC has telecast a total of 28 Intertel documentaries.

CBC personnel seconded from their positions in Canada have continued to assist in the development of television and radio broadcasting service in the newly emerging nations of Asia, Africa and the West Indies. Technical and executive staff have been made available to these countries to assess their requirements and advise on the establishment of broadcast service. Much of this work has been undertaken in co-operation with the External Aid Office of the Canadian Government. Trainees have come from Norway, Greece, Pakistan, France, Indonesia, Japan, Burma, Colombia, Sarawak, Morocco, Malaya, Turkey, the West Indies and many other countries for on-the-job training at CBC production points across Canada in various functions applicable to broadcasting—news service, farm and school broadcasts, press relations, financial operations, administration, technical and programming matters, production, audience research and station management.

At the invitation of the Canadian Corporation for the 1967 World Exhibition, Montreal, the Canadian Broadcasting Corporation is constructing, and will staff and operate, an International Broadcasting Centre at Expo 67. Funds for the Centre come from a special Federal Government allocation. The building will include a large and a small television studio, both equipped for colour, and six radio booths. Construction began in April 1965 and should be completed by Jan. 1, 1967. The International Broadcast Centre will be the agency through which broadcasters' program requirements will be met, their questions answered and their locations around the Expo grounds cleared in advance. Although the Centre is planned, staffed and operated by the Corporation on behalf of Expo 67, the CBC networks will share its use with broadcasters of other countries, such as Australia, Japan, Britain and France.

**Finance.**—The CBC, being a Crown corporation, is financed through public funds authorized by Parliament and through commercial advertising. In the year ended Mar. 31, 1966, commercial revenue accounted for about 26 p.c. of the Corporation's income. It is recognized that such revenue cannot be expected to grow significantly beyond this level, since there are no large untapped sources of advertising revenue available to television and the CBC continues to follow a policy whereby certain programs are not available to sponsorship (including news, talks and public affairs, farm and fisheries broadcasts, school broadcasts, religious and institutional broadcasts) and also deliberately restricts the quantity of commercial messages. The Corporation's efforts to increase commercial revenues are at no time allowed to influence its program decisions.

The following statement of operations shows a 7.4-p.c. increase in expenses in 1965-66 over the previous year to the amount of \$133,446,819. Increases for the previous four years were: 1964-65, 7.1 p.c.; 1963-64, 6.5 p.c.; 1962-63, 0.7 p.c.; and 1961-62, 6.6 p.c. The small increase in 1962-63, as compared with other years, was attributable to the austerity program which caused postponement of planned extensions and improvements to the national broadcasting service. The 1965-66 grant of \$97,044,000 voted by Parliament to discharge the responsibilities of the national broadcasting service was under-expended by \$1,981,000.

### 8.—Financial Statement of CBC Operations, Years Ended Mar. 31, 1965 and 1966

Item	1964-65	1965-66

### Statistics of the Broadcasting Industry

Financial and other statistics of the radio and television broadcasting industry are obtained by the Dominion Bureau of Statistics in co-operation with the Board of Broadcast Governors and the Department of Transport; summary figures for private and CBC sectors are given in Table 9 for 1963-65.

In 1965, 281 private radio stations and 65 television stations reported to DBS. The operating revenue of the broadcasting industry in 1965 amounted to \$171,600,000, an increase of 11.7 p.c. over the previous year. Of the total, radio broadcasting accounted for \$72,800,000 or 42.4 p.c. and television broadcasting for \$98,800,000 or 57.6 p.c.; in 1964, radio received \$67,200,000 or 43.8 p.c. and television \$86,400,000 or 56.2 p.c. Revenue from network and national advertising represented 62.9 p.c. of the total broadcasting revenue and revenue from local advertising 37.1 p.c.; network and national advertising, and

local advertising increased by 10.3 p.c. and 12.9 p.c., respectively, over 1964; other non-broadcasting revenue increased by 21 p.c. Operating expenses in 1965 at \$249,200,000 were 9 p.c. higher than in 1964. The growth of revenues exceeded the growth of expenses and resulted in an operating profit of \$21,500,000 in 1965 compared with \$15,300,000 in 1964. After adjustment on account of other income and expenses and income taxes, the final net profit of the private sector of the broadcasting industry for 1965 was \$13,942,000 compared with \$10,000,000 in 1964. There are no CBC profits or losses in the figure of net profit because any unexpended balance of the parliamentary grant is treated as an account due to the Government of Canada.

<sup>1</sup> The CBC charges its operations with depreciation, but deducts the charge on its published statements; the charge so made has been added to the government grant. <sup>2</sup> Excludes advertising agency commissions, estimated to be \$12,986,238 in 1963, \$14,919,132 in 1964 and \$17,585,786 in 1965.

## Section 2.—Postal Service

The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with speed and security. To carry out these duties, it maintains hundreds of post offices and utilizes air, railway, land and water transportation facilities. In addition, associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting of COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its transcontinental facilities, the Post Office also assists other government departments with such tasks as selling unemployment insurance stamps, collecting government annuity payments, distributing income tax forms and Public Service employment application forms, and displaying government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all the functions of a city office. In larger urban areas, postal stations and sub-offices have full functions similar to the main post office, including general delivery service, lock-box delivery and letter-carrier delivery.

Much sophisticated automatic equipment has been installed in Canada's larger post offices, which could be described as complex semi-automated plants. Such devices include conveyors and chutes, parcel and bag sorting machines, photo-electric counters, intercom systems, observation gallery telephone systems, and industrial music. Outside the post office building are found such innovations as mailmobiles, automatic stamp vending machines, and curbside plastic mail boxes.

The operating service of the Post Office Department is organized into 14 districts, each under a district director. These district directors and the Postmasters, Toronto and Montreal, report directly to the Assistant Deputy Postmaster General, who has the responsibility of conducting the normal field operations of the Postal Service. The operating and support functions required in the provision of postal service to the public are the responsibility of the local postmasters who receive technical and administrative assistance from district offices at strategic points.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada), to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily, intersected by branch and connecting lines radiating to every quarter and linking up with the United States airmail system. All first-class domestic mail up to and including eight ounces in weight is carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air stage service provides the only means of communication for many areas in the hinterland. There are approximately 46,000 miles of airmail and air stage routes. However, the railways are still the principal means of distant mail transport.

At Mar. 31, 1965 there were 11,255 post offices in operation, distributed provincially as follows: Newfoundland 690, Prince Edward Island 106, Nova Scotia 782, New Brunswick 513, Quebec 2,461, Ontario 2,722, Manitoba 800, Saskatchewan 1,166, Alberta 1,042, British Columbia 909, Yukon Territory 20 and Northwest Territories 44. Letter-carrier delivery, performed in 188 urban centres, employed over 9,000 uniformed carriers. Rural mail routes are generally circular in pattern and average about 26 miles in length. Some 1,169 side services transport mail between post offices, railway stations, steamer wharves and airports, and 1,858 stage services convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is expanding and more than 468 such services were in operation in 1965, many of them replacing or reducing con-

veyance by rail. In 1965 there were 1,042 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. Over 50,000,000 miles are travelled annually on about 9,000 land mail services; both land mail and coastal mail services are performed under contract.

Revenue and expenditure of the Post Office Department for the five years ended Mar. 31, 1961-65 are shown in Table 10; gross revenue receipts are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during 1964-65 was \$103,893,949, and receipts from postage meter or postage register impressions and postage paid in cash by other means amounted to \$142,685,105.

#### 10.—Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1961-65

NOTE.—Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Gross Revenue	Net Revenue <sup>1</sup>	Expenditure <sup>2</sup>	Surplus (+) or Deficit (—)
	\$	\$	\$	\$
1961.....	202,003,790	173,645,658	178,371,716	—4,726,058
1962.....	213,517,994	183,678,936	185,019,700	—1,340,764
1963.....	222,358,848	192,830,859	189,344,410	+3,486,449

1965.....	263,704,342	230,488,693	210,458,700	—11,479,200 <sup>3</sup>

<sup>1</sup> Gross revenue less commissions and allowances to postmasters and other small items.  
rental of semi-staff and staff post offices.

<sup>2</sup> Excludes

<sup>3</sup> In accordance with new accounting practice.

In the year ended Mar. 31, 1965, post office money orders, issued for any amount not exceeding \$100 and payable in almost any country of the world, were sold at more than 9,137 post offices and money orders payable in Canada only, for amounts not exceeding \$15.99, were sold at some 1,531 additional post offices. Table 11 shows the amount of money order business conducted by the Postal Service in recent years.

#### 11.—Operations of the Money Order System, Years Ended Mar. 31, 1961-65

A statement on the financial business of the Post Office Savings Bank will be found in Chapter XXV on Banking, Other Commercial Finance and Insurance.

### Section 3.—The Press\*

Daily newspapers published in Canada in 1965 numbered 120, counting morning and evening editions separately. They had a reported circulation of about 4,300,000—82 p.c. in English and 18 p.c. in French. Since surveys show that, on the average, a newspaper is read by three persons, it would appear that almost every Canadian who is old enough or literate enough to read examines a Canadian daily on a regular basis. Further, with net advertising revenues in 1964 of \$195,900,000, they far out-sell the 265 private radio stations (\$63,000,000) and the 66 private TV stations (\$58,000,000). Add to this the income from newspaper circulations (\$71,500,000) and it will be seen that Canada's dailies produce almost twice as much revenue as their competitors. The 13 dailies having circulations in excess of 100,000 accounted for over 53 p.c. of the total circulation. French dailies, as would be expected, have their widest circulation in Quebec where 11 of the 13 in existence in 1965 were published. Rural people are the main readers of weekly newspapers, which cater to local interests and exercise an important influence in the areas they serve. It should be mentioned that there are 77 independent ethnic daily or weekly newspapers contributing to Canadian culture and traditions. Published in many languages, often mixed with English, they enjoy a combined paid circulation of about 500,000 and serve 2,000,000 readers.

There are three main newspaper chains in Canada—the Thomson (27 dailies); the Southam (eight dailies); and FP Publications Ltd. (eight dailies). Although largest in numbers, the Thomson papers are smallest in circulation, tending to be small-city papers where the population can sustain only one daily. The Southams control about 20 p.c. of the total daily circulation, FP about 18 p.c. and Thomsons 7 p.c. About 60 p.c. of Canada's daily newspapers are privately owned or independent.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 103 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides its fellow members with the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada. CP now maintains a French-language service in Quebec which originates stories in French for the French-language press. For national distribution, news originating in Quebec in French is translated into English.

The United Press International of Canada is a limited company which is associated with the United Press International World Service of which it is an affiliate. From its headquarters in Montreal, it provides Canadian and international news and pictures to over 90 subscribers in Canada as well as being the outlet of Canadian news and pictures for world distribution through United Press International facilities. Agence France Presse maintains offices in Montreal and Ottawa and certain foreign newspapers have agencies in Ottawa to interpret Canadian news for their readers.

**Press Statistics.**—The following tables are based on data estimated from *Canadian Advertising*. Circulation figures are given for daily English-language and French-language newspapers only. Such circulation figures are relatively easy to obtain because, in their own interest, newspapers qualify for and subscribe to the Audit Bureau of Circulation; for these, ABC 'net paid' figures have been used. On the other hand, circulation data for foreign-language newspapers, weekly newspapers, weekend newspapers and magazines are incomplete and therefore not usable.

\* The introduction to this Section contains certain statements appearing in an article by Stuart Keate, Honorary President of The Canadian Press, published in *Press Journal*.

An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to 1958.

**Revenue from Printing and Publishing.**—One of the industrial groups for which information is collected by the DBS in its annual Census of Manufactures is the printing, publishing and allied industries group which includes establishments engaged primarily in the publishing and printing of newspapers, magazines, periodicals, books, almanacs, maps, guides and the like, as well as establishments printing such publications for publishers, publishing firms that do no printing, and engraving, stereotyping and allied industries. Of interest in connection with press statistics is the amount of revenue received by these industries from advertising and from subscriptions or sales, which is given for the years 1963 and 1964 in Table 16. Additional data on manufacturing activity of this industrial group are included in Chapter XVI on Manufactures.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

## PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services, including amusement services such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

### Section 1.—Merchandising and Service Establishments\*

The surveys of merchandising and service establishments centre around a census of such business establishments. The first census of this kind related to business transacted for the year 1930 and similar censuses were taken for 1941, 1951 and 1961. The 1961 census, however, collected a wider range of data than the previous censuses; gross margin

\* Prepared in the Merchandising and Services Division, Dominion Bureau of Statistics.

information was collected from retail stores and wholesalers, operating expense figures were collected from wholesalers and service businesses, and more information was sought about the operating characteristics of retailers and wholesalers. Detailed results are given in the census reports,\* and some elaborative data, additional to that contained in previous editions of the Year Book, are given in Subsection 1 following.

Each census of merchandising and service establishments forms a new base for intercensal monthly, quarterly and annual surveys, which are sample surveys for some businesses and full coverage for others. Because of the need for more frequent survey bases, it was considered advisable to take a less detailed census every five years instead of every ten, and to place more emphasis on the sample surveys during the intercensal period for the collection of detail such as commodity content of sales to retailers, gross margin data and the analysis of sales by type of buyer. The first quinquennial census was taken in 1966, data from which will become available about mid-1968. Subsection 2 of this Section contains current intercensal information on the distributive trades and continues to project the 1951 base; data related to the 1961 base will be available in 1967.

### Subsection 1.—1961 Census of Merchandising and Service Establishments

As stated above, this Subsection contains certain elaborative information relating to wholesale, retail and service establishments, which supplements summary data given in previous editions of the Year Book and available from census publications.

Table 1 summarizes operating results of selected wholesale trades for incorporated companies in various types of operation. The results give, as a percentage of sales, the gross margin, total operating expenses and a breakdown of expenses into selling, warehouse and delivery, general and administrative and other operating expense.

\*Vol. VI (Pt. 1) Census of Merchandising: Retail Trade (Series 6.1). Vol. VI (Pt. 2) Census of Merchandising: Wholesale Trade; Services (Series 6.2). Special subjects series.

<sup>2</sup> Figures withheld to avoid disclosure of individual operations.

### Subsection 2.—Intercensal Surveys of Wholesale, Retail and Service Establishments

#### Wholesale Trade

Total sales of wholesalers, estimated from the results of intercensal sample surveys, have increased continuously for several years, the amount in 1965 being \$12,170,000,000. As shown in Table 5, all business groups reported increases over 1964. These estimates represent only the sales of wholesalers proper, operations of agents and brokers or manufacturers' sales branches being excluded.

#### 5.—Wholesale Sales, by Kind of Business, 1961-65

NOTE.—Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale.

#### Retail Trade

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The value of retail sales, estimated from intercensal sample surveys, increased by 51 p.c. during the period 1956-65. Estimates, by province and by kind of business, for 1961-65, not adjusted for price changes, are shown in Table 6.

#### 6.—Retail Trade, by Province and by Kind of Business, 1961-65

because of rounding of the figures.

<sup>2</sup> Totals are not the exact addition of the components

**Farm Implement Sales.**—The value, at wholesale prices, of new farm implements and equipment sold in 1964 amounted to \$326,976,000, an increase of 13.6 p.c. over the value of such sales in 1963. Increases occurred in all regions except Quebec and in all major groups of implements except haying machinery and miscellaneous farm equipment. In addition to the amount spent on new machinery, \$53,156,000 was spent in 1964 for repair parts, 6.9 p.c. more than in 1963.

## 7.—Sales of Farm Implements and Equipment, by Province and by Major Group, 1960-64

**Consumer Credit.**—Total balances outstanding on credit extended to consumers by retail stores and certain financial institutions are increasing very rapidly. Although the financial institutions included in the survey do not cover all sources of consumer credit, returns from the selected holders indicate that balances outstanding on credit extended to individuals for the purchase of consumer goods and services have more than doubled since 1956. The figures in Table 10 do not include credit extended for commercial purposes.

**10.—Balances Outstanding on Retail Trade Credit and Loans Extended to Individuals for Non-business Purposes by Certain Financial Institutions, 1956-65**

Accounts outstanding on the books of retailers stood at \$1,323,800,000 at the end of 1965. Lumber and building material dealers and farm implement dealers, at one time included in these figures, have been omitted since 1958 so that the results now approximate more closely "consumer" credit.

**Service Establishments**

**Motion Picture Theatres.**—The receipts of motion picture theatres reached a peak in 1953 when they amounted to \$106,752,281; since then they declined each year to \$67,748,000 in 1962 but rose to \$71,641,505 in 1963 and \$78,347,715 in 1964. The number of regular theatres in operation continues to decrease although drive-ins show some advance in both number and receipts.

## 12.—Summary Statistics of Motion Picture Theatre Operations, 1963 and 1964

Item	1963			1964

**Motion Picture Production.**—In 1964 there were 71 private firms producing and printing motion picture films and filmstrips for industry, government, education, entertainment, etc. These firms employed 953 persons, paid out \$4,356,119 in salaries and wages and had a gross revenue of \$12,694,301. Films were also produced by government agencies but operating information concerning such production is not available. In addition, 12 firms in other business categories produced films in 1964 (44 entertainment and documentary films for television use, nine non-theatrical films, 62 commercial advertising films for television, one commercial advertising film for theatre use, one silent motion picture film and 69 other films). This production brought in revenue amounting to \$120,999.

Table 13 shows types of film produced by private industry, classified by major producing region, and by government agencies during 1964. Altogether, these agencies produced 65,619,923 feet of 16mm. film in black and white, 12,532,685 feet of 16mm. film in colour, 18,408,173 feet of 35mm. film in black and white and 1,593,686 feet of 35mm. film in colour.

## Section 2.—The Marketing of Agricultural Products

### Subsection 1.—The Grain Trade, 1964-65

At Aug. 1, 1964, stocks of the five major Canadian grains (wheat, oats, barley, rye and flaxseed) amounted to 770,721,000 bu., compared with stocks of 734,919,000 bu. at Aug. 1, 1963. However, total production of these grains was estimated at 1,156,951,000 bu. in 1964, some 19 p.c. less than the 1963 level of 1,431,172,000 bu., so that total estimated domestic supplies amounted to 1,927,831,000 bu. in 1964-65, compared with 2,166,294,000 bu. in the previous season.

Marketings in the Prairie Provinces during the crop year 1964-65 amounted to 664,686,000 bu., 10 p.c. below the 1963-64 level of 735,653,000 bu. but 20 p.c. above the ten-year (1953-54—1962-63) average of 555,092,000 bu. Reflecting smaller shipments of wheat, wheat flour, oats, barley and rye, total exports of the five major grains and their products, at 471,382,000 bu., were some 31 p.c. lower than the 1963-64 record figure of 679,381,000 bu., but 17 p.c. above the ten-year average of 404,185,000 bu. Although decreases were recorded for both exports and domestic use, total disappearance of these grains more than offset the 1964 production and, as a result, carryover stocks at July 31, 1965 amounted to 747,364,000 bu., a decrease of 3 p.c. from the 770,721,000 bu. at July 31, 1964.

Marketings of wheat, oats and barley continued under the compulsory crop-year pools system of the Canadian Wheat Board. As in 1963-64, an initial quota of 100 units was in effect at local delivery points at the beginning of the marketing year. Permit holders were entitled to deliver a maximum of 300 bu. of wheat or 800 bu. of oats or 500 bu. of barley or 500 bu. of rye or any combination of these grains which, when calculated on a unit basis, did not exceed 100. The initial unit quota was followed by general quotas based upon bushels per specified acre; specified acreage consisted of each permit holder's acreage seeded to wheat (including Durum), oats, barley and rye, the summer fallow acreage and the acreage seeded to eligible grasses and forage crops. The crop year commenced with the initial quotas in effect at all delivery points. The first general quotas were established in early September and were extended and increased as local country elevator space became available.

Flaxseed was placed on a delivery quota of the larger of 5 bu. per seeded acre or 200 bu.; this quota was increased on Sept. 21 to 10 bu. per seeded acre or 400 bu. and on Dec. 7 the quota was declared open for the remainder of the 1964-65 crop year. Rapeseed was placed on an initial delivery quota of the larger of 5 bu. per seeded acre or 200 bu.; on Oct. 26 the quota was increased in Manitoba and Saskatchewan to the larger of 10 bu. per seeded acre or 400 bu. and in Alberta to the larger of 8 bu. per seeded acre or 325 bu.; on Dec. 7 the quota was declared open in Manitoba and Saskatchewan, and in Alberta it was increased to the larger of 10 bu. per seeded acre or 400 bu.; on Dec. 21 the quota in Alberta was also declared open. Rye, which was contained in the specified acreage, was placed on a supplementary quota of the larger of 5 bu. per seeded acre or 200 bu. on Jan. 11, 1965, and as of Apr. 12 the delivery quota was declared open. A number of supplementary delivery quotas were established on oats and barley.

Stocks of grain in store at country and terminal elevators at Aug. 1, 1964 amounted to 458,331,000 bu., some 89,178,000 bu. less than at the same date of 1963. The space in commercial positions at the beginning of the 1964-65 crop year, combined with a good export movement, permitted a steady advance in delivery quotas even though large volumes of grain were being marketed at each quota level. Although a considerable portion of the 1964 crop had been harvested in a high moisture condition, the rapid movement required

to meet the fall shipping program did not permit preference to the movement of this grain until the close of navigation on the Great Lakes. On Dec. 7, the Canadian Wheat Board authorized delivery of wheat, oats, barley and rye having a moisture content of 15.7 p.c. and over, up to 4 bu. per seeded acre in excess of established quotas, provided such deliveries, when added to those already made under authorized quotas, did not exceed 6 bu. per specified acre.

In order to provide stocks of wheat required to meet export commitments and anticipated sales, the Board authorized two supplementary quotas for wheat, other than Durum, during the last half of the crop year. In opening these supplementary quotas, the Board initially gave preference to the delivery of wheat with a moisture content of 15.7 p.c. and over. The first supplementary quota was authorized on Feb. 1, 1965, and permitted delivery at all points of high-moisture wheat, other than Durum, up to the larger of 4 bu. per seeded acre or 200 bu. After Feb. 15, as space became available in excess of that required for delivery of the 6 bu. per specified acre quota, the 4 bu. supplementary quota was amended to allow the delivery of wheat regardless of moisture content. On Apr. 13 a second supplementary quota of the larger of 5 bu. per seeded acre or 200 bu. was authorized for high-moisture wheat, other than Durum; this was extended to wheat regardless of moisture, by station, as space became available in excess of that required to complete the 6-bu. general plus 4-bu. supplementary quotas. By the end of the crop year these amended supplementary quotas had been gradually extended to all delivery points in Western Canada, i.e., 6-bu. general plus 9-bu. supplementary (except Durum).

**Wheat.**—Domestic supplies of wheat for the 1964-65 crop year totalled 1,059,874,000 bu., an amount 12 p.c. below the 1963-64 figure of 1,210,692,000 bu. and 8 p.c. less than the 1956-57 record total of 1,152,162,000 bu. Both the 1964 production of 600,424,000 bu. and the carryover stocks of 459,440,000 bu. registered decreases from the 1963 levels of 723,442,000 bu. and 487,247,000 bu., respectively. Exports of wheat and flour, in terms of wheat, amounted to 399,594,000 bu., a figure sharply below the all-time high of 594,548,000 bu. exported in the preceding year but higher than both the ten-year average of 301,841,000 bu. and the long-term average of 262,241,000 bu. Domestic disappearance of wheat was 147,256,000 bu. compared with 156,704,000 bu. in 1963-64. Total disappearance, amounting to some 546,850,000 bu., was considerably less than the 1964 production and, as a result, carryover stocks at July 31, 1965 were 513,024,000 bu. compared with 459,440,000 bu. at the same date of 1964.

Initial payment for Western Canadian wheat in the 1964-65 crop year was \$1.50 per bu., basis No. 1 Northern in store Fort William—Port Arthur or Vancouver. There were no adjustment or interim payments on the 1964-65 wheat pool but on Feb. 25, 1966, the final payment was announced. Producers delivered 523,703,000 bu. of wheat, including 31,030,000 bu. of Durum; this was the third largest volume of wheat ever delivered by producers to the Board in a crop year. The amount of the final payment distributed to producers was \$200,107,000, of which \$12,281,000 was distributed to producers of Durum wheat. After deducting the 1-p.c. Prairie Farm Assistance Act levy, the average final payment on Spring wheat (other than Durum) was 38.124 cents per bu. and that on Durum was 39.579 cents per bu. The total payment for No. 1 Northern, basis in store Fort William—Port Arthur or Vancouver and prior to deduction of the PFAA levy, amounted to \$1.88683 per bu.

### SUPPLY AND DISPOSITION OF CANADIAN WHEAT CROP YEARS ENDED JULY 31, 1956-65

The crop year 1964-65 coincided with the third year of the fifth three-year International Wheat Agreement, which became effective Aug. 1, 1962. Sales under the Agreement continued to be quite widely distributed, with 27 of the 38 importing countries included in the pact purchasing wheat and/or flour from Canada. Purchases of Canadian wheat and flour under the terms of the IWA amounted to the equivalent of 207,603,000 bu. during 1964-65 and accounted for 35 p.c. of the total sales under the Agreement. Britain was the leading IWA market for Canadian wheat and flour, shipments to that country amounting to some 80,148,000 bu., followed by Japan taking 50,172,000 bu.; the Federal Republic of Germany, 20,509,000 bu.; Belgium and Luxembourg, 15,672,000 bu.; Cuba, 14,745,000 bu.; Venezuela, 9,123,000 bu.; India, 7,266,000 bu.; and the Philippines, 6,483,000 bu. The leading markets for Class II wheat and flour in 1964-65 were: Communist China, 62,370,000 bu.; Czechoslovakia, 26,245,000 bu.; Poland, 18,899,000 bu.; East Germany, 10,522,000 bu.; and U.S.S.R., 10,199,000 bu. During 1964-65, domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the IWA. Class II prices for all grades of wheat coincided with the IWA and domestic quotations.

**Other Grains.**—The supply and disposition of the major Canadian grains for the crop years 1963-64 and 1964-65 are shown in Table 16.

The initial payment for oats in 1964-65, basis No. 2 C.W. in store Fort William-Port Arthur, was 60 cents per bu., the same as in 1963-64; that for barley, basis No. 3 C.W. Six-Row in store Fort William-Port Arthur, was 96 cents per bu., also unchanged from the previous year. No interim payments were made on either grain during the crop year and final payments on the oat and barley pools were announced on Mar. 17, 1966. On oats, the final surplus for distribution was some \$6,850,000 and, based on a total of 38,759,000 bu. delivered to the 1964-65 pool, averaged 17.674 cents per bu. after deducting the 1-p.c. PFAA levy. For barley, based on deliveries of 71,426,000 bu. and a final payment for producers of some \$22,218,000, the average final payment was 31.107 cents per bu. after deducting the 1-p.c. PFAA levy. Total prices, basis in store Fort William-Port Arthur, realized by producers for representative grades prior to the PFAA levy were: No. 2 C.W. oats, \$0.77152 per bu.; No. 1 Feed oats, \$0.73064 per bu.; No. 3 C.W. Six-Row barley, \$1.26026 per bu.; and No. 1 Feed barley, \$1.18526 per bu. Deliveries of rye and flaxseed in Western Canada amounted to 7,347,000 bu. and 16,847,000 bu., respectively.

Combined exports of oats, bagged seed oats, barley, rye and flaxseed (including exports of oatmeal and rolled oats, malt, pot and pearl barley and rye flour and meal in terms of grain equivalent) amounted to 71,787,000 bu. during 1964-65, some 15 p.c. less than the 1963-64 exports of 84,834,000 bu. and 30 p.c. below the ten-year (1953-54-1962-63) average. Exports of Canadian oats in bulk totalled 14,727,000 bu. compared with 17,532,000 bu. shipped during 1963-64, the major markets being the Netherlands and the Federal Republic of Germany to which countries were shipped 5,201,000 bu. and 3,981,000 bu., respectively, compared with 8,410,000 bu. and 1,791,000 bu., respectively, the previous year. Other 1964-65 shipments went to the United States, 2,543,000 bu.; Italy, 1,170,000 bu.; Britain, 851,000 bu.; Belgium and Luxembourg, 514,000 bu.; and Ireland, 419,000 bu. In addition, exports of oatmeal and rolled oats amounted to the equivalent of 435,000 bu. in 1964-65 compared with 711,000 bu. the year before.

Exports of barley as grain amounted to 32,738,000 bu., 21 p.c. lower than in 1963-64. Most of the decline was accounted for by smaller shipments to Communist China, the United States and Czechoslovakia which countries received 2,005,000 bu., 7,738,000 bu. and no shipments, respectively, compared with 14,694,000 bu., 8,675,000 bu. and 3,022,000 bu., respectively, in 1963-64. Higher shipments were made to Britain, Japan and Italy, which received, respectively, 9,832,000 bu. compared with 9,546,000 bu., 8,854,000 bu. compared with 3,654,000 bu., and 2,418,000 bu. compared with no shipments in 1963-64. In addition, exports of Canadian barley as malt were the equivalent of 4,280,000 bu. compared with 5,409,000 bu. in 1963-64. Canadian malt was shipped to 24 different destinations, the major markets being: the United States, 1,403,000 bu.; the Philippines, 604,000 bu.; Venezuela, 390,000 bu.; and Puerto Rico, 328,000 bu.

Exports of Canadian rye amounted to 4,857,000 bu. in 1964-65 compared with 5,501,000 bu. in the previous year; the principal markets were the United States which took 2,487,000 bu. and Japan, 1,046,000 bu. Clearances of Canadian flaxseed moving overseas during 1964-65 amounted to 14,346,000 bu., 5 p.c. above the 13,638,000 bu. shipped in 1963-64. Britain, taking 4,776,000 bu., was the leading market followed by Japan with 4,051,000 bu. and the Netherlands with 2,039,000 bu. Exports of linseed oil were equivalent to about 1,336,000 bu. of flaxseed, most of it going to Britain.

In addition to the exports of the five principal grains and their products, trade in rape-seed amounted to 9,276,000 bu. in 1964-65 compared with 5,308,000 bu. in 1963-64 and mustard seed exports were 1,239,000 bu., an amount slightly higher than the 1,070,000 bu. shipped the previous year.

*Wheat Flour.*—Production of wheat flour in the crop year 1964-65 amounted to 39,107,000 cwt., about 22 p.c. lower than in the previous crop year. Similarly, wheat milled for flour at 87,209,000 bu. was 22 p.c. less than during 1963-64. Of the latter, about 76,286,000 bu. were Western Canadian spring wheat (other than Durum) and the remainder consisted of Ontario winter wheat, Durum and 'other'. Based on a daily operating potential of some 176,000 cwt., utilization of milling capacity averaged 76.7 p.c. in 1964-65 compared with 94.3 p.c. in the preceding year. Exports of wheat flour during the 1964-65 crop year amounted to 13,714,000 cwt., 43 p.c. smaller than in 1963-64.

**Subsection 2.—Livestock Marketings\***

The year 1965 was quite successful for livestock producers. Marketings of cattle and calves through commercial channels were the highest ever reached. With smaller meat supplies in the United States, a keen export market developed in the second quarter of the year and remained until mid-December; there were no imports of slaughter cattle from the United States during the year, although in 1964 30,878 United States butcher cattle were slaughtered in Canadian plants during a fairly short period. Domestic disappearance of beef from commercial supplies, at 1,357,000,000 lb., was up 6 p.c. from the previous year. Despite higher prices received during the better part of the year, the over-all averages for all cattle and calves were about the same as in 1964, the result of a heavier volume of cows marketed. Hog marketings were somewhat below 1964 but higher prices resulted in an all-time record commercial value of \$343,200,000. Sheep and lamb marketings continued their downward trend, following consistently lower production.

\* More detailed information is available from DBS annual report *Livestock and Animal Products Statistics* (Catalogue No. 23-203), and the Canada Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry production and disappearance are given on pp. 479-483.

<sup>1</sup> Includes Newfoundland for the first time. <sup>2</sup> Fed calves discontinued Jan. 1, 1965; included with steers and heifers. <sup>3</sup> Butcher calves not reported separately before 1965. <sup>4</sup> Grass calves discontinued Jan. 1, 1965; included with medium and common, all weights. <sup>5</sup> Includes injured hogs, ridglings and stags.

In addition to cattle sold through public stockyards and directly to packing plants, there were 36,122 cattle shipped from country points in one province to country points in another and 183,071 shipped direct on export, totalling 3,631,236. All provinces showed substantial gains. On a percentage basis, British Columbia made the best showing with a 67.4-p.c. increase due largely to a sharp rise in export sales but, numerically, the three largest cattle producers kept the previous year's trend—Alberta leading with an increase of 195,359, Saskatchewan with 165,523 and Ontario with 131,729 over 1964. The trend in calf marketings followed closely that of the cattle market, both in volume and in demand. A keen export trade developed during the heavy fall deliveries and stocker calves formed a large part of the movement to the United States.

Reversing the pattern of the previous two years, the dressed weight of cattle slaughtered at inspected packing plants declined nearly 12 lb., amounting to 530.7 lb. per carcass. This reduction was mainly attributed to heavy marketings of cows and heifers. Choice and good beef combined accounted for 49.3 p.c. of the total gradings compared with 54.3 p.c. in 1964.

Hogs graded at inspected and approved packing plants in 1965 plus those exported direct from country points totalled 7,077,126, 2.8 p.c. below the previous year. Most of the decrease took place in Ontario and Quebec. Hogs averaged 1 lb. less in weight in 1965, the average being 159.5 lb., but the over-all quality of hog output continued its gradual rise. The percentage of grade A hogs reached a new high of 41.1 p.c., up 2.1 p.c. from 1964.

### Section 3.—Storage and Warehousing

This Section carries data on licensed grain storage and the public warehousing industry only. Reference may be made to the 1963-64 Year Book, pp. 867-871, for information on other types of storage; later statistics may be obtained from the following sources: cold storage and storage of food—Economics Branch of the Canada Department of Agriculture; storage of petroleum and petroleum products—Energy Statistics Section of the Manufacturing and Primary Industries Division, DBS; customs warehouses—Port Administration Branch of the Department of National Revenue.

### Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 673,097,000 bu. at Dec. 1, 1964, which was an increase of 8,776,000 bu. over the capacity at Dec. 1, 1963; capacity was increased by 6,026,000 bu. in western country elevators and by 2,750,000 bu. in lower St. Lawrence ports. The movement of grain in and out of storage during the crop year 1964-65 is given at pp. 908-913; Table 23 gives the amounts in storage at three dates during the year. At July 31, 1965, 69.8 p.c. of the licensed storage capacity was occupied as compared with 61.8 p.c. at the same date in 1964.

### The Public Warehousing Industry

The summary statistics of the warehousing industry presented in Table 24 cover the operations of the majority of firms offering general merchandise and refrigerated storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

## 24.—Summary Statistics of Warehousing of General Merchandise and Refrigerated Goods, 1961-65

<sup>1</sup> Includes storage space for household goods amounting to 1,608,700 cu. ft. in 1961; 997,900 cu. ft. in 1962; 900,000 cu. ft. in 1963; 1,047,090 cu. ft. in 1964; and 969,586 cu. ft. in 1965.

## Section 4.—Co-operative Organizations

In 1964, 2,643 local co-operatives with membership of 1,600,000 reported a total volume of business of \$1,854,600,000 and assets of \$818,000,000. Compared with 1963, the number of reporting co-operatives declined by 62 and the membership by 52,000 but total business increased by \$173,000,000 or 10 p.c. Receipts in 1964 were derived as follows: marketing of farm products, \$1,268,700,000; sales of supplies, \$532,400,000; service revenue (trucking, grinding, chopping, etc.), \$40,000,000; and miscellaneous income (rent, interest, dividends, etc.), \$13,500,000.

Marketing and purchasing associations accounted for the bulk of co-operative business in 1964, having total revenues of \$1,780,600,000, and service and fishermen's associations for the remainder. Membership of marketing and purchasing associations decreased by 34,000 to 1,305,000, and the number of associations declined from 1,583 to 1,546. Sales of both farm products and supplies rose during 1964, the former by 13 p.c. to \$1,268,700,000 and the latter by 7 p.c. to \$532,400,000. Grain accounted for \$118,000,000 of the \$142,600,000 increase in sales of farm products. All provinces reported improved sales of farm products and supplies, with the greatest increases in Saskatchewan and Alberta as a result of higher wheat sales. Grain and livestock, concentrated in the Prairie Provinces, and dairy products, principally from Ontario and Quebec, were the most important farm products, comprising 52 p.c., 16 p.c. and 23 p.c., respectively of total farm marketings. Other farm sales consisted of fruits and vegetables, poultry and eggs, fish and miscellaneous items. The major supplies sold were food products (27 p.c.), feed and fertilizer (30 p.c.), and petroleum (16 p.c.); clothing, hardware, machinery, building materials, seeds and miscellaneous goods made up the remainder. Total assets of marketing and purchasing co-operatives reached \$697,500,000 at the end of 1964, and members' equity therein represented 48 p.c., compared with 45 p.c. in 1963.

Wholesale co-operatives are federations of local co-operatives that act as central marketing agencies for farm products and as wholesalers of farm supplies, machinery and consumer goods. These associations reported sales of farm products and supplies of \$382,300,000 in 1964, an increase of 7 p.c. over the previous year, and total assets of \$122,800,000 of which members' equity represented 36 p.c.

Service co-operatives, which provide such services as rural electrification, medical insurance, transportation, grazing, cold storage and seed cleaning, numbered 1,017 in 1964 with a membership of 281,000, a decrease of 23 and 18,000, respectively, from 1963; these decreases were mainly attributable to the nationalization of rural electrification associations in Quebec. Total volume of business amounted to \$46,839,000 compared with \$39,060,000 in 1963 and consisted of: service revenue, \$28,468,000; miscellaneous income, \$1,056,000; and sales of products and supplies, \$17,315,000. Total assets were \$105,145,000, against \$112,652,000 in 1963. Fishermen's co-operatives reported a membership of 10,000, fish sales of \$21,744,000 and supply sales of \$5,065,000 in 1964; comparable figures for 1963 were 10,000, \$19,525,000 and \$4,741,000, respectively.

Arctic co-operatives operating in the Canadian North have continued to progress steadily; at the end of 1964 they numbered 20, with sales totalling approximately \$1,000,000, share capital of over \$130,000, and reserves and undistributed savings of well over \$200,000. Two new co-operatives were incorporated in 1965.

**25.—Summary Statistics of Co-operative Marketing and Purchasing Associations, 1959-64 and by Province 1963 and 1964**

<sup>1</sup> Duplication exists as some associations market more than one product.

## Section 5.—Interprovincial Freight Movements\*

Certain interprovincial freight traffic statistics are available on the loadings and unloadings of goods carried by rail, water, motor transport and pipeline. Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water. The figures given in Table 27, however, do not give a precise measure of total interprovincial freight movement by rail; they indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade. For water-borne traffic, Table 28 shows tonnages of all cargoes unloaded at Canadian ports in both interprovincial and intraprovincial trade, by province of origin. Interprovincial and international traffic carried by Canadian registered trucks is shown in Table 29. Pipeline statistics are given in the Transportation Chapter, pp. 859-860.

\* Revised in the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

## PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

### Section 1.—Controls Affecting the Marketing of Farm Products

#### Subsection 1.—Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners for Canada which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

**The Board of Grain Commissioners for Canada.\***—The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three—a chief commissioner and two commissioners—reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C. The Executive Offices of the Board and other principal offices are situated at Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 1,100, including elevator staff.

On a fee basis, the Board provides official inspection, grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four assistant commissioners—one in Alberta, two in Saskatchewan and one in Manitoba. These assistant commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the

\* Prepared by W. J. MacLeod, Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

uniform quality of the top grades of Red Spring wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

The Grain Research Laboratory, located at Winnipeg, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed toward better understanding of what constitutes quality in cereal grains and toward improvement in the methods of assessing quality.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

**The Canadian Wheat Board.\***—The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada" and now operates under RSC 1952, c. 44 as amended. The Board accomplishes its objective through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by The Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulating the amount of grain delivered by the producer to the country elevator by the use of a quota system and, by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process—transporting the grain from the country elevators to large terminal elevators in Eastern Canada, Churchill or on the West Coast—is carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Government of Canada.

\* Revised by R. L. Kristjanson, Executive Assistant, The Canadian Wheat Board, Winnipeg, Man.

The fourth major step—storing and handling of the grain at terminal elevators—is done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William-Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Lakehead or Vancouver positions.

The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, producers may receive, through their elevator agents, cash advances on farm-stored grain in accordance with a prescribed formula. The purpose of this legislation is to make cash available to producers pending delivery of their grain under delivery quotas established by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge, and the general level of prices received by the Board is determined by competitive conditions in world markets. The only subsidy received by the farmer in the Canadian wheat marketing system is the part-payment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of 178,000,000 bu.

### **Subsection 2.—Controls Over Farm Products Other Than Grain\***

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy. Closely related is regulatory action designed to protect the consumer.

Producers have been concerned about another type of market control, namely that which will give either their organizations or a government agency influence over the price received. In a highly specialized commercial agriculture such as Canada now has, the producer is dependent on the price of his product for his livelihood. Canadian farmers

\* Prepared in the Economics Branch of the Canada Department of Agriculture, Ottawa.

have long attempted to obtain some measure of market control through voluntary organizations, mainly marketing co-operatives. All provinces have made provision for the incorporation of such co-operatives and most, if not all, have provided other assistance to them. In the federal field, the Agricultural Products Co-operative Marketing Act encourages marketing under a co-operative plan.

Other legislation provides for legal control over the marketing of agricultural products, either by a producers' board or a government agency. Legislation of this type includes that pertaining to milk control boards, to producer marketing boards and to industry marketing commissions. Measures pertaining to grain marketing have been reviewed in Subsection 1, pp. 923-925, and the Agricultural Stabilization Act, which provides price support for certain key products is discussed in the Agriculture Chapter, pp. 457-458.

**Product Controls.**—The federal and provincial departments of agriculture co-operate in establishing and enforcing grades of quality standards for various foods. Some control over size and type of containers used for distribution of agricultural products is exercised by the Canada Department of Agriculture and the Department of Trade and Commerce enforces regulations pertaining to weights and measures (see p. 934).

Controls related to health and sanitation in food handling are developed and enforced at all three levels of government—municipal, provincial and federal. Examples of provincial and municipal action include laws pertaining to the pasteurization of milk, inspection of slaughterhouses and sanitary standards in restaurants. At the federal level, inspection by the Health of Animals Branch of the Department of Agriculture of all meat carcasses that enter into interprovincial trade is required. The Food and Drug Directorate of the Department of National Health and Welfare has wide control over the composition of foods sold and over misleading advertising of foods and drugs.

**Marketing Controls.**—*The Agricultural Products Co-operative Marketing Act.*—In the late 1930s, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would give to the producer the maximum sales return for his product, less a maximum margin for handling expenses agreed upon in advance. Thus, the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has continuously served agricultural producers since 1939.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government may undertake to guarantee a certain minimum initial payment to the producer at the time of delivery of the product, including a margin for handling; sales returns are made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price paid to producers for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product.

Agreements have been made under this Act pertaining to a wide variety of agricultural products. In 1964 the only agreement made was with respect to apples for processing.

**Milk Control Legislation.**—Most of the provinces enacted milk control legislation before 1940. Many of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

In all provinces with such boards, the milk control board sets the minimum price which distributors in specified markets may pay producers for Class I milk, that is, milk actually sold for fluid consumption. In Ontario and British Columbia, formulas are taken

as a guide in the setting of minimum prices. Most provinces also set either minimum or fixed wholesale and retail prices for fluid milk. The wholesale and retail prices are fixed in Prince Edward Island, Nova Scotia and Saskatchewan; minimum prices are established in New Brunswick, Quebec and Alberta. However, maximum but not minimum prices are set in Manitoba and no control is exercised over milk prices at the wholesale and retail levels in Ontario and British Columbia; in these three provinces some degree of price competition between store and home delivery sales has developed.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk, and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, producers to give notice before ceasing to deliver milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

At the national level, a *Canadian Dairy Commission* has been established recently which will take over its full operating function on Apr. 1, 1967. This is a new departure in the area of agricultural marketing; it is the first time with any farm product that a national board and provincial boards have authority to deal with the same industry in their respective areas of jurisdiction. The Canadian Dairy Commission will complement provincial function in that its responsibility will be regulating the marketing and pricing of milk, and perhaps milk products, that move in interprovincial or international trade. Briefly, the function of the Commission is to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers with a continuous and adequate supply of dairy products of high quality. The Commission, beginning Apr. 1, 1967, will be the agency to administer the funds provided by the Federal Government for stabilization purposes.

*Producer Marketing Boards.*—During the 1930s strong support developed for legislation whereby agricultural producers could exercise legal authority under certain conditions to control the marketing of their produce. The Natural Products Marketing Act of 1934 attempted to provide this power at the federal level but proved *ultra vires*. The Natural Products Marketing (British Columbia) Act 1936 was *intra vires* of provincial government powers and provided the model from which marketing board legislation has evolved in all ten provinces.

While marketing board legislation has been revised from time to time on the basis of experience and there are variations in detail from province to province, the same basic powers are given to producers in all provinces. These powers include authority for a duly constituted producer board to control the marketing of 100 p.c. of a specified commodity produced in a designated area. A producers' board, in at least some provinces, may set production quotas for each farmer. One producers' board may control the marketing of several related commodities and the designated area may be either the whole or part of a province. A producer vote is usually required to establish a producer marketing board whose powers are delegated either by a provincial marketing board, which has certain supervisory authority, or by the Lieutenant-Governor in Council.

The powers of a producers' board provided by provincial legislation are necessarily limited to intraprovincial trade. Under the Agricultural Products Marketing Act, the Federal Government may delegate to a marketing board with respect to interprovincial and export trade similar powers to those obtained with respect to intraprovincial trade under provincial authority. This Act also gives the Governor in Council the right to authorize a provincial marketing board to impose and collect levies from persons engaged in the production and marketing of commodities controlled by it for the purposes of the board, the creation of reserves and equalization of returns.

In 1964 there were 88 such marketing boards organized in Canada, 54 of which were in the Province of Quebec and 17 in Ontario; each of the other provinces with the exception of Newfoundland had one or more boards. It is estimated that about one seventh of the 1964 farm cash income was received from sales made under the control of provincial marketing board plans, including the following commodities: hogs, certain dairy products, poultry, wool, tobacco, wheat, soybeans, sugar beets, potatoes, other vegetables, fruits, seed corn, white beans, honey, maple products and pulpwood. As at Oct. 31, 1965, 38 of these provincial boards had received an extension of powers for purposes of inter-provincial and export trade from the Federal Government. Seven boards had received authority with regard to seven commodities to collect levies in excess of administrative expenses.

## Section 2.—Combinations in Restraint of Trade\*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade that serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments that came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2, 32, 33, 33A, 33B, 33C and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. Although Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canada competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger that has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly that has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

\* Revised by D. H. W. Henry, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of the Registrar General, Ottawa.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any service he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused or counselled the refusal of supplies to a merchant if there were reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "loss-leaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Director of Combines Investigations and Research is responsible for investigating combines and other restrictive practices, and the Restrictive Trade Practices Commission is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Registrar General of Canada. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Registrar General, ordinarily required to be published within thirty days.

Under the provisions of the Act, general inquiries may be made into restraints of trade which, although not forbidden or punishable, may affect the public interest. The courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention or directing the dissolution of a merger or monopoly as the case may be. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. Prosecutions for offences against the substantive provisions of the legislation (other than Sect. 33C which is punishable only on summary conviction) may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada.

In the period Jan. 1, 1964 to June 30, 1966, the following reports of inquiries under the legislation were published:—

- (1) Alleged Combine in the Matter of a Call for Tenders by the Town of Duvernay for the Construction of Sewers and Water Mains.
- (2) Sale of Plumbing and Heating Supplies and Related Products in the City of Montreal and Elsewhere in the Province of Quebec.
- (3) Production, Distribution and Supply of Newspapers in the Sudbury-Copper Cliff Area.
- (4) Distribution, Supply and Sale of Plumbing Supplies and Related Products (Alberta).
- (5) Road Surfacing in Ontario.
- (6) Ottawa Milk Pricing, November 1961.
- (7) Pricing Practices in the Pencil Industry.

- (8) Monopoly in Distribution of Propane—British Columbia.
- (9) Thomson Newspapers' Acquisition of the Fort William Times-Journal.
- (10) Shipping Conference Arrangements and Practices.
- (11) Street Paving Tenders in the City of Hull.
- (12) The John Street Pumping Station Contract, Metropolitan Toronto.
- (13) Distribution and Pricing of Pesticides.
- (14) Pricing Practices of Miss Mary Maxim Ltd.
- (15) Pricing of Ready-Mixed Concrete, Windsor, Ontario.

These reports and copies of the annual reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of the Registrar General, Ottawa.

### Section 3.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1965, provincial government liquor control authorities operated 1,101 retail stores.

Table 1 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, *The Control and Sale of Alcoholic Beverages in Canada* (Catalogue No. 63-202).

#### 1.—Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1964 and 1965

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages levied by eight provinces.

## Section 4.—Miscellaneous Aids or Controls

**The National Energy Board.**—The National Energy Board was established by the National Energy Board Act, 1959 (SC 1959, c. 46) for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest

with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. The Board, which reports to the Minister of Energy, Mines and Resources, consists of a chairman, a vice-chairman and three other members.

The *National Oil Policy*, announced in 1961, had the initial objective of attaining certain target levels of oil production, including natural gas liquids. Production, which in 1960 had averaged only 544,000 bbl./day, averaged an estimated 923,000 bbl./day in 1965, an increase of almost 70 p.c. This increase was achieved by greater use of Canadian oil in domestic markets west of the Ottawa Valley and by extension of export sales to the United States and, as a result of the co-operation of the industry, the objectives of the Policy were achieved largely without formal regulation. The *National Power Policy*, announced in 1963, stressed the need for taking full advantage of evolutionary changes in the power industry for the provision of abundant electric energy at lowest possible cost and for a flexible export policy that would permit long-term export of large blocks of power to the United States to assist in the immediate development of large-scale Canadian power projects and the strengthening of Canada's balance-of-payments position. In pursuance of these aims, the Board co-operates with other agencies in the consideration of inter-provincial and international interconnection of electric power systems.

During 1965, the work of the Board included the issuing of 629 certificates, licences and orders, compared with 574 in 1964. Following public hearings, six certificates were issued authorizing the construction of additional oil pipeline facilities and a pipeline to transport liquid petroleum products, and one certificate was issued authorizing the construction of a new international power line; the licences and orders issued concerned the export of gas and electric power, the import of gas, the export of butanes by pipeline and the exemption orders, the latter relating to the construction of pipelines or branches or extensions not exceeding 25 miles in length. The Board also issued numerous orders relating to protection and safety in pipeline operation and carried out field inspections relating to the pressure-testing of new gas and oil pipelines, gas compressor and oil-pumping facilities and other pipeline installations. The financial aspects of operations of pipeline companies under the Board's jurisdiction received continual scrutiny and the rates charged by oil pipeline companies and the contractual arrangements for the purchase, sale and transportation of gas by gas pipeline companies remained under continual review.

During the year, the research work of the Board included: the study of project evaluation and rating procedures; the development of computer programs to simulate gas pipelines, optimize the design of a gas pipeline and schedule pipeline expansions and additions; and, in co-operation with other Government agencies, the design of a general framework for an activity-oriented regional model of the Canadian economy which, among other functions, will permit the rapid evaluation of possible changes in the great number of engineering, economic or policy factors that affect the energy sector of the Canadian economy. In addition, the Board was involved in several special studies, including those on the Lower Nelson River power sites, the St. John River power development, and the massive power failure of Nov. 9, 1965 involving Ontario and the eastern United States. The Board continued work on its comprehensive forecast of all forms of energy and supply and demand in Canada and also continued to co-operate, in energy matters, with the Canadian Standards Association Sectional Committee, the Emergency Supply Planning

Branch of the Department of Defence Production, the Petroleum Planning Committee of the NATO Wartime Oil Organization and the Organization for Economic Co-operation and Development.

**Trade Standards.\***—The Standards Branch of the Department of Trade and Commerce consolidates under one Director the administration of the National Trade Mark and True Labelling Act, the Precious Metals Marking Act, the Weights and Measures Act, the Electricity Inspection Act, and the Gas Inspection Act.

*Commodity Standards.*—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. This is exemplified in the National Trade Mark Garment Sizing Regulations which were passed on Mar. 16, 1961. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada or for which application for registration has been made must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Branch is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

*Weights and Measures.*—The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada; it also requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales by short weight or short measure. During 1965, 661,133 prepackaged articles were checked for weight or measure and 487,582 inspections of devices were made.

*Electricity and Gas Inspection.*—Responsibilities of the Standards Branch, under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 20 districts for administration of the two Acts and the staff numbers 212. During the year ended Mar. 31, 1965, 1,506,821 meters were tested. In 1964, there were 5,981,778 electricity meters and 1,590,546 gas meters registered in Canada.

**Patents.†**—Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

\* Revised by the Standards Branch, Department of Trade and Commerce, Ottawa.

† Revised by the Commissioner of Patents, Ottawa.

## 5.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1961-65

Item		1961	1962	1963	1964	1965
Applications for patents.....	No.	24,529	25,447	26,409	27,057	27,811

Fees received, net.....	\$	1,806,279	1,858,965	1,922,250	2,002,271	2,046,174

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to 23,451 in the year ended Mar. 31, 1965. Roughly, 68 p.c. of the patents granted resulted from inventions made by residents of the United States, 8 p.c. by residents of Britain and other Commonwealth countries and 5 p.c. by residents of Canada. Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1845 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Egypt, Germany, Ireland, Colombia, Czechoslovakia and Yugoslavia.

**Copyrights, Industrial Designs and Timber Marks.\***—Copyright protection is governed by the Copyright Act (RSC 1952, c. 55) in force since 1924. Protection is automatic without any formality. However, a system of voluntary registration is provided. Application for registration should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Canada belongs to the Universal Copyright Convention. This means that the works of Canadian authors are protected in the United States without the formality of compulsory registration or the obligation of printing in the United States, provided that, from the first publication, the work bears in a prominent place the following identification: ©, followed by the name of the proprietor and the year of publication.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States. Protection of industrial designs and of timber marks is afforded under the Industrial Design and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.

\* Revised by the Commissioner of Patents, Ottawa.

**Trade Marks.\***—The Trade Marks Office, a Branch of the Department of the Registrar General of Canada, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Union Label Act and the Shop Cards Registration Act. Correspondence relating to an application for registration of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the *Trade Marks Journal*, a weekly publication that also gives particulars of every registration of a trade mark and every registration of a registered user. The required fee payable on application for registration of a trade mark is \$25, for advertisement of an application \$15 and for registration of a person as a registered user of a trade mark, \$20.

**Subventions and Bounties on Coal.†**—A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals by equalizing as far as possible their laid-down costs with the laid-down costs of imported coals in various market areas. Since 1963, an addition to subvention regulations has also enabled eastern Canadian coals to be made competitive with imported residual fuel oils in the Atlantic Provinces and the Province of Quebec. Subvention assistance is authorized by annual Parliamentary vote and payments are administered in accordance with regulations established by Orders in Council.

\* Revised by the Registrar of Trade Marks, Department of the Registrar General of Canada, Ottawa.

† Revised by the Dominion Coal Board, Ottawa.

## 8.—Expenditure for Coal Subventions, by Province, 1961-65

NOTE.—Tonnages and expenditures shown in a given year, being on a calendar-year basis, are not necessarily in direct relationship; certain of the amounts include adjustments on movements of previous years.

## PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

Two series of figures are included in this part which, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures. The first, under the heading of "Administration of Bankrupt Estates" is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act); it gives information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in the second section under the heading of "Returns under the Bankruptcy and Winding-Up Act" which is compiled by the Dominion Bureau of Statistics. This series is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) and, since 1955, includes business failures only (see p. 939). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

The Bankruptcy Act, which became law in 1949 and has since been amended on a number of occasions, was again amended by SC 1966, c. 32. This amendment was instigated by many recent exposures and suggestions of illegal and improper practices by

persons who participate in some form of bankruptcy proceedings or administration, or who may be principals such as a debtor, the insolvent person, or a creditor. The amendment is not a complete revision of the Bankruptcy Act but is an interim measure designed to provide direct and immediate authority in the field of investigation and inquiry and to tighten the procedures and requirements in other areas, such as that of proposals which an insolvent person may make to his creditors or which a bankrupt may make to his creditors in the course of the administration of the estate. In other words, the amendment is intended to provide remedies in situations where it has been shown by experience that abuses of the bankruptcy process are most likely to occur, to correct abuses that have occurred in the administration of small estates and to provide special measures for the orderly payment of debts, thus protecting the public by the elimination of fraudulent practices.

## PART IV.—PRICES\*

## Section 1.—Index Numbers of Wholesale Prices

The term "wholesale prices" refers to transactions that occur below the retail level. It has more of a connotation of bulk purchase and sale than of any homogeneous level of distribution. Wholesale price indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: study of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and study of changes in physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

**General Wholesale Index.**—The general wholesale index mainly includes manufacturers' prices but also incorporates those of wholesalers proper, assemblers of primary products, agents and operators of other types of commercial enterprises which trade in commodities of a type, or in quantities characteristic of primary marketing functions. Prices are grouped according to a commodity classification scheme based on chief component material similarities. Indexes classified according to degree of manufacture are also available. In Table 1, the general wholesale index is presented for the period 1938-65. This index is used as a conventional summary figure against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials, for which separate price indexes have been constructed. Table 2 gives, for the years 1956-65, the general wholesale price index and two of its integral classifications—raw and partly manufactured goods, and fully and chiefly manufactured goods; also presented are two related systems—industrial materials and Canadian farm products. Annual price index numbers of non-residential building materials and residential building materials are given for 1956-65 in Tables 3 and 4, respectively. Indexes at a finer level of detail are published regularly in the DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002), which also contains current series on retail and security prices. Vol. 23 of that publication is a historical summary reaching back to the year 1867 for some series.

A system of wholesale price indexes called *Industry Selling Price Indexes 1956=100*, refers exclusively to manufacturing industries and includes approximately 100 industry and 175 commodity indexes. DBS Reference Paper No. 62-515 contains tables, explanatory text, charts and weights relating to these indexes; current indexes are published monthly in *Prices and Price Indexes* (Catalogue No. 62-002).

\* Prepared in the Prices Division, Dominion Bureau of Statistics.

## 1.—General Wholesale Index Annual Averages, 1938-65

(1935-39=100)

Year	Average	Year	Average	Year	Average	Year	Average
1938.....	102.0	1945.....	132.1	1952.....	226.0	1959.....	230.6
1939.....	99.2	1946.....	138.9	1953.....	220.7	1960.....	230.9
1940.....	108.0	1947.....	163.3	1954.....	217.0	1961.....	233.3
1941.....	116.4	1948.....	193.4	1955.....	218.9	1962.....	210.0
1942.....	123.0	1949.....	198.3	1956.....	225.6	1963.....	244.6
1943.....	127.9	1950.....	211.2	1957.....	227.4	1964.....	245.4
1944.....	130.6	1951.....	240.2	1958.....	227.8	1965.....	250.4

The general wholesale index averaged 2.0 p.c. higher in 1965, rising to 250.4 from the 1964 average of 245.4. The raw and partly manufactured goods index advanced 2.4 p.c. and the fully and chiefly manufactured goods index was 1.9 p.c. higher. The industrial materials index increased 0.2 p.c. over the same period and the Canadian farm products index rose 4.4 p.c. The latter series, however, is based on preliminary indexes for field products and total farm products, pending receipt of final participation payments from the Canadian Wheat Board.

## 2.—Annual Index Numbers of Wholesale Price Groups, 1956-65

The price indexes of building materials\* continued to rise in 1965. The non-residential index (1949=100) advanced to 146.8 and was 5.2 p.c. higher than the 1964 average of 139.6. The residential building materials index (1935-39=100, arithmetically converted to the base 1949=100 for comparability with the non-residential index) rose 4.5 p.c. over the same time period to 148.9 from 142.5.

\* Details of weighting and construction and historical series appear in DBS publications *Price Index Numbers of Residential Building Materials, 1926-48* (Catalogue No. 62-505) and *Price Index Numbers of Non-residential Building Materials, 1935-52* (Catalogue No. 62-506). Revised item list and weighting for the electrical component of the residential building materials index, effective July 1960, is available on request.

**Highway Construction Price Index.**—A system of annual base-weighted and current-weighted bid price indexes (1956=100) relating mainly to provincial highway construction was developed recently, by which price movement is shown for completed units of work such as earth excavation or crushed gravel in place. DBS Reference Paper 62-520 contains tables, explanatory text, charts and weights relating to these indexes. Current indexes are published from time to time in the monthly reports on *Prices and Price Indexes* (Catalogue No. 62-002).

**World Wholesale Price Indexes.**—Price changes within different countries have varied widely during the years. Comparisons of Canadian wholesale price indexes with those of other countries are given in Table 5.

## Section 2.—Consumer Price Index\*

The purpose of the consumer price index is to measure the movement from month to month in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. For a particular article or service, a price index number is simply the price of the article in one period of time expressed as a percentage of its price in a reference period, usually called a base period. However, indexes for individual goods may be combined to form indexes representing prices of broad groups of goods and services. Thus, the consumer price index relates to the wide range of goods and services bought by Canadian urban families. The index expresses the combined prices of such goods each month as a percentage of their prices in the base period 1949.

The group of goods and services represented in the index is called the index "basket" and "weights" are assigned to the price indexes of individual items for purposes of combining them into an over-all or composite index. The weights reflect the relative importance of items in expenditures of middle-size urban families with medium incomes. The basket is an unchanging or equivalent quantity and quality of goods and services. Only prices change from month to month and the index, therefore, measures the effect of changing prices on the cost of purchasing the fixed basket. The basket and weights now used in the index are based on expenditures in 1957 of families of two to six persons, with annual incomes of \$2,500 to \$7,000, living in cities of 30,000 population or over.

### 6.—Consumer Price Index Numbers, 1939-66

1945.....	75.0	1952.....	116.5	1959.....	126.5	1966.....	143.9

The behaviour of the consumer price index during the years of almost continuous economic growth following the end of the Second World War up to 1959 is discussed in the 1962 Year Book at pp. 928-929 and the movement during 1959-64 in subsequent editions.

Between 1964 and 1965 the rate of consumer price rise advanced, averaging 2.4 p.c., with the largest increases evident in health and personal care (4.6 p.c.), transportation (3.7 p.c.) and food (2.6 p.c.). In 1966 the accelerating trend continued with prices averaging 3.7 p.c. over the previous year. The largest increases occurred in food (6.3 p.c.), clothing (3.8 p.c.) and health and personal care (3.1 p.c.).

\* A comprehensive description of the index is contained in the publication *The Consumer Price Index (1949=100)*—Revision Based on 1957 Expenditures (Catalogue No. 62-513).

**Consumer Price Indexes for Regional Cities.**—Table 9 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparisons. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

### Section 3.—Consumer Expenditure

A continuing program of surveys of family expenditure in urban areas was begun in 1953, and surveys were conducted since then at two-year intervals up to and including 1959. No expenditure surveys were taken in 1961, the decennial census year, but the regular program was resumed in 1962, when monthly surveys of food expenditure were made throughout the year and a recall survey of the complete budget was made in February and March 1963. Early in 1965 a recall survey of the complete budget was made, referring to the calendar year 1964.

The primary purpose in most of these surveys was to collect information for reviewing and revising, when necessary, the weights of the consumer price index. Therefore the surveys, with the exception of those for 1959 and 1964, have been restricted to cover only the families comparable in composition and income level to the consumer price index target group which was selected for index number purposes from a nation-wide survey conducted in 1947-48. For each of the four survey periods covering 1953, 1955, 1957 and 1962, respectively, the program consisted of a series of monthly surveys in which the major objective was the collection of detailed expenditure data on food, followed by a recall survey of all expenditures and income for the same calendar year. Detailed results for each survey have been published in two series of occasional publications of which the latest are: *Urban Family Food Expenditure, 1962* (Catalogue No. 62-524) and *Urban Family Expenditure, 1962* (Catalogue No. 62-525).

In the 1959 and 1964 survey programs the monthly surveys were omitted and the recall surveys were enlarged in size and scope, referring in 1959 to all families and individuals in cities with populations of 15,000 or over, and in 1964 to all families and individuals in eleven cities. The decision to limit the sample in 1964 to selected major cities was based on the desire to produce representative data for individual cities, in contrast to the broader regional representation afforded by the 1959 survey. Summary results of the 1959 survey appear in the 1962 Year Book at pp. 934-937. Table 11 presented here gives 1964 results for families of two or more, classified by family income. Tables showing expenditures for individuals only and for all families and individuals combined will be published in *Urban Family Expenditure, 1964*.

For the 1964 survey a sample of 3,000 households was drawn from households which had been interviewed earlier in the monthly labour force surveys. The following cities were represented: St. John's, Halifax, Quebec, Montreal, Ottawa, Toronto, Winnipeg, Regina-Saskatoon, Edmonton and Vancouver. The number of usable family records obtained was 2,034, of which 1,723 were families of two or more. Characteristics of sample families are shown at the beginning of the table in the form of averages and percentages.

The classification of expenditures by income level shows how expenditures vary as family income increases. Although dollar amounts expended increase in all consumption groups as income increases, the proportions of total expenditure going to the basic necessities of food and shelter decline with rising income, reflecting the growing importance of other groups as more income becomes available for discretionary spending and as personal taxes account for a larger share of the family dollar.

11.—Patterns of Family Expenditure in Eleven Canadian Cities, by Income Group, 1964  
(Families of two or more persons)

## Section 4.—Security Price Indexes

Security price indexes measure, through time, the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on the Toronto, Montreal and Canadian stock exchanges. In the case of the mining and the two supplementary indexes (primary oils and gas, and uraniums), eligible issues are for producing mines and wells only. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the weekly common stock indexes (investors, mining and supplementary indexes) are Thursday's closing quotations. For the monthly preferred stock indexes, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The indexes express current prices as a percentage of prices in 1956. Monthly and certain weekly indexes appear in DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) and a weekly DBS report gives indexes on a weekly basis for all groups and sub-groups.

The investors index is comprised of three major groups, with relative importance indicated by percentage weights as follows: industrials, 67.5; utilities, 18.6; and finance, 13.9. Each major group is further divided into industry sub-groups corresponding to the standard industrial classification, adopted as the basis of classification in the revision of the index to the 1956 = 100 base. The mining index is composed of two groups: base metals with a weight of 64.6 p.c. and golds with a weight of 35.4 p.c. The two supplementary indexes of common stocks—primary oils and gas, and uraniums—and the index of preferred stocks are not divided into component groups.

## 12.—Index Numbers of Common Stock Supplementary Indexes and Prices of Mining Stocks, by Month, 1964 to Mid-1966

(1956 = 100)

Year and Month	Supplementary Indexes		Mining Stocks		
	Primary Oils and Gas	Uraniums	Golds	Base Metals	Composite

SECTION 5. TRADE BY SECTION AND STAGE OF FABRICATION.....	987		

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter and in Section 4 of Chapter XXIV. Following the special article on Canada's Participation in the Changing Pattern of World Trade, Part I gives detailed statistics of that trade. Part II outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure. Part III contains a review of the extent of travel between Canada and other countries in 1965, with estimates of the amount of money expended for that purpose.

## CANADA'S PARTICIPATION IN THE CHANGING PATTERN OF WORLD TRADE, 1953-66\*

In the years since 1953 Canadian exports have grown one and a half times. Recently the pace has been faster, with an expansion of 60 p.c. in the past four years—as much as in the previous decade. Meanwhile, world trade has more than doubled since 1953 and its composition and direction have changed remarkably. But before looking into the changing character of the world market, it might be well to review the highlights of Canadian trade trends in this period.

### Canadian Exports

Following the post-Korean War decline, Canadian exports climbed sharply during the resource-development boom of 1954-56, but in the following four years sales inched up only slowly, while unused new capacity overhung the resource industries and investment stagnated. Only the exceptional sales of uranium and aircraft avoided absolute declines.

\* Prepared by A. M. Coll, Assistant Director, Economics Branch, Department of Trade and Commerce, Ottawa.

However, in the six years after 1960 exports expanded continually and by the beginning of the centennial year had doubled their annual rate. Twice in that period wheat injected an unexpected boost to foreign sales, alone increasing its value by two and a half times to over \$1 billion. The impact of the major sales to Communist China in 1961 was exceeded only by the effect of the tremendous contracts with Russia in 1963-64. The latter subsided somewhat in the following year but flared up again in 1965-66. Meanwhile, the large contracts with China were renewed on a long-term basis.

Forest and mineral products, the other traditional resource commodities which encompassed about three quarters of exports in 1960, experienced a slower, more gradual pick-up in sales. This strengthened in the mid-1960s, achieving an advance of more than one half by 1966 and bringing in its wake a new, larger and steadier development of resource potential. In this period uranium declined temporarily to small proportions, and oil, natural gas and iron ore gained new impetus. The major metals, in turn, enjoyed strong expansion and potash and sulphur approached the major status held by asbestos. Newsprint and lumber also exhibited new growth and the continuing rise in kraft pulp blossomed into a major development boom centred in the interior of British Columbia.

In the 1960s, however, the pace was set by end-products (non-food). In the previous decade sales, if anything, had fallen back from immediate postwar levels and had declined to only 8 p.c. of all exports but, in 1960-63 alone, end-product sales nearly doubled, with aircraft and related electronic apparatus leading a wide range of items. Recently, under the "Automotive Agreement" exchanges with American counterparts multiplied many times. This along with strong growth in items such as machinery again more than doubled end-product exports, which early in 1967 comprised one quarter of all exports.

The direction of Canadian exports has not changed basically in the past dozen or so years. The United States continues to receive 55 p.c. to 60 p.c. of Canadian shipments. Overseas, however, there has been a slight and gradual diminution of the share to Britain

although other markets have grown in importance. The share sustained by "other Commonwealth and Preferential" countries indicates the continuing value of these relationships. It suggests that Britain's lesser market role is a reflection of slower growth in contrast to burgeoning demand in Continental Europe, Japan and the Communist countries.

### Canadian Imports

In the 1953-66 period, Canadian purchases of foreign goods more than doubled. During the resource-development boom of 1954-57, imports, particularly of machinery and equipment, moved up faster and higher than exports. The deficits on commodity trade, which topped \$713,000,000 in 1956, persisted until 1960 but after that, imports increased at a slightly slower pace than exports, with the notable exception of 1965. Approaching a value of \$10 billion in 1966, Canada presents the sixth largest market in the world, ranking close to Japan. The greater part of this market is for machinery, transportation and electrical equipment, and producers materials such as fuels, metals, chemicals, foodstuffs, textiles and fibres. In addition, a wide range of consumer durables, apparel, foods, and other personal goods are received each year.

Throughout the postwar era, the United States supplied about 70 p.c. of these goods. Increased availability and competition from overseas sources reduced this proportion slightly in the early 1960s but, as a result of the exceptional growth in North America in the past three years and the extra spur of the Automotive Agreement, the American share recovered to 72 p.c. in 1966. Imports from Britain levelled out after the "foreign" car boom at the turn of the decade, but other Commonwealth suppliers benefited from the rise in sugar prices a couple of years ago. The remaining overseas countries retained their postwar high of 17 p.c. of the Canadian market which they reached in 1958. Among them, Western Europe and Japan play a prominent role, as do Venezuela and the Middle East oil-producing countries.

### General Trend of World Trade\*

World trade experienced almost unbroken and unprecedented growth in both value and volume in the past decade or so. It expanded even faster than physical output, illustrating that countries have been moving toward a higher level of economic interpenetration and specialization of production. The value of exports increased from \$83 billion in 1953 to \$186 billion in 1965, a rise of 125 p.c. or 7 p.c. annually. In volume, the increase was similar since over-all prices were little different at the end of the period.

The expansion of trade, of course, was not at a uniform pace over the years nor in equal measure in all countries and for all commodities. International trade fell sharply during the cyclical slump of 1958 but, in response to the subsequent upswing of demand, recovered quickly to new heights. The rapid rate of expansion attained from 1955 to 1957 was reached again in 1960, followed by a moderate deceleration in 1961-62. Then in 1963-64 the growth of world commerce gained new speed to 10 p.c. annually, moderated to 7 p.c. in 1965 and quickened again in 1966.

### Comparative Trends in Market Regions

The expansion of trade in the past dozen years resulted mainly from stronger demand in the industrial countries; in particular, Japanese imports climbed by 11 p.c. a year and the European Economic Community (EEC) raised its purchases 10 p.c. annually. Trade in Eastern Europe also increased at an average of over 8 p.c. although, in view of its modest beginning and until recently its concentration within the Communist bloc, the effect on general world trade was limited. Imports of the developing countries, on the other hand, grew at a much slower rate, averaging about 4 p.c. a year, thus acting as a drag on the general growth of world imports. Nevertheless some of the industrial countries, notably Canada, the United States and Britain, performed at an only slightly faster rate.

\* All values hereafter are in international units (= \$U.S.).

## TRENDS OF WORLD IMPORTS BY MAJOR MARKETS, 1953-65

About half of the increase in world trade since 1953 occurred in Western Europe. The growth was largest and quickest in the EEC, which more than trebled import values, while purchases by North America nearly doubled and those by developing regions grew by three quarters. Consequently, the EEC's share of world imports rose from 18 p.c. to 25 p.c. Germany and Italy recorded the most rapid increases over the whole period, while the growth for France and the Low Countries has been especially strong since 1958-59.

Imports by FinEFTA (the European Free Trade Association and Finland), which more than doubled in value from 1953 through 1965, nearly maintained their share of the world's total, changing only from 17.9 p.c. in 1953 to 17.1 p.c. in 1965. For both the EEC and EFTA a very appreciable increment stemmed from freer intra-group trade, which grew more rapidly than imports from outside countries. In the case of EFTA, however,

imports from within the group were, in 1965, still about one quarter of the total compared with above 40 p.c. in EEC. British imports, however, grew more slowly than the European or EFTA average, gaining barely a sixth from 1955 to 1962, while the upsurge that followed was stopped by the restrictions of October 1964 and later. On the other hand, Scandinavian trade kept up with the European average, showing particularly strong growth in intra-Scandinavian exchanges. Meanwhile, Austria, Switzerland and Portugal together more than tripled purchases and the remaining West European countries as a group kept the average pace.

Eastern Europe's imports rose more quickly than those of Western Europe in earlier years although the initial level in 1953 was relatively small. The prime force at that time was internal trade within the Communist bloc. Although over-all trade growth has since slowed there has been renewed commercial contact with outside countries, in contrast to the intensification of internal exchange occurring in the west of the Continent. Eastern Europe's share of world purchases rose over the whole period from less than 10 p.c. to more than 11 p.c.

The United States remained the largest single import market by nearly doubling purchases in the dozen years after 1953. However, with faster growth elsewhere, their relative importance diminished appreciably from 13 p.c. to 11 p.c. of world imports. Similarly, Canada increased purchases about 85 p.c. but its share of the world market declined from 5.1 p.c. to 4.1 p.c.

Japan, of course, has had a spectacular, more than threefold rise in imports since 1953 and in 1965 provided 4.2 p.c. of the world market, having surpassed Canada in 1962. Moreover, Australia, New Zealand and South Africa were able to achieve healthier economic conditions and more satisfactory rates of growth than most other primary producers, particularly since 1962. Their total imports better than doubled in the 12 years to 1965, restricting the diminution in their share of world imports from 3.8 p.c. to 3.5 p.c.

The Middle East oil-producers, with dramatic growth in export earnings, increased their purchases fourfold from a narrow original position and in 1966 bought 1.2 p.c. of the world's imports. Imports by the other less-developed countries of Africa, Asia and Latin America increased much less than the world average, despite their sharply increased need for imported supplies to speed the pace of economic development. Imports of this large group expanded by three quarters from 1953 to 1965 but, as a share of world imports, fell from 26 p.c. to 20 p.c. Following the boom up to 1957, the rate of expansion of developing countries and their purchases abroad slackened and, as a consequence, imports by these countries have formed a steadily shrinking part of world imports.

Asia and Africa fared slightly better than Latin America in the past decade, even when the oil countries are excluded. Although the share of Asia and Africa in world imports declined to 15 p.c., their growth by half since 1956 compares favourably with the one-fifth addition to imports in Latin America which are now under 5 p.c. of the world market. Decolonization in the former regions brought some political problems but this general stagnation obviously reflects the lack of growth in export earnings and the acute shortage of development funds.

### **Commodity Trade Trends\***

Over the past decade or so, manufactured goods, especially end-products, formed the most dynamic component of international trade. The reduction of tariffs had a much stronger impact on trade in finished goods which were more highly protected than industrial materials. Meanwhile, trade in agricultural products remained shackled by a maze of tariff and other barriers devised to protect local farmers. Moreover, actual world demand for finished goods increased more rapidly than other sectors because of greater elasticity in rela-

\* International trade data are compiled according to the Standard Industrial Trade Classification (SITC) which differs somewhat from the Canadian commodity classification. For example, lumber, pulp and synthetic rubber are considered crude materials in SITC whereas in the Canadian classification they are considered fabricated materials; SITC combines crude and processed "energy materials" into a separate group, whereas in Canadian data they remain with other materials.

tion to incomes. At the same time, final demand for materials was restrained because of technological savings in the use of materials and the demand for higher quality in contrast to quantity. Furthermore, the trend of export prices was much more favourable for manufactured goods than for primary products.

For the whole period the volume of primary trade almost doubled and the volume of manufactures nearly tripled. The difference was accentuated by net price changes. While manufactures accumulated a one-tenth price gain, primary prices dropped one tenth between 1957 and 1962 but later recovered half the loss. As a result of these different rates of growth, the composition of international trade experienced quite substantial changes. In 1953 primary products constituted just over half and as late as 1958 about 46 p.c. of the total, but by 1965 their share was down below 40 p.c.

TRENDS OF WORLD TRADE BY COMMODITY GROUPS, 1953-65

The proportional decline of primary products in international trade was essentially the outcome of slow growth in food and agricultural materials, in which tropical products suffered a particularly sharp curtailment. Food and beverages, which made up 22 p.c. of all trade in 1953, were under 17 p.c. of the total in 1966. But some "higher income" items such as meat, fish, fruit and alcoholic beverages fared much better than "basic" items such as sugar, coffee, butter and tobacco. Cereals escaped a similar fate through the unforeseen and continuing shortfalls in the grain output of Communist countries.

A similar division existed among inedible crude materials, which also declined from about 18 p.c. of international exchanges in the period 1953-57 to about 13 p.c. in 1965. Oilseeds, hides and rubber showed limited increases while textile fibres, once a dominant sector, were especially sluggish. On the other hand, forest and mineral products held their own in the world market, primarily reflecting rapid growth in industrial activity in the advanced countries. The energy sector, which nearly maintained a one-tenth share of world trade, also saw a notable divergence between the slow demand for coal and the rapidly rising requirements for petroleum and its products.

In contrast, the share of manufactures in world trade rose continuously over the past dozen years. Already representing nearly half of world trade in 1953, the share advanced to over 60 p.c. by 1965. In recent years, three quarters of manufactured imports were absorbed by the industrial countries of North America, Western Europe and the Soviet area. A closer look at manufactures shows that some groups have expanded more rapidly than others, so that the internal composition has changed significantly in this period.

#### Commodity Shares of Manufactured Exports from Industrial Countries, 1954 and 1964

(Percentages of total)

Commodity	1954	1964
	p.c.	p.c.
<b>Fabricated Materials (inedible)</b> .....	<b>41.5</b>	<b>36.0</b>
Chemicals.....	11.8	12.3
Textiles.....	12.2	7.7
Metals.....	17.5	16.0
<b>End-Products (inedible)</b> .....	<b>58.5</b>	<b>64.0</b>
Machinery and transportation equipment.....	39.4	44.3
Other end-products.....	19.1	19.7
<b>All Manufactures</b> .....	<b>100.0</b>	<b>100.0</b>

The expansion in the shipments of machinery and transportation equipment stands out as the most dynamic element. In fact, its share of all exports rose from just over one sixth to nearly one quarter during the period. Exports of other (largely consumer) end-products and of chemicals were additional strong components. Since the metal group almost kept the average pace of manufactures, it was textiles that dropped sharply relative to the total; along with other "basic necessities" such as food, demand elasticities for textiles in relation to rising incomes could not match those of other products.

#### Trade Growth Comparisons

Trade among the industrial countries of relatively finished manufactured goods flourished in the past decade. Exports from Continental European countries advanced by 10 p.c. annually and Japan is now the source of seven times the value of goods shipped in 1953. Sales to industrial countries increased much faster than to developing areas. Often, countries with rapid growth, such as Italy and Japan, expanded their supply to the world faster than their intake and the same was true of France and other Common Market countries from 1956 to 1960. Growth was particularly rapid in regional trade—within the EEC, within Scandinavia, and between Japan and its Far East neighbours. On the other

hand, in the United States and Britain, where there was moderate growth in trade in the past decade, imports rose slightly quicker than shipments to others. For Canada growth was also moderate but, if recent years are averaged, it was balanced between imports and exports. For Scandinavia and other EFTA countries, exports also kept pace with imports but in other Western European countries merchandise imports spurted ahead, reflecting primarily the impact of new tourist expenditures in Spain and Greece.

Although demand for crude materials showed a limited increase, Russia and Eastern Europe grew rapidly as a source, as the Iron Curtain slowly lowered. But tight restrictions on capital, service and other financial movements required a close balancing with bloc imports, with the exception of occasional gold sales. Notably, shipments to developing regions rose faster than imports while the reverse was true of advanced countries.

**Regional Trade Pattern Trends, 1955-64**

<sup>1</sup> Includes exports from one country to another within group.

Meanwhile, the Middle East oil-producing countries quadrupled their exports as well as their imports. Since purchases were less than one third of sales in 1953, their trade surplus by 1964 climbed to \$5.3 billion on imports of \$2.3 billion; they supplied 4.2 p.c. of world trade but received 1.2 p.c. in return. On the other hand, except for the pick-up in 1963-64, exports of Australia, New Zealand and South Africa—mostly of wool and other farm products—grew very slowly; this tended to limit import growth, except in 1960 and in the recent development boom. The less-developed countries of Asia, Africa and Latin America had similar experiences of very slow growth in sales—under 60 p.c. for the whole period. This sluggishness was concentrated in tropical foods and agricultural materials and was reflected in declining prices and accentuated by the unstable political and social milieu. The effect was multiplied in that these countries increased sales less to each other, even though neighbours, than to the advanced countries—the opposite of Western European experience.

In summary, the developing countries increased supply to the world even less than their small increase in demand. Most of the trade growth was among the advanced countries, with the fastest growing economies (including those recovering from World War II damage) showing even stronger gains as suppliers than as recipients.

**Canada's Share in World Commodity Markets**

Canadian exports have moved from year to year in accordance with the general trend of world trade, although from 1959 to 1963 the one-fifth rise in Canadian exports was appreciably slower than the one-third increase in world exports. In 1964 and again in 1966 Canadian exports increased somewhat faster than the world total, which was in part the effect of exceptional demand in Russia and China for Canadian wheat. The relatively moderate expansion of Canadian exports at the beginning of the decade may be attributed in part to the existing high level of postwar sales in contrast to the war-damaged economies as well as to the concentration of direction and to the commodity composition.

Canadian exports are adjusting rapidly to changes in demand although they still exhibit substantial variations from the unfolding pattern of world imports. In 1965 inedible end-products accounted for one sixth of Canadian exports compared with 9 p.c. in 1960; in 1966 this share rose sharply to reach one quarter of all exports as 1967 began. This is a remarkable share increase, particularly in view of the rising total of Canadian exports. If one considers, moreover, that the share of products in world trade increased from about 29 p.c. to 33 p.c. in this period, it becomes evident that the make-up of Canadian exports is shifting heavily to the commodity groups that have shown most growth in the past dozen years. This picture is amplified somewhat by a glimpse at the trends in major sectors within the commodity groups.

Agricultural products and crude materials are still important in Canadian exports, forming nearly half of all shipments in 1965. Generally these primary products form only 30 p.c. of world imports, having declined continually from earlier pre-eminence. But if over-all trade in food has moved slowly, this cannot be said of meat, fish and alcoholic beverages nor of cereals. All of these loom large in foreign purchases from Canada in contrast to slow-moving items such as sugar and tropical beverages. Moreover, if there is a genuine freeing of trade in food, Canada might fare even better.

Canada's specialization in mineral and forest products as distinct from textile fibres, oilseeds, rubber and similar tropical or pastoral products again modifies the impact of sluggish markets for crude materials. The former are in fairly strong demand, being oriented to the buoyant industrial markets for durables, construction and packaging. Within the less buoyant group, it is apparent that man-made fibres and rubber have accentuated the stagnation of natural products and this also has favoured Canada to a certain degree. In the energy sector, the further discovery of oil and gas in Western Canada and the wider use of these materials throughout North America have improved Canada's fuel position quite notably.

Conversely, in the further-manufactured groups, Canada's exports have been conditioned until recently not only by specialization in a few resource-related sectors but also by the general organization of end-products and semi-fabrication industries inside the protected domestic market.

On the one hand, Canada is famous for newsprint and non-ferrous metals and world demand for these commodities has increased at a moderate pace. But world trade in semi-fabricated metals, paperboard, fine papers and chemicals has grown faster. Even more so have exchanges in machinery and equipment, where Canada's participation until recently

was limited largely to farm machinery and certain electrical items. The improved performance in the past few years is in part attributed to special defence and aid programs but also to a wider realization of the possibilities in rationalizing secondary industries in relation to the international market. This has been particularly evident in the upsurge in exchanges of automobiles and components.

### Canada's Participation in Major Foreign Markets

There is a wide appreciation of the particular part played by the United States and also by Britain and other countries in Canada's inflow and outflow of merchandise. However, less attention has been given to the role of Canada in the trade patterns of foreign countries.

It is not surprising that the Canadian impact is highest in the imports of the United States, its immediate neighbour. Canada's share of American purchases has been just under 23 p.c. in recent years, about the same as in the mid-1950s and nearly triple the 8-p.c. portion of the British market, usually the next highest Canadian impact. In both, a decline in share in the late 1950s was arrested—in 1957 in Britain and since stabilized; in 1960 in the United States followed by recovery. Canada is by far the largest single supplier to the United States, equalling the whole of Latin America and nearly rivalling all of Western Europe. In Britain, Canada is one of several main suppliers—trailing the United States but larger than any other single country. Yet EEC as a group is twice as large and Scandinavia and the other "Old Dominions" are larger. In both markets Continental Europe is increasing its share while developing nations are falling off the pace; meanwhile, Canada has maintained its share.

Over much of the period the 4-p.c. to 5-p.c. share of Japanese imports ranked third in the scale of impact—until Chinese wheat purchases changed the picture. Canadian sales did not keep up with general Japanese imports in the mid-1950s but by 1960 much of the ground had been regained and the position slowly improved up to 1964. Some of the decline in 1965 has since been recovered.

Australia, New Zealand and South Africa collectively rank next, with Canadian participation in imports reaching 3.6 p.c. These fellow "Dominions" in the "old" Commonwealth of the 1930s were traditional but never large proportional buyers from Canada, because of the parallel histories of industrial development. Sales fluctuated markedly, reflecting financial and industrial adjustments, but Canada's share in the period was not higher than in 1965.

It is perhaps surprising that Canada's impact in Latin American imports [excluding sterling (£) territories], at about 3 p.c. of total, is so close to that in the "Old Dominions" and nearly double the share obtained in developing £ countries. After a decline in the mid-1950s, Canadian participation in Latin America gained, particularly in recent years. Meanwhile, in the developing £ area, imports from Canada were under 2 p.c. of the total in this period and would probably have been much less without aid through the Colombo Plan and other Commonwealth channels. Nevertheless, there are wide variations in Canada's penetration throughout the Commonwealth. In particular, trade with the nearby West Indies has traditionally been important, although in recent years Canada's share has eased down below one tenth of their imports.

Continental Western Europe, however, is even farther down the scale of Canadian participation. Canadian exports to these markets are, of course, sizable and increasing but in relation to total volume they appear small—a little over 1 p.c. of Scandinavian imports and in the Common Market declining from about 2 p.c. to just over 1 p.c. The relaxation of barriers against end-products and the tremendous rise of intra-European exchanges has tended to overshadow imports of grain and industrial materials from Canada.

The dramatic rise of Canadian wheat purchases by Communist countries has radically altered the Canadian position in these markets. Current Chinese trade data are hard to obtain but it appears that Canada recently held up to one tenth of the restricted import market of this large but autarchic economy. The impact on Eastern Europe has been less striking because of their considerable exchanges within the region and their widening commercial contacts throughout the world. Nevertheless, in 1964 Canada supplied 2.4 p.c. of all Eastern Europe's imports, a many-fold rise from earlier shares. Moreover, considering Russia (U.S.S.R.) alone, the Canadian share has been even higher—surpassing 4 p.c. in 1964. This fell along with wheat sales in 1965 but climbed again in 1966.

CANADA'S SHARE OF SELECTED MARKETS, 1953-65

It will be noted that Canada does not have the preponderance in the supply of any country (or in their sales) that the United States and even Britain have as markets for and suppliers to Canada. This structural contrast makes Canada far more sensitive to their developing situations than they are to Canadian activities.

Furthermore, although Canada has held its own share in most markets of the world, the higher penetration of the American and British markets (which take nearly three quarters of Canadian exports) at a time when these economies were expanding less rapidly than Continental Europe and Japan tended to dampen Canada's over-all performance in the world market. By the same token, stronger growth trends in the United States in the past few years have created many of the opportunities for the recent rising trend in Canadian exports.

## PART I.—FOREIGN TRADE STATISTICS\*

## Section 1.—Explanatory Notes on Canadian Trade Statistics

**Sources.**—Canadian foreign trade statistics are compiled from information recorded on customs documents received by the Dominion Bureau of Statistics from the various customs ports in Canada with the following exceptions: *electricity* exports are based on reports received from the National Energy Board and imports are based on reports received from public utility companies; and *crude petroleum exported by pipeline*, statistics for which are reported directly to the Bureau by the pipeline companies. Record is kept of value and, whenever possible, of quantity. In considering trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

**Coverage.**—*Domestic exports* or *exports of Canadian produce* include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. *Re-exports* or *exports of foreign produce* include previously imported goods that are exported from Canada in the same form as when imported. From January 1964, re-exports have also included exports from customs warehouses.

*Imports*, as from Jan. 1, 1964, include all goods cleared by customs immediately on arrival in Canada, plus goods entered into customs warehouses rather than cleared on arrival. For 1963 and earlier years, imports included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods entered into customs warehouses and then re-exported, but there may be an important difference in the time at which warehoused goods are recorded as imports; some shipments entering customs warehouses remain there for several months before clearance.

The most important exclusions from export totals are: current coin, gold, goods shipped to Canadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, fuel and stores sold to foreign vessels and aircraft in Canada, settlers' effects, private donations and gifts, and identifiable tourist purchases—generally, all temporary exports and goods merely moving in transit through Canadian territory.

The most important exclusions from import totals are: current coin, gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, fuel and stores purchased by Canadian vessels and aircraft abroad, settlers' private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada—generally, all temporary imports and goods merely moving in transit through Canadian territory.

Beginning Jan. 1, 1964, Canada's trade statistics are compiled on a "General Trade" basis instead of on the "Special Trade" basis used previously. The main difference for figures recorded on the General Trade basis is that imports are entered as such whether the goods are cleared through customs for immediate domestic use or stored in a customs warehouse. Domestic exports remain the same on both bases but re-exports, after Jan. 1, 1964, include exports from customs warehouses which were previously excluded. Over a period of years, the totals of Canadian exports or imports would be almost the same on either basis but considerable differences might appear in individual years because of time of clearance and extent of business activity.

\* Based on statistical reports published by the External Trade Division, Dominion Bureau of Statistics.

From Jan. 1, 1960, a new category was established in both export and import statistics entitled "Special Transactions—Non-trade". This category includes certain commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types is now excluded entirely from published totals of Canadian merchandise trade and does not appear in this volume, but statistics for the classes of this category are contained in the regular monthly export and import reports.

Beginning with statistics for January 1961, a new export commodity classification was used, based on the Standard Commodity Classification developed by the DBS as a tool for integrating statistical series derived from different sources. Whereas the classification previously used classified commodities primarily according to the material of which they were chiefly composed, the new classification places commodities in sections mainly according to stage of processing and purpose, as follows: Live Animals; Food, Feed, Beverages and Tobacco; Crude Materials, Inedible; Fabricated Materials, Inedible; End Products, Inedible; and Special Transactions—Trade.

As from Jan. 1, 1964, a new commodity classification was also introduced for import statistics, based on similar concepts to those embodied in the export classification, so that there is now a closer approach to comparability between the two sets of statistics. As part of the change to the new classifications, the commodity detail shown in trade returns has been modernized by eliminating statistics on some commodities of minor significance and instituting new classes for many commodities of greater importance. The grouping system employed in the new classification also makes easier the identification of other commodities which may merit separate specification. For most of the commodities of greatest importance in Canadian exports, the classes of the new export commodity classification are substantially identical with those of its predecessor. The import classification is more extensive than the export classification and in its new form gives an up-to-date and comprehensive coverage of those commodities which constitute the bulk of Canada's import trade.

**Valuation.**—Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" (freight, insurance, handling, etc.). This definition would give values f.o.b. point of consignment for export but in practice it is not always followed. For example, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars, resulting in some overstatement of the value of exports for the period prior to June 1961 and some understatement of their value in subsequent years.

The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export but, at least in recent years, importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January 1959); raw cotton and crude petroleum (from January 1962, retroactive to January 1960); raw sugar (from January 1963, retroactive to January 1961); and all shipments individually valued at \$100,000 or more (from January 1964). Only about one fifth of the value of imports is covered by these specific checks.

**Country Classification.**—Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are, at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one

exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada from the United States. The effect of this procedure is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

The country sub-totals include trade with Commonwealth and other countries entitled to Preferential rates of duty (the Republic of Ireland and the Republic of South Africa).

**Discrepancies in Trade Statistics Between Canada and Other Countries.**—Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of crediting trade by countries, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

## Section 2.—Total Foreign Trade

In considering the figures in Sections 2 to 5, reference should be made to the explanatory notes on trade in Section 1. Exports and imports of gold are excluded from all tables.

### 1.—Value of Total Foreign Trade of Canada (excluding Gold), 1951-65

NOTE.—Figures have been revised to cover the adjustment for "Special Transactions—Non-trade"; see p. 968.

Year	Exports			Imports			Balance of Trade: Excess of Exports (+) Imports (—)

**Treatment of Gold in Trade Statistics.**—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed

minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons, movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

## 2.—New Gold Production Available for Export, by Month, 1958-65

(Millions of dollars)

Month	1958	1959	1960	1961	1962	1963	1964	1965

<sup>1</sup> Less than \$500.<sup>2</sup> Includes Alaska and Hawaii.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average ad valorem rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

## Section 4.—Trade by Commodity

This Section provides detailed information on the composition of Canada's exports and imports for 1964 and 1965. Table 8 shows exports and re-exports to and imports from all countries, Britain and the United States, classified by section; Table 9 gives detailed statistics of all commodities of any importance exported from Canada to all countries, to Britain and to the United States; and detailed statistics for imports into Canada by section and commodity appear in Table 10.

**Section 5.—Trade by Section and Stage of Fabrication**

This Section contains a series of statistics covering trade by stage of fabrication, based on the new commodity classification (see p. 968). The Section totals given in Tables 11 and 12 for the period from 1946 were compiled by converting statistics tabulated on the old classification to the new framework; old classes or fragments of classes were converted to appropriate new classes and changes in content, descriptions or codes of former classes were taken into account as much as possible, but the results for 1957 and previous years are subject to some limitations. (Description of this series continues on p. 992.)

To classify exports and imports by Stage of Fabrication, that is, within the categories of Crude Materials, Fabricated Materials and End Products, requires a secondary classification of the commodities in certain Sections. Live Animals (Sect. I), being a natural product, is considered as crude materials; Food, Feed, Beverages and Tobacco (Sect. II) is allocated as follows: Crude Materials includes natural products not further processed than cleaned or prepared for shipment; Fabricated Materials includes commodities which are further processed and are used in processing industries rather than for direct human consumption, and also all commercial stock feeds; End Products includes commodities which are further processed and are mainly used directly for human consumption, and also prepared pet feeds. Sects. III, IV and V are clearly defined in the Standard Commodity Classification. Sect. VI contains relatively few classes; these have been pro-rated as necessary for both exports and imports according to studies undertaken over a number of years.

**Exports.**—An analysis of the figures for 1946-65 shows that the export totals followed an almost constantly upward trend, advancing 3.8 times, the most pronounced gains being made in 1959-65. Every Section recorded increases, ranging from 2.0 times for Food, Feed, Beverages and Tobacco, 3.4 times for Live Animals, 3.8 times for End Products, Inedible, 4.1 times for Fabricated Materials, Inedible to 9.6 times for Crude Materials, Inedible. Food, Feed, Beverages and Tobacco recorded a slight decrease in 1965 compared with 1964. During the period a variety of trends were discernible: Live Animals accounted for only about 1.0 p.c.; Food, Feed, Beverages and Tobacco accounted for a declining proportion ranging from 36.1 p.c. in 1946 to 18.0 p.c. in 1960 and 19.1 p.c. in 1965; and Crude Materials, Inedible rose from 8.1 p.c. in 1946 to 22.0 p.c. in 1962 and 20.7 p.c. in 1965. Fabricated Materials, Inedible accounted for the greatest proportion of the exports, averaging about 48 p.c. over the period. End Products, Inedible, in the five latest years, recovered the relative importance (13.7 p.c.) it had in 1946-49 when the over-all export totals were less than half those of today. Special Transactions—Trade remained unimportant at 0.2 p.c.

Analysis of exports by stage of fabrication shows that Crude Materials accounted for 35.1 p.c. of total exports in 1965, having increased 4.9 times since 1946 with larger advances in 1960-65. Fabricated Materials increased 3.7 times since 1946 and accounted for a decreased proportion of about 48 p.c. in the five latest years; End Products, although lower during a good portion of the 1946-64 period, increased substantially in the two latest years to almost threefold the 1946 total, and in 1965 accounted for some 19 p.c. of total exports.

**Imports.**—Total imports also showed an increasing trend; they advanced 4.7 times during the period 1946-65 but, except for 1965, aggregate gains since 1960 were less than those shown by exports. Food, Feed, Beverages and Tobacco, which accounted for about 10 p.c. of the total, increased 2.9 times; Crude Materials, Inedible, although increasing 2.4 times during the period, showed a consistently decreasing relative importance from a peak of 26.2 p.c. in 1948 to 11.7 p.c. in 1965. Fabricated Materials, Inedible, which also decreased in importance, increased 4.2 times; End Products, Inedible, the proportion for which fluctuated around 48 p.c. over the past ten years, increased 7.0 times; and Special Transactions—Trade, rose 11.4 times.

In the stage-of-fabrication analysis, Crude Materials increased 2.5 times in the 1946-65 period but accounted for a relatively decreasing proportion of total imports, dropping from a peak of 30.4 p.c. in 1950 to an average of about 20.0 p.c. in 1954-65; Fabricated Materials increased 4.1 times in 1946-65 with marked advances in the 1954-65 period; End Products advanced 7.0 times the 1946 value with greatest increases in the 1954-65 period and accounted for 56.2 p.c. of the total compared with 37.9 p.c. in 1946, averaging about 52.0 p.c. over the 1954-65 period.

## PART II.—THE GOVERNMENT AND FOREIGN TRADE

### Section 1.—Federal Foreign Trade Services\*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged so that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although numerous private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives. The federal Department of Trade and Commerce, the primary function of which is the promotion of external trade, makes available to business men a wide variety of services to assist them in selling their products abroad. These services are provided by the Department's head office in Ottawa, six regional offices in Canada, and a corps of trade commissioners stationed around the world.

Services available from the various branches, divisions and agencies of the Department of Trade and Commerce are described below. The work of these entities is interrelated, each operating in its own field but working closely with the others to effect the over-all objective of trade promotion.

**Trade Commissioner Service.**—The Trade Commissioner Service, as the overseas arm of the Department, is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 67 offices are maintained in 48 countries.

Every effort is made by Trade Commissioners to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian business men, they study potential markets for specific Canadian commodities and services. Economic reports provide background information necessary to the formulation of Departmental trade policy. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations, etc. Inquiries from local business men for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's trade commissioners travel extensively in their territories, visit leading industrial and commercial centres and call on government officials, business men, trade associations and municipal authorities. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian

\* Prepared in the several branches and agencies concerned, and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa.

products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with business men and bring into focus the Canadian commercial scene.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the trade commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor, Commercial Secretary or Assistant Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner or Assistant Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached and do not form part of a diplomatic mission, the Trade Commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

### CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT AUG. 25, 1966

- ARGENTINA.**—Commercial Counsellor, Canadian Embassy, Bartolome Mitre 478, Buenos Aires. Territory includes Paraguay.
- AUSTRALIA.**—  
 Sydney: Commercial Counsellor for Canada, P.O. Box 3952, A.M.P. Building, Circular Quay, Sydney. Territory includes States of New South Wales and Queensland, Capital Territory, Northern Territory, and Dependencies.  
 Melbourne: Commercial Counsellor for Canada, Mobil Centre, 2 City Road, Melbourne. Territory includes States of Victoria, South Australia, Western Australia and Tasmania.  
 Canberra: Commercial Counsellor, Office of the High Commissioner for Canada, Commonwealth Avenue, Canberra.
- AUSTRIA.**—Minister-Counsellor (Commercial), Canadian Embassy, P.O. Box 190, Vienna 1/8, Obere Donaustrasse 49/51, Vienna II. Territory includes Albania, Bulgaria, Czechoslovakia, Hungary, Romania and Yugoslavia.
- BELGIUM.**—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels 4. Territory includes Luxembourg, European Economic Community, European Atomic Energy Community and European Coal and Steel Community.
- BRAZIL.**—  
 Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Caixa Postal 2164-ZC-00, Edifício Metrópol, Av. Presidente Wilson 165, Rio de Janeiro.  
 São Paulo: Consul and Trade Commissioner, Canadian Consulate, Caixa Post 6034, Edifício Alois, Rua 7 de Abril 252, São Paulo.
- BRITAIN.**—  
 London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London W.1.  
 Liverpool: Canadian Government Trade Commissioner, Martins Bank Bldg., Water Street, Liverpool. Territory includes Midlands and North England.  
 Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George St., Glasgow C.2, Scotland. Territory includes Scotland.  
 Belfast: Canadian Government Trade Commissioner, 15-17 Chichester St., Belfast 1, Northern Ireland. Territory includes Northern Ireland.
- CEYLON.**—Commercial Division, Office of the High Commissioner for Canada, P.O. Box 1006, 6 Gregory's Road, Cinnamon Gardens, Colombo.
- CHILE.**—Commercial Counsellor, Canadian Embassy, Casilla 771, Agustinas 1225, Santiago.
- COLOMBIA.**—Commercial Secretary, Canadian Embassy, Apartado Aéreo 8582, Edifício Banco de los Andes, Carrera 10, No. 16-92, Bogotá. Territory includes Ecuador.
- CUBA.**—Commercial Division, Canadian Embassy, Gaveta 6125, Calle 30, No. 518 esquina 7ª Avenida, Miramar, Havana.
- DENMARK.**—Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen V.
- DOMINICAN REPUBLIC.**—Commercial Secretary, Canadian Embassy, Apartado 1393, Edifício Copello 408, Calle El Conde, Santo Domingo. Territory includes Puerto Rico.
- FRANCE.**—Minister-Counsellor (Economic/Commercial), Canadian Embassy, 35 Ave. Montaigne, Paris 8°. Territory includes Algeria and Morocco.

## GERMANY.—

Bad Godesberg: Commercial Counsellor, Canadian Embassy, Kennedy-Allee 35, Bad Godesberg. Territory includes States of Baden-Wuerttemberg, Bavaria, Hesse, Rhineland-Palatinate and Saar and West Berlin.

Duesseldorf: Consul, Canadian Consulate General, Koenigsallee 82, 4 Duesseldorf 1. Territory includes State of North Rhine-Westphalia.

Hamburg: Consul General, Canadian Consulate General, Ferdinandstrasse 69, Hamburg. Territory includes City States of Bremen and Hamburg; States of Lower Saxony and Schleswig-Holstein.

GHANA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 1639, E 115/3 Independence Ave., Accra. Territory includes Guinea, Ivory Coast, Liberia, Mali, Mauritania, Togo and Upper Volta.

GREECE.—Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens 138. Territory includes Turkey.

GUATEMALA.—Commercial Secretary, Canadian Embassy, P.O. Box 400, 5a Avenida 11-70, Zone 1, Guatemala City, C.A. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.

HONG KONG.—Senior Canadian Government Trade Commissioner, P.O. Box 126, P & O Building, 21-23, Des Voeux Road, Central Hong Kong. Territory includes Cambodia, Communist China, Laos, Viet-Nam and Macao.

INDIA.—Commercial Counsellor for Canada, P.O. Box 11, 13 Golf Links Road, New Delhi 1. Territory includes Bhutan, Ceylon, Nepal and Sikkim.

IRAN.—Commercial Counsellor, Canadian Embassy, P.O. Box 1610, Bezrouke Bldg., Corner of Takht Jamshid Ave. and Forsat St., Tehran.

IRELAND.—Commercial Secretary for Canada, 66 Upper O'Connell St., Dublin.

ISRAEL.—Commercial Secretary, Canadian Embassy, P.O. Box 20140, 84 Hahashmonaim St., Tel Aviv.

## ITALY.—

Rome: Commercial Counsellor, Canadian Embassy, Via G.B. De Rossi 27. Territory includes Libya and Malta.

Milan: Consul General and Trade Commissioner, Canadian Consulate General, C.P. 3977, Via Pirelli 19. Territory includes Provinces of Emilia-Romagna, Lombardia, Piedimonte, Trentino-Alto Adige, Veneto, Liguria, Trieste, Valle D'Aosta and Friuli-Venezia.

JAMAICA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 225, 32 Duke St. (corner Duke and Barry Sts.), Kingston. Territory includes Bahamas and British Honduras.

JAPAN.—Minister (Commercial), Canadian Embassy, c/o Akasaka Post Office 3-38, Akasaka, 7-Chome, Minato-ku, Tokyo. Territory includes Korea and Okinawa.

LEBANON.—Commercial Counsellor, Canadian Embassy, Botte Postale 2300, Alpha Building, Rue Clemenceau, Beirut. Territory includes Iraq, Jordan, Persian Gulf area, Saudi Arabia and Syria.

MALAYSIA.—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 990, A.I.A. Building, Ampang Road, Kuala Lumpur. Territory includes Brunei and Burma.

MEXICO.—Commercial Counsellor, Canadian Embassy, Apartado Postal 5-364, Melchor Ocampo 463, Mexico 5, D.F.

NETHERLANDS.—Commercial Counsellor, Canadian Embassy, Sophialaan 5-7, The Hague.

NEW ZEALAND.—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 12-049, ICI Building, Molesworth Street, Wellington. Territory includes Fiji, Tahiti, Tonga and Western Samoa.

NIGERIA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 851, Barclays Bank Building, 40 Marina Rd., Lagos. Territory includes Dahomey, Gambia, Niger, Senegal and Sierra Leone.

NORWAY.—Commercial Counsellor, Canadian Embassy, Fridtjof Nansens plass 5, Oslo 1. Territory includes Iceland.

## PAKISTAN.—

Rawalpindi: Commercial Secretary, Office of the High Commissioner for Canada, 17A Harley St. Annex. Territory includes Afghanistan.

Karachi: Commercial Secretary for Canada, P.O. Box 3703, Hotel Metropole, Victoria Rd.

PERU.—Commercial Secretary, Canadian Embassy, Casilla 1212, Edificio El Pacifico, Corner Avenida Arequipa and Plaza Washington, Lima. Territory includes Bolivia.

PHILIPPINES.—Consul General and Trade Commissioner, Canadian Consulate General, P.O. Box 1825, L & S Building, 1414 Roxas Boulevard, Manila. Territory includes Republic of China (Taiwan).

- PORTUGAL.**—Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4°D°, Lisbon. Territory includes Angola, Azores, Cape Verde Islands, Madeira and Portuguese Guinea.
- SINGAPORE.**—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 845, American International Building, Robinson Road and Telegraph St. Territory includes Indonesia and Thailand.
- SOUTH AFRICA.**—  
**Johannesburg:** Canadian Government Trade Commissioner, P.O. Box 715, Mobil House, Corner Rissik and De Villiers Sts., Johannesburg. Territory includes States of Natal, Orange Free State and Transvaal, and Angola, Botswana, Lesotho, Malagasy, Mauritius, Mozambique and Reunion.  
**Cape Town:** Canadian Government Trade Commissioner, P.O. Box 683, African Life Centre, St. George's St. Territory includes Cape Province, and St. Helena and South West Africa.
- SPAIN.**—Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni and Spanish Sahara.
- SWEDEN.**—Commercial Counsellor, Canadian Embassy, P.O. Box 14042, Skeppsbron 24, Stockholm. Territory includes Finland.
- SWITZERLAND.**—Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Tunisia.
- TRINIDAD AND TOBAGO.**—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 1246, Colonial Bldg., 72 South Quay, Port-of-Spain. Territory includes Barbados, Leeward and Windward Islands, Guyana, French Guiana, Surinam, Guadeloupe and Martinique.
- UNION OF SOVIET SOCIALIST REPUBLICS.**—Commercial Secretary, Canadian Embassy, 23 Starokon-yushenny Pereulok, Moscow.
- UNITED ARAB REPUBLIC.**—Commercial Division, Canadian Embassy, Kasr el Doubara Post Office, 6 Sharia Rouston Pasha, Garden City, Cairo. Territory includes Sudan and Ethiopia.
- UNITED STATES.**—  
**Washington:** Commercial Counsellor, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington, D.C. 20036. Territory includes District of Columbia.  
**New York City:** Deputy Consul General (Commercial), Canadian Consulate General, 680 Fifth Ave., New York, N. Y. 10019. Territory includes States of Connecticut, New Jersey (eleven northern counties) and New York, and Bermuda.  
**Boston:** Consul and Senior Trade Commissioner, Canadian Consulate General, 500 Boylston St., Boston, Mass. 02116. Territory includes States of Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.  
**Chicago:** Consul and Senior Trade Commissioner, Canadian Consulate General, 310 South Michigan Ave., Chicago, Ill. 60604. Territory includes States of Illinois, North Dakota, South Dakota, Minnesota, Wisconsin, Indiana, Iowa, Kansas, Kentucky, Missouri and Nebraska.  
**Cleveland:** Consul and Senior Trade Commissioner, Canadian Consulate, Illuminating Building, 55 Public Square, Cleveland, Ohio 44113. Territory includes State of Ohio.  
**Detroit:** Consul and Trade Commissioner, Canadian Consulate, 1139 Penobscot Building, Detroit, Mich. 48226. Territory includes State of Michigan.  
**Los Angeles:** Consul and Senior Trade Commissioner, Canadian Consulate General, 510 West Sixth St., Los Angeles, Cal. 90014. Territory includes States of California (ten southern counties), Arizona and New Mexico and Clark County in Nevada.  
**New Orleans:** Consul and Trade Commissioner, Canadian Consulate General, 225 Baronne St., New Orleans, La. 70112. Territory includes States of Louisiana, Texas, Oklahoma, Arkansas, Mississippi, Tennessee, Alabama, North Carolina, South Carolina, Georgia and Florida.  
**Philadelphia:** Consul and Trade Commissioner, Canadian Consulate, 3 Penn Center Plaza, Philadelphia, Pa. 19102. Territory includes States of Delaware, Maryland, New Jersey (nine southern counties), Pennsylvania, Virginia and West Virginia.  
**San Francisco:** Consul and Trade Commissioner, Canadian Consulate General, 333 Montgomery St., San Francisco, Cal. 94104. Territory includes States of California (except the ten southern counties), Wyoming, Nevada (except Clark County), Utah, Colorado and Hawaii.  
**Seattle:** Consul General, Canadian Consulate General, 1308 Tower Building, Seventh Avenue at Olive Way, Seattle, Wash. 98101. Territory includes States of Oregon, Idaho, Washington, Montana and Alaska.
- URUGUAY.**—Commercial Counsellor, Canadian Embassy, Casilla Postal 852, No. 1409 Avenida Agraciada Piso 7°, Montevideo. Territory includes Falkland Islands.
- VENEZUELA.**—Commercial Secretary, Canadian Embassy, Apartado del Este 11452, Avenida La Estancia No. 10, Ciudad Comercial Tamanaco, Caracas. Territory includes Netherlands Antilles.

**Trade Fairs and Missions Branch.**—It is the function of this Branch to organize and co-ordinate the Department's annual program of participation in trade fairs abroad and of outgoing and incoming trade missions. The Trade Fairs Abroad Division and the Trade Missions Division co-ordinate departmental activity in implementing these promotion programs and in organizing the trade fair exhibits and trade missions scheduled during the year. The Branch Director acts as chairman of the Departmental committees that select the program and the Division Chiefs preside over working committees appointed to handle detailed planning. The Branch also provides liaison with Trade Commissioner Service posts abroad, trade associations in Canada, provincial governments and other federal departments or agencies in the development of trade promotion programs.

In 1966 the Department of Trade and Commerce sponsored exhibits in 45 trade fairs abroad in such key markets as the United States, England, West Germany, France, Russia, Yugoslavia, Spain, Italy and Scotland. The products of hundreds of Canadian manufacturers were exhibited to potential foreign buyers numbering more than 15,000,000. The 26 trade missions organized in 1966 included 10 teams of Canadian business men sent abroad to study special markets in Europe, the United States, Latin America, Australia, New Zealand, Southeast Asia and the Mediterranean. Sixteen groups of business visitors were brought to Canada from Europe, Australia, the United States, Latin America, Japan and Malaysia.

**Trade Policy Service.**—The Office of Trade Relations and the Office of Commodity Trade Policy, established in September 1966, forms the Department's Trade Policy Service.

The main function of the Office of Trade Relations is to safeguard and improve terms of access for Canadian exporters in foreign markets. The Office is concerned with the conduct of Canadian trade relations with other countries, including the negotiation and administration of trade agreements and Canadian participation in international conferences and meetings dealing with trade and economic matters. It endeavours to find practical solutions for tariff problems and other difficulties encountered in foreign markets by Canadian exporters and, as a service to exporters, provides expert information, advice and assistance on foreign tariffs, import and exchange controls, documentation requirements and other foreign governmental regulations affecting Canada's trade. The Office also has responsibilities in relation to the export financing facilities available for the development of exports of Canadian capital equipment. The Area Divisions of the Office—Commonwealth, United States, European, Latin American and Asia and Middle East—are the central points of contact between Canada's trade commissioners abroad and the Department in Ottawa.

The Office of Commodity Trade Policy has two main areas of interest: it makes detailed commodity studies to ensure that the development of Canadian trade and related policies reflects the key role of export in economy, and it has the responsibility for international commodity policy work, including the negotiation of international commodity arrangements and related activities.

**Transportation and Trade Services Branch.**—The functions of this Branch relate to freight transportation matters, export and import controls, trade directories, the administration of the six Regional Offices and the provision of general guidance to firms seeking entry into the export field. These activities are conducted by three Divisions: the Transportation Division is concerned primarily with industrial transportation from the export shipper's point of view, with policies and practices affecting the movement of international trade, and with developments and trends in shipping services and freight rates; the Export and Import Permits Division administers the controls established under the Export and Import Permits Act; and the Regional Offices and Trade Services Division administers the Department's Regional Offices and compiles the Exporters' Directory, a confidential directory of firms engaged in or seriously interested in exporting commodities or services.

**Commodity Branches.**—The Commodities and Industries Services include three commodity branches—the Agriculture and Fisheries Branch, the Industrial Materials Branch and the Manufacturing Industries and Engineering Branch. These branches provide the main link between industry and the Department; they maintain close contact with the business community to be familiar with production and supply conditions in Canada. Emphasis is placed on the search for products and services, the sale of which can be promoted abroad.

The Agriculture and Fisheries Branch is organized into five divisions to cover fisheries, grain, livestock and animal products, plant products, and commodity arrangements and markets development. The Industrial Materials Branch is composed of three divisions to handle chemicals, forest products and metals and minerals. The Manufacturing Industries and Engineering Branch is organized into four divisions responsible for appliances and commercial machinery, electrical and electronic equipment, mechanical equipment and engineering, and textiles and consumer goods. These divisions are staffed by commodity officers who are specialists in their fields and are available to assist Canadian business men.

Commodity officers visit manufacturing plants and production facilities, attend and address meetings of business associations and study groups and prepare product reports and market surveys. They constitute the principal channel through which information on Canadian products and services reaches Canadian Trade Commissioners abroad and a channel through which information on sales opportunities in countries abroad is disseminated to industry in Canada. They continually analyse reports from Trade Commissioners abroad to determine potential markets for commodities and services of interest to Canadian industry. In co-operation with the Canadian Government Exhibition Commission, they assist in making arrangements for the display of commodities in trade fairs throughout the world to introduce Canadian products into new markets. They organize and accompany departmental trade missions and serve as delegates to international commodity conferences to study world market conditions and to consider corrective adjustments.

**Trade Publicity Branch.**—The function of the Trade Publicity Branch is to stimulate interest in Canadian products in foreign markets and to encourage Canadian manufacturers to look beyond domestic horizons. Advertising, public relations and publicity techniques are used in varying combinations to accomplish these objectives. Advertising, periodicals, booklets, brochures and other printed matter are used in direct support of trade fairs and missions; news releases, radio tape recordings and television film clips are employed to inform Canadians of foreign trade opportunities and successes.

The Branch is composed of an Operations Group and five Divisions. The Operations Group plans and executes the major activities concerning trade fairs and in-store promotions. Working closely with that Group is the Editorial Division which employs writers and editors, and the Art Division which is responsible for design, production and technical work. The Media Relations Division prepares and distributes press releases, articles, photographs, speeches and background material to newspapers, radio and television stations, magazines and the Canadian trade press. It provides publicity material for distribution abroad and produces and distributes films and television clips to promote interest in Canada as a supplier of many commodities. The Canada Courier Division produces *Canada Courier*, an illustrated, eight-page international trade promotion newspaper, published on behalf of Canadian exporters to promote products and services abroad. It has a circulation of 97,000 and is distributed in more than 100 countries. The English edition is published six times a year and the French, Spanish and German editions twice annually. The Foreign Trade Division publishes the magazine *Foreign Trade*, fortnightly, and *Commerce extérieur*, monthly. These journals, designed to help Canadian exporters, contain information on overseas markets, tariffs, exchange rates and other pertinent trade data.

**Canadian Government Exhibition Commission.**—The Commission organizes, designs, produces and administers all Canadian exhibits at fairs and exhibitions abroad in which the Canadian Government participates and also advises private exhibitors and their agents on the best means of displaying Canadian products at trade fairs. It acts as a central service agency for all government departments and agencies in the preparation of conventional exhibits and displays for showing in Canada and is responsible for international fairs and exhibitions held in Canada that are financed and sponsored by the Government of Canada.

Canadian purebred dairy cows received considerable attention at two Mexican livestock shows held late in 1966. The exhibit was sponsored by the Department of Trade and Commerce for the purpose of promoting exports and followed similar exhibits in France and Yugoslavia.

**Canadian Government Travel Bureau.**—The Canadian Government Travel Bureau is in operation to encourage tourist travel to Canada and to co-ordinate the tourist promotion conducted by the provinces, transportation companies and national, regional and local tourist associations. The Bureau undertakes extensive tourist advertising campaigns abroad, provides tourist publicity material for foreign newspapers, magazines, radio and television outlets, and annually handles about 1,500,000 inquiries from potential visitors to Canada. Tourist offices are operated in New York, Chicago, San Francisco, Minneapolis, Los Angeles, Boston, Philadelphia, Cincinnati, Rochester, Indianapolis, Cleveland, Detroit and Seattle in the United States; the Bureau also has representation in London, Paris, Frankfurt, Amsterdam, Mexico City, Tokyo and Sydney, Australia.

**Export Credits Insurance Corporation.**—This Corporation was established under the provisions of the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It operates in two fields—export credits insurance and long-term export financing.

Insurance is available to all persons or corporations carrying on business in Canada to cover export sales made on customary credit terms. It provides protection against risks involved in the export, manufacture, treatment or distribution of goods, or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the

buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or an export licence or the imposition of restrictions on the import or export of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country. The insurance is available under three main classifications—general commodities, capital goods and services. General commodities policies cover a policyholder's export sales to all countries except the United States for a period of one year, and are renewable. Two types are available: the contracts policy, which insures an exporter against loss from the time he books an order until payment is received; or the shipments policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services. The Corporation may also extend unconditional guarantees to Canadian chartered banks which will agree to provide non-recourse financing to insured exporters who have sold capital equipment abroad on medium-term credit.

The Corporation insures exporters on a co-insurance basis, the exporter retaining a small percentage of the risk involved, and the same principle operates in the distribution of recoveries obtained after the payment of a claim. When, in the opinion of the Minister of Trade and Commerce, a proposed transaction is in the national interest but would impose upon the Corporation a liability for a term or in an amount in excess of that normally undertaken, the Corporation may be authorized by the Governor in Council to enter into a contract of insurance at the Government's risk.

The Corporation also administers direct financing facilities available under the Act in cases where export sales involving capital goods are of such a nature as to warrant credit terms in excess of five years. The Corporation, when authorized by the Governor in Council, buys the promissory notes or other negotiable instruments of the foreign purchaser.

## Section 2.—The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs.

### Subsection 1.—The Canadian Tariff Structure\*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General.

*British Preferential Tariff* rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

\* Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff.

*Most-Favoured-Nation* rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

*General Tariff* rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

*Valuation.*—In general, the Customs Act provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold “(a) to purchasers located at that place with whom the vendor deals at arm’s length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions”. In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty ordinarily may not be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

*Dumping.*—Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. ad valorem. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices in the country of export.

*Drawback.*—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as “home consumption” drawbacks, is provided for under the Customs Act and the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

**The Tariff Board.**—The organization and functions of the Tariff Board are described at p. 140 of this volume.

### **Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Sept. 15, 1966**

Canada’s tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements providing for exchange of preferential rates are: Australia, Bahamas, Barbados, Bermuda, Guyana, British Honduras, Jamaica, the Leeward and Windward Islands, Trinidad and Tobago, New Zealand, Britain and its dependent territories and the members of the former Federation of Rhodesia and Nyasaland (Malawi, Rhodesia and Zambia). Canada also exchanges preferences with Ceylon, Cyprus, Malaysia, Malta and Sierra Leone and accords preferences to India, Pakistan, Ghana, Nigeria, Kenya, Tanzania and Uganda. Many of these countries are also members of the GATT. In addition, Canada has trade agreements with Ireland and South Africa under which preferences are exchanged.

Canada signed the Protocol of Provisional Application of the General Agreement on Tariffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1, 1948. The Agreement provides for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties, and lays down rules and regulations to govern the conduct of international trade.

At the beginning of September 1966, there were 70 full members in the GATT. These countries and the effective dates of their accession are indicated in the following list. In addition, Argentina, Iceland, Tunisia and the United Arab Republic were provisional members. The GATT is applied on a *de facto* basis to a number of newly independent states—Algeria, Democratic Republic of Congo, Maldive Islands, Mali, Singapore and Zambia—pending decisions as to their future commercial policies; Cambodia and Poland, although not members, participate in the work of GATT.

Trade relations between Canada and a number of other countries are governed by trade agreements of various kinds, by exchange of most-favoured-nation treatment under Orders in Council, by continuation to newly independent states of the same treatment originally negotiated with the countries previously responsible for their commercial relations, and by even less formal arrangements.

#### Tariff and Trade Arrangements with Commonwealth Countries as at Sept. 15, 1966

Country	Agreement	Tariff Treatment
AUSTRALIA.....	Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and margins and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BRITAIN.....	Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 20, 1947. GATT effective Jan. 1, 1948.	Various concessions are granted by each country including exchange of preferential tariff rates. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trusteeships.
CEYLON.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
COMMONWEALTH CARIBBEAN (BAHAMAS, BARBADOS, BERMUDA, BRITISH HONDURAS, AND THE LEEWARD ISLANDS, AND THE WINDWARD ISLANDS).	Canada-British West Indies Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. Protocol signed July 8, 1966 continues <i>ad interim</i> and amends Part I of the Canada-British West Indies Trade Agreement; terminates Part II of that Agreement and incorporates a number of additional provisions. Barbados, Bermuda, British Honduras and the Leeward and the Windward Islands participate in GATT.	The parties exchange specified tariff preferences.

**Tariff and Trade Arrangements With Commonwealth Countries  
as at Sept. 15, 1966—continued**

Country	Agreement	Tariff Treatment
CYPRUS.....	GATT effective Aug. 16, 1960.	Canada exchanges preferential tariff treatment with Cyprus.
GAMBIA.....	GATT effective Feb. 18, 1965.	Canada and Gambia exchange preferential tariff treatment.
GHANA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 18, 1957.	Canada accords British preferential treatment to Ghana, (except on cocoa beans). Ghana extends most-favoured-nation treatment to Canada.
GUYANA.....	Relations are based on the Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean).	The parties exchange specified tariff preferences.
INDIA.....	Since 1957 Canada has unilaterally accorded British preferential treatment without contractual obligation. GATT effective July 8, 1948.	Canada accords British preferential treatment to India. India extends most-favoured-nation treatment to Canada.
JAMAICA.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 6, 1962.	The parties exchange specified tariff preferences.
KENYA.....	GATT effective Dec. 12, 1963.	Canada accords British preferential tariff treatment to Kenya. Kenya extends most-favoured-nation treatment to Canada.
MALAWI.....	Malawi and Canada observe the terms of the 1953 Trade Agreement between Canada and the former Federation of Rhodesia and Nyasaland.	Canada exchanges preferential tariff treatment with Malawi.
MALAYSIA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 18, 1963.	Canada and Malaysia exchange preferential tariff treatment.
MALTA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1964.	Canada exchanges British preferential treatment with Malta.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally grant British preferential rates on items not scheduled. May be terminated on six months notice.
NIGERIA, FEDERATION OF.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 1, 1960.	Canada accords British preferential treatment to Nigeria. Nigeria extends most-favoured-nation treatment to Canada.
PAKISTAN.....	Canada unilaterally accords British preferential treatment without contractual obligation. GATT effective July 30, 1948.	Canada accords British preferential treatment to Pakistan.  Exchange of most-favoured-nation treatment.
RHODESIA.....	Canada does not recognize the present Government of Rhodesia.	Effective Nov. 11, 1965, Canada withdrew preferential treatment from Rhodesian goods, making them liable to the general tariff rate.  Effective Dec. 31, 1965, Rhodesia withdrew preferential treatment from Canadian goods and required that they pay the most-favoured-nation rate.

**Tariff and Trade Arrangements with Commonwealth Countries  
as at Sept. 15, 1966—concluded**

Country	Agreement	Tariff Treatment
SIERRA LEONE.....	GATT effective Apr. 27, 1961.	Exchange of most-favoured-nation treatment. Canada accords British preferential treatment to Sierra Leone. Sierra Leone extends most-favoured-nation tariff treatment to Canada.
SINGAPORE.....	GATT effective <i>de facto</i> Aug. 9, 1965, pending Singapore's decision on commercial policy. GATT effective Aug. 31, 1962.	Canada and Singapore exchange preferential treatment.
TRINIDAD AND TOBAGO.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 31, 1962.	The parties exchange specified tariff preferences.
UGANDA.....	GATT effective Oct. 9, 1962.	Canada accords British preferential tariff treatment to Uganda. Uganda extends most-favoured-nation tariff treatment to Canada.
UNITED REPUBLIC OF TANZANIA.	GATT effective for Tanganyika Dec. 9, 1961 and extended to Zanzibar upon formation of United Republic Apr. 23, 1964.	Canada accords British preferential tariff treatment to the United Republic of Tanzania. Tanzania extends most-favoured-nation tariff treatment to Canada.
ZAMBIA.....	GATT has <i>de facto</i> application for Zambia for a two-year period effective Oct. 24, 1964.	Exchange of most-favoured-nation treatment. Canada accords British preferential treatment to Zambia. Zambia extends most-favoured-nation tariff treatment to Canada.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at  
Sept. 15, 1966**

Country	Agreement	Tariff Treatment
ALGERIA.....	Franco-Canadian Trade Agreement of 1933 applied to Algeria. Algeria maintains a <i>de facto</i> application of the GATT.	Since the creation of Algeria as an independent state in 1962, Canada has continued to grant most-favoured-nation treatment.
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. Argentina has acceded to GATT provisionally.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG. ....	Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BENELUX (BELGIUM-NETHERLANDS-LUXEMBOURG CUSTOMS UNION).	(See Belgium-Luxembourg and Netherlands.)	

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at  
Sept. 15, 1966—continued**

Country	Agreement	Tariff Treatment
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of U.K.-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment.
BULGARIA.....	Trade Agreement signed Oct. 8, 1963; provisionally in force from date of signing.	Exchange of most-favoured-nation treatment and undertaking by Bulgaria to purchase a minimum of 300,000 metric tons of wheat or equivalent in flour during the three years validity of the Agreement.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.
BURUNDI.....	GATT effective July 1, 1962.	Canada grants most-favoured-nation treatment.
CAMBODIA.....	Franco-Canadian Trade Agreement of 1933 applied to Cambodia. Although not a full member, Cambodia takes part in the work of GATT under a special arrangement.	Since the creation of Cambodia as an independent state in 1955, Canada has continued to grant most-favoured-nation treatment.
CAMEROON.....	Franco-Canadian Trade Agreement of 1933 applied to Cameroon. GATT effective Nov. 28, 1960.	Exchange of most-favoured-nation treatment.
CENTRAL AFRICAN REPUBLIC...	Franco-Canadian Trade Agreement of 1933 applied to Central African Republic. GATT effective Aug. 14, 1960.	Exchange of most-favoured-nation treatment.
CHAD.....	Franco-Canadian Trade Agreement of 1933 applied to Chad. GATT effective Aug. 11, 1960.	Exchange of most-favoured-nation treatment.
CHILE.....	Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946. Covers the territory of China and Taiwan.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
COLOMBIA.....	Treaty of Commerce with Britain of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CONGO (BRAZZAVILLE).....	Franco-Canadian Trade Agreement of 1933 applies to Congo (Brazzaville). GATT effective Aug. 15, 1960.	Exchange of most-favoured-nation treatment.
CONGO (LEOPOLDVILLE).....	Belgo-Canadian Convention of Commerce of 1924 applied to Congo (Leopoldville). Maintains a <i>de facto</i> application of the GATT.	Since the Congo's independence in 1960, Canada has continued to grant most-favoured-nation treatment.
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at  
Sept. 15, 1966—continued**

Country	Agreement	Tariff Treatment
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
DAHOMEY.....	Franco-Canadian Trade Agreement of 1933 applied to Dahomey. GATT effective Aug. 1, 1960.	Exchange of most-favoured-nation treatment.
DENMARK (INCLUDING GREENLAND).	Treaties of Peace and Commerce with Britain of Feb. 13, 1660 and July 11, 1670, apply to Canada. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912 provides means for separate termination by Dominions on one years notice.
DOMINICAN REPUBLIC.....	Trade Agreement signed Mar. 8, 1940; in force Jan. 22, 1941. GATT effective May 19, 1950.	Exchange of most-favoured-nation treatment including scheduled concessions.
ECUADOR.....	<i>Modus vivendi</i> signed Nov. 10, 1950; in force Dec. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
EGYPT.....	(See United Arab Republic.)	
EL SALVADOR.....	Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. May be terminated on four months notice.
ETHIOPIA.....	Exchange of notes effective June 3, 1955.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FINLAND.....	Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FRANCE AND FRENCH OVERSEAS TERRITORIES.	Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice.
GABON.....	Franco-Canadian Trade Agreement of 1933 applied to Gabon. GATT effective Aug. 17, 1960.	Exchange of most-favoured-nation treatment.
GERMANY, FEDERAL REPUBLIC OF.	GATT effective Oct. 1, 1951.	Exchange of most-favoured-nation treatment.
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 24-28, 1947. GATT effective Mar. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
GREENLAND.....	(See Denmark.)	
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
GUINEA.....	Franco-Canadian Trade Agreement of 1933 applied to Guinea.	Since the creation of Guinea as an independent state in 1958, Canada has continued to grant most-favoured-nation treatment.
HAITI.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. GATT effective Jan. 1, 1950.	Exchange of most-favoured-nation treatment.
HONDURAS.....	Exchange of Notes signed July 11, 1956, effective July 18, 1956. Ratified in Honduras Sept. 5, 1956.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at  
Sept. 15, 1966—continued**

Country	Agreement	Tariff Treatment
HUNGARY.....	Trade Agreement signed June 11, 1964; provisionally in force from date of signing.	Exchange of most-favoured-nation treatment and undertaking by Hungary to purchase a minimum of \$24,000,000 of wheat and other unspecified products during the three years validity of the Agreement. Hungary is committed to purchase 250,000 metric tons of wheat.
ICELAND.....	Although there is no contractual obligation, Canada and Iceland adhere to the terms of a treaty originally concluded between Denmark and Britain on Feb. 13, 1960. Iceland has acceded to GATT provisionally.	Exchange of most-favoured-nation treatment.
INDONESIA.....	GATT effective Mar. 1, 1948.	Exchange of most-favoured-nation treatment.
IRAN.....	Special arrangement by Order in Council effective Feb. 1, 1951. Iran accorded most-favoured-nation treatment from Sept. 5, 1956.	Canada grants most-favoured-nation tariff rates as long as Iran accords reciprocal treatment.
IRAQ.....	Special arrangement by Order in Council effective Sept. 15, 1951.	Exchange of most-favoured-nation tariff treatment.
IRELAND.....	Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933. Trade Agreement is at present under review in the light of Anglo-Irish Free Trade Agreement effective July 1, 1966.	Canada grants British preferential tariff in return for preferential rates where such exist and for most-favoured-nation rates on non-preferential items. May be terminated on six months notice.
ISRAEL.....	Canada-U.K. Agreement of 1937 continued to apply to the State of Israel after its foundation in May 1948. GATT effective July 5, 1962.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
ITALY.....	<i>Modus vivendi</i> by exchange of notes of Apr. 23-28, 1948; effective Apr. 28, 1948. GATT effective Jan. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
IVORY COAST.....	Franco-Canadian Trade Agreement of 1933 applied to the Ivory Coast. GATT effective Aug. 7, 1960.	Exchange of most-favoured-nation treatment.
JAPAN.....	Agreement on Commerce signed Mar. 31, 1954; effective June 7, 1954. GATT effective Sept. 10, 1955.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
KUWAIT.....	Canada-U.K. Agreement of 1937 applied to Kuwait as a British Protectorate. GATT effective June 18, 1961.	Since independence of Kuwait in June 1961, Canada has continued to accord most-favoured-nation treatment.
LAOS.....	Franco-Canadian Trade Agreement of 1933 applied to Laos.	Since the creation of Laos as an independent state in 1955, Canada has continued to grant most-favoured-nation treatment.
LEBANON.....	Special arrangement by Order in Council of Nov. 19, 1946.	Canada grants most-favoured-nation tariff rates as long as Lebanon accords reciprocal treatment.
LIBERIA.....	Special arrangement by Order in Council effective Mar. 1, 1955.	Canada grants most-favoured-nation treatment.
LIECHTENSTEIN.....	(See Switzerland.)	
LUXEMBOURG.....	(See Belgium-Luxembourg.)	
MALAGASY REPUBLIC.....	Franco-Canadian Trade Agreement of 1933 applied to Malagasy Republic. GATT effective June 25, 1960.	Exchange of most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at  
Sept. 15, 1966—continued**

Country	Agreement	Tariff Treatment
MALI, FEDERATION OF.....	Franco-Canadian Trade Agreement of 1933 applied to Mali. Mali maintains a <i>de facto</i> application of the GATT.	Since the creation of Mali as an independent state in 1960, Canada has continued to grant most-favoured-nation treatment.
MAURITANIA.....	Franco-Canadian Trade Agreement of 1933 applied to Mauritania. GATT effective Nov. 28, 1960.	Exchange of most-favoured-nation treatment.
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947; definitively in force 30 days from that date.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
MOROCCO.....	Various agreements relating to former French, Spanish and International Zones of Morocco.	Since the creation of Morocco as an independent state in 1956, Canada has continued to grant most-favoured-nation treatment.
NETHERLANDS.....	Convention of Commerce of July 11, 1924. Suspended during war; reinstated by exchange of notes Feb. 1 and 5, 1946. Includes Netherlands Antilles and Surinam. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946; in force provisionally same date. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment.
NIGER.....	Franco-Canadian Trade Agreement of 1933 applied to Niger. GATT effective Aug. 3, 1960.	Exchange of most-favoured-nation treatment.
NORWAY.....	Convention of Commerce and Navigation with U.K. of Mar. 18, 1826, applied to Canada. GATT effective July 10, 1948.	Exchange of most-favoured-nation treatment. Convention of May 16, 1913 provides means for separate termination by Dominions on one years notice.
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of U.K.-Panama Treaty of Commerce of Sept. 25, 1928. Treaty terminated in 1942.	While contractual obligation has expired, Canada and Panama continue to exchange most-favoured-nation treatment.
PARAGUAY.....	Exchange of notes of May 21, 1940; in force June 21, 1940.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
PERU.....	GATT effective Oct. 8, 1951.	Exchange of most-favoured-nation treatment.
PHILIPPINES.....	No agreement.	Canada and Philippines, without contractual obligation, continue to exchange most-favoured-nation treatment (excluding preferences accorded by the Philippines to the United States).
POLAND.....	Convention of Commerce signed July 3, 1935, in force Aug. 15, 1936. Although not a full member, Poland takes part in the work of GATT under a special arrangement.	Exchange of most-favoured-nation treatment including scheduled reductions. May be terminated on three months notice.
PORTUGAL, PORTUGUESE ADJACENT ISLANDS AND PORTUGUESE OVERSEAS PROVINCES.	Trade Agreement signed May 28, 1954 provisionally in effect July 1, 1954, definitively in force on ratification Apr. 29, 1955. GATT effective May 6, 1962.	Exchange of most-favoured-nation treatment. Remains in effect for two years from ratification and thereafter unless terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at  
Sept. 15, 1966—continued**

Country	Agreement	Tariff Treatment
RWANDA.....	GATT effective Jan. 1, 1966.	Canada grants most-favoured-nation treatment.
SENEGAL.....	Franco-Canadian Trade Agreement of 1933 applied to Senegal. GATT effective June 20, 1960.	Exchange of most-favoured-nation treatment.
SOUTH AFRICA.....	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932.	Exchange of British preferential rates on scheduled items. May be terminated on six months notice.
	Exchange of notes Aug. 2-31, 1935; effective retroactively from July 1, 1935. GATT effective June 14, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
SPAIN AND SPANISH POSSESSIONS.	Since Aug. 1, 1928, Canada has adhered to U.K.-Spain Treaty of Commerce of Oct. 31, 1922.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
	Trade Agreement signed May 26, 1954, provisionally in effect July 1, 1954, definitively in force on ratification June 30, 1955. GATT effective Aug. 29, 1963.	Supplements and amends U.K.-Spain Treaty of Commerce. Remains in effect for three years from ratification, and thereafter unless terminated on three months notice.
SWEDEN.....	U.K.-Sweden Convention of Commerce and Navigation of Mar. 18, 1826 applies to Canada. GATT effective May 1, 1950.	Exchange of most-favoured-nation treatment. Declaration of Nov. 27, 1911 provides means for separate termination by the Dominions on one years notice.
SWITZERLAND.....	U.K.-Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855 applies to Canada. By exchange of notes Liechtenstein included under terms of this Agreement, effective July 14, 1947. GATT effective Aug. 1, 1966.	Exchange of most-favoured-nation treatment. Convention of Mar. 30, 1914 provides means for separate termination by the Dominions on one years notice.
SYRIAN ARAB REPUBLIC.....	Special Arrangement by Order in Council of Nov. 19, 1946.	Canada grants most-favoured-nation tariff rates as long as Syria accords reciprocal treatment.
TOGO.....	Franco-Canadian Trade Agreement of 1933 applied to Togo. GATT effective Apr. 27, 1960.	Since the creation of Togo as an independent state in 1960, Canada has continued to grant most-favoured-nation treatment.
TUNISIA.....	Franco-Canadian Trade Agreement of 1933 applied to Tunisia. Tunisia has acceded to GATT provisionally.	Since the creation of Tunisia as an independent state in 1956, Canada has continued to grant most-favoured-nation treatment.
TURKEY.....	Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. GATT effective Oct. 17, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
UNION OF SOVIET SOCIALIST REPUBLICS.	Trade Agreement signed Feb. 29, 1956, renewed for another three years Apr. 18, 1960 and again for the same period on Sept. 16, 1963 and again for the same period on June 20, 1966 (the extension to be valid from Apr. 18, 1966).	Exchange of most-favoured-nation treatment and undertaking by U.S.S.R. to purchase a minimum of 6,375,000 long tons of wheat and flour during the three-year period of validity of the extended agreement.
UNITED ARAB REPUBLIC (EGYPT).	Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952. The United Arab Republic has acceded provisionally to the GATT.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at  
Sept. 15, 1966—concluded**

Country	Agreement	Tariff Treatment
UNITED STATES.....	Trade Agreement signed Nov. 17, 1938; suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948.	Most-favoured-nation treatment exchanged.
UPPER VOLTA.....	Franco-Canadian Trade Agreement of 1933 applies to Upper Volta. GATT effective Aug. 5, 1960.	Exchange of most-favoured-nation treatment.
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Additional protocol signed Oct. 19, 1953. GATT effective Dec. 16, 1953.	Most-favoured-nation treatment.
VENEZUELA.....	<i>Modus vivendi</i> signed and brought into force Oct. 11, 1950.	Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal.
VIET-NAM.....	Franco-Canadian Trade Agreement of 1933 applied to Viet-Nam.	Since the creation of Viet-Nam as an independent state in 1955, Canada has continued to accord most-favoured-nation rates.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of U.K.-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928. GATT effective Aug. 25, 1966.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.

### PART III.—TRAVEL BETWEEN CANADA AND OTHER COUNTRIES

Travel, for pleasure and for other reasons, between Canada and other countries continues to increase year by year. It is natural that a good portion of this movement should be between Canada and the United States and that the inward movement from the United States should be somewhat greater than the movement from Canada to that country. Of the 33,890,000 visits of Canadians to other countries in 1965, more than 33,433,000 were to the United States, and of the 34,000,000 visits to Canada from other countries, 33,887,000 were from the United States. Each of these figures was up about 4 p.c. from 1964. However, in recent years, travel between Canada and overseas countries has been expanding at a proportionately greater rate than that between Canada and the United States. Canadian visits overseas in 1965 numbered 456,350, which was 16.5 p.c. higher than in the previous year, and the number of visitors entering Canada directly from overseas reached a total of 132,900, up 17.8 p.c. from 1964.

The effect of these increases in the number of visits to and from Canada and the resulting increases in the expenditures involved is of considerable importance to persons in the travel industry and also to those concerned with Canada's balance of payments position. In 1965 Canadians travelling outside the country spent an estimated \$796,000,000, an amount 12 p.c. more than in 1964, and expenditures of all visitors to Canada amounted to \$747,000,000, an increase of 13 p.c. over the previous year; the result was a deficit of \$49,000,000 compared with one of \$50,000,000 the year before. This deficit was more than accounted for by overseas travel, per capita expenditures on which are very much higher than on travel to and from the United States. While overseas visitors in Canada spent

about \$87,000,000 in 1965, Canadians visiting overseas spent \$248,000,000, a rise of 7 p.c. over 1964, increasing the debit balance on travel account with overseas countries to \$161,000,000 from \$159,000,000. On the other hand, payments by United States residents in Canada increased 12 p.c. to \$660,000,000 and expenditures by Canadian visitors in the United States (including Hawaii) increased 14 p.c. to \$548,000,000, creating a credit balance for Canada of \$112,000,000 compared with \$109,000,000 in 1964.

**Travel Between Canada and the United States.**—Much of the travel between these two countries is by car. Of the 33,900,000 visits of United States residents to Canada in 1965, 26,203,600 were made by this mode of travel; an 0.6-p.c. drop compared with 1964 was accounted for by a 4.5-p.c. decrease in the number of short-term travellers that was not quite offset by a 5.9-p.c. increase in the number of long-term visitors. On the other hand, larger average expenditure per person for both short-term and long-term visits in 1965 resulted in a 10.5-p.c. increase in total expenditure for United States visitors travelling by car, which amounted to \$439,601,000. Length of stay of travellers is always significant since it has an important bearing on the amount of money spent. For instance, 64.9 p.c. of the United States visitors to Canada in 1965 entered and left on the same day, yet accounted for only 11 p.c. or \$72,709,000 of the total amount spent by all United States visitors to Canada; the remaining 89 p.c., or \$587,134,000, was spent by visitors staying one or more nights, although these constituted only 35.1 p.c. of the total number.

Of other modes of travel from the United States, only rail showed a decline from the 1964 total, air and bus travel being up about 15 p.c. and boat travel about 5 p.c. In connection with the latter, it is interesting to note a few features of pleasure boat travel. Such craft entering Canadian waters from the United States in 1965 numbered 78,250, slightly fewer than in 1964. Ontario received 82 p.c. of the entries, Quebec 10 p.c. and British Columbia 8 p.c. Most of them entered during the April-September season and about 60 p.c. entered and left on the same day, although there was considerable variation among the provinces in length of stay, quite evidently depending on the distance between the United States and Canadian ports. Of those entering Ontario, where the ports are very close, 93 p.c. left on the same day; of those entering Quebec, where the ports are somewhat farther apart, 61 p.c. left on the same day; in British Columbia, on the other hand, where distance to be travelled between American and Canadian ports is much greater, 97 p.c. stayed one or more nights.

Canadian travel to the United States established new records in 1965 in both numbers and expenditures, although not all means of travel contributed to the increase as is shown in Table 2. Travellers by automobile comprised 79.5 p.c. of the total number and accounted for \$304,882,000, or 56.7 p.c. of the travel expenditure in the United States (excluding Hawaii), a total higher by 20 p.c. than in 1964. It is interesting to note that Canadians usually spend less time in the United States per visit than United States visitors spend in Canada. In 1965, 81.3 p.c. of the Canadians visiting the United States entered and left on the same day, compared with 64.9 p.c. of the United States visitors to Canada. Short-term Canadian visitors spent 10.5 p.c. of the total payments to the United States, the remaining 89.5 p.c. being spent by long-term visitors who made up only 18.7 p.c. of the total number.

Canadians travel to the United States for a variety of reasons—recreation accounted for an estimated 51.6 p.c. of the visits in 1965, visits to friends and relatives for 30.1 p.c., business for 11.7 p.c., health for 2.6 p.c., and shopping for 2 p.c. Residents of the Atlantic Provinces accounted for the highest percentage (40.4) travelling to the United States to visit friends and relatives; Alberta recorded the highest percentage (23.6) of business trips and Quebec recorded the highest percentage (57.1) of trips for recreation.

### 1.—Number and Expenditure of United States Travellers in Canada and Canadian Travellers in the United States, 1956-65

Year	U.S. Travellers in Canada	U.S. Expenditure in Canada	Canadians Travelling in U.S.	Canadian Expenditure in U.S.	Excess of U.S. Travellers in Canada	Balance of Payments with the U.S.

**Travel Between Canada and Overseas Countries.**—Of the 456,350 Canadian residents who travelled overseas in 1965, 386,350 returned directly to Canada and 70,000 via the United States. Travel expenditures in countries other than the United States amounted to \$347,000,000, of which \$167,000,000 was spent for oceanic transportation; airlines received about 89 p.c. of the overseas transportation costs paid by Canadians returning direct to Canada. Included in the oceanic transportation costs is about \$8,000,000 paid to United States carriers which are debited to the travel account of that country, and \$91,000,000 in fares to Canadian carriers which does not represent a movement of money outside Canada and therefore is not included in the net payments of Canadians travelling overseas.

From replies to questionnaires by Canadians returning directly from overseas, the following major destinations were estimated: Britain 96,000; France 82,000; Germany 69,000; the Netherlands 54,000; Switzerland 53,000; and Italy 48,000. In addition to the 96,000 persons visiting Britain only, some 88,000 visited both Britain and Continental Europe. These figures represent visits to the various countries and it is quite usual for one person to visit several countries on the same trip particularly on the Continent of Europe. Visits to the Caribbean area are estimated at 51,000 and visits to Mexico at 18,000. Average lengths of stay were indicated as: Britain, 28-29 days; Britain and Continental Europe (combined), 36 days; Continental Europe, 32-33 days; Bermuda, 11-12 days; the West Indies, 16-17 days; Mexico, 17-18 days; and Hawaii, 22-23 days.

In 1965, Canadians travelling overseas to visit friends and relatives made up between 39 and 40 p.c. of all overseas Canadian visitors; the proportions going to Britain and Continental Europe for that purpose were 65 p.c. and 61 p.c., respectively. Recreation was the main reason for 82 p.c. of all Canadian visits to Bermuda and the Caribbean and for 88 p.c. of the visits to Mexico. Canadians travelling overseas in 1965 were predominantly residents of Ontario, Quebec and British Columbia, accounting for 43 p.c., 28 p.c.

and 11 p.c., respectively, of the total. Purpose of trip showed some variation when comparing direct and indirect Canadian travel overseas. Recreation was the purpose of trip for 64 p.c. of the visitors returning via the United States and visiting friends and relatives was reported by 20 p.c. of those travelling indirectly. In comparison, 50 p.c. of the travellers returning directly from overseas reported their visits as mainly for recreation and 40 p.c. for visiting friends and relatives.

In 1965, about 132,900 overseas visitors came directly to Canada, an increase of close to 18 p.c. over 1964. Expenditures made by all overseas visitors including those entering via the United States, which amounted to \$87,000,000, were almost 21 p.c. higher. Visitors from Britain spent \$34,000,000 or 39 p.c. of the total, and those from other sterling areas \$9,000,000 or 10 p.c., from other European (OECD) countries \$27,000,000 or 31 p.c., and from other areas \$17,000,000 or 20 p.c. During the year, 56,500 visitors arrived directly from Britain, representing 42 p.c. of the total direct non-immigrant entries from overseas countries; those from other Commonwealth countries numbered 10,650 or 8 p.c.; from OECD countries 46,000 or 35 p.c.; and from other areas 19,790 or 15 p.c. Some 119,700 or 90 p.c. of the direct entries arrived by aircraft at Canadian international airports and 13,200 persons or 10 p.c. arrived by ship.

Based on questionnaire replies by overseas visitors to Canada in 1965, residents of Britain remained in Canada 35-36 days, those from other European OECD countries 37-38 days, those from the Commonwealth countries about 20-21 days and those from all other areas 12 days; 66.2 p.c. of all travellers from overseas came to Canada to visit friends and relatives compared with 66.5 p.c. in 1964; 16.9 p.c. reported business as their main purpose of trip compared with 17.8 p.c. in 1964; and those who came for recreational purposes made up 15 p.c. compared with 13.3 p.c. in the previous year. Purpose of trip showed considerable variation according to area of residence. More than 76 p.c. of the visitors from Britain came to visit friends and relatives but the proportion of arrivals for this reason from countries other than the Commonwealth and OECD countries was only 29 p.c.; the respective proportions for recreation were 10 p.c. and 43 p.c. The percentage of travel for business reasons ranged from about 12 p.c. of the visitors from Britain to over 25 p.c. from OECD countries.

SECTION 3. FEDERAL GOVERNMENT FINANCE.....	1035		
Subsection 1. DBS Statistics of Federal Government Finance.....	1035		

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in Section 1 of this Chapter and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 5 and 6. Section 4 gives information on the rapidly growing list of joint federal-provincial programs and on the extent of federal financial participation in such programs.

### Section 1.—Combined Statistics of Public Finance for All Governments

**Combined Revenue and Expenditure.**—Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1962 and 1963. This net basis has been prepared by deducting from revenue, and from the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

\* Except as otherwise indicated, revised in the Governments Division, Dominion Bureau of Statistics.

**Consolidated Debt.**—Table 3 gives details of combined debt of all governments for 1962 and 1963 with the aggregate debt of the federal, provincial and municipal governments; the inter-government debt is deducted to arrive at a consolidated government figure.

## Section 2.—Taxation in Canada\*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right to raise "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the province in order to the raising of a revenue for provincial purposes". Thus the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowers the provincial legislatures to make laws regarding "municipal institutions in the province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, from a practical standpoint, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". This conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption and places of business. The Federal Government levies direct taxes on income, on gifts and on the estates of deceased persons, and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

\* Revised (August 1966) in the Taxation Division, Department of Finance, under the direction of F. R. Irwin, Director of the Division, and by the provincial authorities concerned.

<sup>1</sup> Includes treasury bills having a term of two or more years.<sup>2</sup> Includes treasury bills having a term of less than two years.<sup>3</sup> Included in "Other direct liabilities".<sup>4</sup> Excludes contingent liability in respect of Federal Government guarantee of deposits maintained by chartered banks in the Bank of Canada and miscellaneous guarantees, the amounts of which were not finally determined at the close of the fiscal year.

The increasing use by both the federal and the provincial governments of their rights in the field of direct taxation in the 1930s resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of tax agreements were concluded between the federal and the provincial governments to promote the orderly imposition of direct taxes. The duration of each agreement was normally five years. Under the earlier agreements, the participating provinces undertook, in return for compensation, not to use or permit their municipalities to use certain of the direct taxes. Under the present arrangements, the federal income tax otherwise payable in all provinces and the estate tax otherwise payable in three provinces are abated by certain percentages to make room for provincial levies.

The current arrangement became operative on Apr. 1, 1962 and will run until Mar. 31, 1967. Under this arrangement there is a partial federal withdrawal from the field of direct taxation and a re-entry of all provinces into the vacated area. The federal personal income tax otherwise payable on income earned in a province and on income received by a resident of a province is reduced by the following percentages: 16 p.c. in 1962; 17 p.c. in 1963; 18 p.c. in 1964; 21 p.c. in 1965;\* and 24 p.c. in 1966.\* In 1965 and 1966, the federal tax abatements for income earned in Quebec or received by a resident of Quebec will be 44 p.c. and 47 p.c., respectively. The additional abatement in the case of Quebec is to allow that province to collect revenue to pay for certain programs that are paid for in whole or in part by the Federal Government in other provinces. The Federal Government also reduces its rate of corporation income tax on taxable income of corporations earned in the provinces. The reduction is 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. in Quebec. The additional 1 p.c. reduction in Quebec is to compensate for the additional tax levied by the province on corporation income to provide grants to universities. These provincial grants replace federal grants which in other provinces are paid to the universities by the Federal Government through the Canadian Universities Foundation. The Federal Government also abates the federal estate tax otherwise payable by 75 p.c. in respect of property situated in a province which levies its own death tax. Only Ontario, Quebec and British Columbia at present levy death taxes in the form of succession duties.†

These reductions in federal income tax and estate tax under the terms of the 1962-67 fiscal arrangements do not apply to the Yukon Territory or the Northwest Territories or to income earned outside Canada. The Yukon and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawal. The constitutional position of the provinces permits them unlimited use of direct taxes for the raising of revenue for provincial purposes. However, in all but four provinces (Ontario, Quebec, Manitoba and Saskatchewan) the provincial rates of income tax coincide with the amount of the federal abatement.

As part of the 1962-67 fiscal arrangements, the Federal Government has entered into tax collection agreements under which it collects the provincial personal income taxes for all provinces except Quebec and the provincial corporation income taxes for all provinces except Ontario and Quebec.

\* The original agreement provided for abatements of 19 p.c. in 1965 and 20 p.c. in 1966. However, following a federal-provincial conference in April 1964, the provinces were granted an additional two percentage points in 1965 and four percentage points in 1966.

† The original agreement was for a 50-p.c. abatement. However, at the conclusion of a federal-provincial conference in late 1963, it was increased to 75 p.c. in respect of deaths occurring after Mar. 31, 1964. Currently, only the estates of domiciliaries of British Columbia qualify for the full 75 p.c. abatement. Quebec and Ontario estates are temporarily eligible for only 50 p.c. because these two provinces have decided for the time being to take a payment from the Federal Government on account of the additional 25-p.c. abatement rather than to increase their succession duty rates.

**Subsection 1.—Federal Taxes****Individual Income Tax**

Every individual who is resident in Canada at any time during a year is liable for the payment of income tax for that year. Every non-resident individual who is employed or carries on business in Canada during a year is required to pay tax on the part of his income earned in Canada. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada, or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person. The extended meaning of residence also includes employees who go from Canada to work under certain international development assistance programs.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances), interest on borrowed money, reserves for doubtful debts, contributions to pension plans or deferred profit-sharing plans for his employees, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages, although there are exceptions such as travelling expenses of employees who have to travel as they perform their work, union dues, alimony payments and contributions to registered pension plans. Individuals may deduct, within limits, amounts set aside to provide a future income under registered retirement savings plans. Students attending universities, colleges, high schools, public schools or certain other certified educational institutions in Canada may deduct their tuition fees if they exceed \$25 per annum. Students in full-time attendance at universities outside Canada may deduct their tuition fees.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions. These exemptions and deductions are as follows: for single status, \$1,000; for married status, \$2,000; for dependent children eligible to receive family allowance,\* \$300 per child; for other dependants (as defined in the law), \$550 per dependant; where the taxpayer is 70 years of age or over (or between 65 and 70 years of age if not in receipt of an old age security pension), an additional \$500; where the

\* Family allowances are monthly welfare payments by the Federal Government to the parents or guardians of children under 16 years of age. The allowance is \$6 for each child under 10 years of age and \$8 for each child between the ages of 10 and 16. These allowances are not subject to income tax. Payments are also made in respect of children between the ages of 16 and 18 in full-time attendance at educational institutions; such payments of \$10 a month are called youth allowances. The right to deduct \$550 for a dependent child is not affected by the receipt of these youth allowances.

taxpayer is blind or confined for the whole of the taxation year to a bed or a wheelchair, an additional \$500; charitable donations, up to 10 p.c. of income; and medical expenses, in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations and medical expenses, an individual may claim a standard deduction of \$100.

As already stated, an individual who is resident in Canada for the whole year is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed only on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment income from Canada is taxed in a different way described on p. 1021.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year will be subject to income tax in Canada on only that part of his income for the year received while he is resident in Canada. In these circumstances, the deductions from income permitted for determining taxable income will be the amount that may reasonably be considered as applicable to the period during which he is resident in Canada.

A progressive schedule of rates is applied to taxable income, beginning at 11 p.c. on the first \$1,000 of taxable income and increasing to 80 p.c. on taxable income in excess of \$400,000. In addition, an old age security tax is levied on taxable income at the rate of 4 p.c. with a maximum of \$120\* reached at the level of \$3,000.

After calculating income tax using this progressive schedule of rates, an individual is allowed a deduction from his tax under four main headings. (1) *Dividend Tax Credit*—to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, Canadian resident individuals are allowed to deduct from their tax an amount equal to 20 p.c. of the net dividends they receive from Canadian taxable companies. (2) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax related to such income. (3) *Abatement under Federal-Provincial Fiscal Arrangements*—in 1966 the federal personal income tax otherwise payable on income of a resident of a province and on income earned in a province is reduced by 24 p.c., except in the case of income earned in Quebec or received by a resident of Quebec where it is 47 p.c. (see p. 1020). (4) *General Tax Reduction*—in 1966 all individuals may deduct from their tax an amount equal to the aggregate of 4 p.c. of their basic tax, not exceeding \$240, and 12 p.c. of their basic tax, not exceeding \$12. In 1967 and subsequent years, this deduction will be 20 p.c. of basic tax, not exceeding \$20. "Basic tax" is personal income tax, excluding the old age security tax, after deduction of the dividend tax credit but before the abatement for provincial income tax.

To a very large extent, individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return before Apr. 30 in the following year. Persons with more than 25 p.c. of their income from sources other than salary or wages must pay tax by quarterly instalments throughout the year and returns must be filed before Apr. 30 in the following calendar year.

The following statement shows what taxpayers pay (1966) at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of \$100 and no allowance has been made for the 20-p.c. dividend tax credit.

\* Raised in December 1966 to \$240, effective Jan. 1, 1967.

<i>Status</i>	<i>Income</i>	<i>Income Tax</i>	<i>Old Age Security Tax</i>

	100,000	49,563	120

The income taxes shown above are the combined federal and provincial taxes in all provinces where the provincial tax is the same as the federal abatement (i.e., in all provinces except Quebec, Manitoba and Saskatchewan). In Quebec the provincial tax approximates the federal abatement; in Manitoba and Saskatchewan the provincial tax exceeds the abatement by 5 percentage points.

### Corporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada. In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts, and interest on borrowed money. They may not deduct provincial income taxes other than provincial taxes on income derived from mining operations. (For this purpose "income from mining operations" is specially defined.)

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct over a period of years the actual cost of all depreciable property. The yearly deductions of normal capital cost allowances are computed on the diminishing balance principle. (Taxpayers engaged in farming and fishing may choose between this and the straight-line method.) Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset.

Accelerated depreciation is available to taxpayers in certain circumstances and for a limited period of time. Straight-line depreciation at a rate not exceeding 50 p.c. is granted in respect of new machinery and equipment that would otherwise fall in Class 8 of the Income Tax Regulations acquired in the period June 14, 1963 to Dec. 31, 1966 for use in manufacturing or processing businesses by individuals resident in Canada or by companies resident in Canada that have a degree of Canadian ownership. A company that has a

degree of Canadian ownership is one which throughout any 60-day period included in the 120-day period commencing 60 days before the first day of the year in question complies with the following conditions: (1) it was resident in Canada; (2) not less than 25 p.c. of its directors were residents of Canada; and (3) either (a) not less than 25 p.c. of its shares having full voting rights and shares representing not less than 25 p.c. of its equity share capital were owned by individuals resident in Canada or corporations controlled in Canada, or (b) a class or classes of its shares having full voting rights were listed on a Canadian stock exchange and no one non-resident person and no one corporation that did not comply with (a) above owned more than 75 p.c. of the shares having full voting rights, and equity shares of the corporation representing not less than 50 p.c. of the equity share capital of the corporation were listed on a Canadian stock exchange and no one non-resident person or no one corporation that did not comply with (a) above owned equity shares representing more than 75 p.c. of its equity share capital. For new manufacturing or processing businesses in designated areas of slower growth there is no requirement that they have a degree of Canadian ownership to qualify for this 50-p.c. straight-line depreciation. Moreover, the period during which their expenditures on eligible assets qualify for this accelerated write-off extends from Dec. 5, 1963 to Mar. 31, 1967. Depreciation at the accelerated rate of 20 p.c. on a straight-line basis is also available in respect of new buildings acquired in designated areas of slower growth in the period commencing on Dec. 5, 1963 and ending on Mar. 31, 1967. Accelerated depreciation is also allowed in respect of new buildings or other structures for grain storage acquired in the period May 1, 1965 to Dec. 31, 1966\* (full write-off in four years) and in respect of property acquired in the period Apr. 27, 1965 to Dec. 31, 1967 to prevent water pollution (full write-off in two years).

The 1966 Budget announced the temporary reductions of the capital cost allowances that could otherwise be claimed for certain classes of assets acquired during the period Mar. 30, 1966 to Oct. 1, 1967. The reductions will operate by recognizing in the taxation year in which the property is acquired and in the next two taxation years part only of the cost for capital cost allowance purposes. The principal classes of assets affected include most kinds of buildings and machinery and equipment with the exception of heavy construction equipment and automotive equipment, pipelines and the generating and distributing equipment of public utilities. Assets eligible for accelerated depreciation under programs to promote the acquisition of "degree of Canadian ownership" status or the development of "designated areas" are not affected by this curtailment of normal capital cost allowances.

Expenditures on scientific research by corporations qualify for special tax treatment. Generally speaking, all expenditures on scientific research related to the business of the taxpayer may be written off for tax purposes in the year when incurred. In addition, corporations are permitted to deduct, in computing income for tax purposes, 150 p.c. of their increased expenditures on scientific research in Canada. This concession is available until the end of the 1966 taxation year.

Taxpayers operating mines, oil wells and gas wells are allowed a depletion allowance, usually computed as a percentage of profits derived from mineral, oil or gas production, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer and the deduction of exploration and drilling expenses. Taxpayers operating timber limits receive an annual allowance sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year. When the amount invested in the limit has been recovered, no further allowance is given.

\* Authority has been granted to extend in certain circumstances the date by which these buildings or structures must be completed.

In computing taxable income, corporations may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least 25 p.c. stock ownership. Business losses may be carried back one year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 10 p.c. of their income.

The general rates of tax on corporate taxable income are 18 p.c. on the first \$35,000 of taxable income and 47 p.c. on taxable income in excess of \$35,000. Corporations deriving more than one half of their gross revenue from the sale of electric energy, gas or steam pay tax on their taxable income from such sources at the rate of 18 p.c. on the first \$35,000 of taxable income plus 45 p.c. on taxable income in excess of \$35,000. Corporations that qualify as investment companies pay a tax of 18 p.c. on their taxable income. In addition to these rates, all corporations pay an old age security tax of 3 p.c. of taxable income, bringing their rates up to 21 p.c. and 50 p.c. (21 p.c. and 48 p.c. for the public utility companies and 21 p.c. for investment companies).

In calculating the amount of their income tax, corporations are allowed a deduction from tax under three headings. (1) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income. (2) *Abatement under Federal-Provincial Fiscal Arrangements*—corporations may deduct from their federal tax otherwise payable a tax abatement equal to a fixed percentage of their taxable income attributable to operations in a Canadian province. This abatement is to make room for the provincial income tax levied by each Canadian province. The amount of the abatement is 9 p.c. of taxable income attributable to operations in any province except Quebec and 10 p.c. of taxable income attributable to operations in Quebec. (3) *Provincial Logging Tax*—corporations may deduct from their federal tax otherwise payable an amount equal to two thirds of a provincial tax on income from logging operations not exceeding two thirds of 10 p.c. of the corporation's income from logging operations in the province. (At present only Ontario, Quebec and British Columbia impose logging taxes—see p. 1032.)

Income from the operation of a new mine, including wells for extracting potash by the solution method, is exempt from income tax during the first 36 months of commercial production. Income from manufacturing or processing businesses established in certain designated areas of slower growth during the period Dec. 5, 1963 to Mar. 31, 1967 is eligible for a three-year exemption from income tax.\*

Corporations are required to pay their tax (combined income and old age security tax) in monthly instalments but the period during which they pay tax for a taxation year does not coincide with that taxation year. In each of the last eight months of their taxation year and in the following two months they pay one twelfth of their estimated tax for the year (such estimate is based on the taxable income of the previous year or the estimated taxable income of the year in progress). In each of the following two months, they pay one half of the estimated balance of the tax computed by reference to the income of the taxation year. In the sixth month following the end of their taxation year, the final return must be filed.

### Special Refundable Tax on the Cash Profits of Corporations†

The 1966 Budget announced a temporary tax of 5 p.c. on the cash profits of corporations payable monthly over an 18-month period commencing in May 1966. The amounts collected under the measure will be repaid with interest at 5 p.c. after an interval of 18 to

\* This concession for new manufacturing or processing businesses is also available to individuals.

† This tax is also payable on business and rental income of trusts.

36 months from receipt. The monthly payments are to be made on an estimated base computed by reference to the present or immediately preceding taxation year, subject to adjustment at the end of the year.

The base for the tax is the taxable income of the corporation less federal and provincial taxes payable thereon, less a basic exemption of \$30,000, less principal payments due and made on debt of the corporation having original term of three years or more and having been contracted for under written arrangements in existence on Mar. 29, 1966 (this deduction is subject to certain limits), plus certain amounts that were deducted in arriving at taxable income but that do not deplete the cash position of the corporation (such as capital cost allowances and depletion).

### **Taxation of Non-residents**

A non-resident is liable for payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes (1) maintaining a permanent establishment in Canada, (2) processing goods even partially in Canada, and (3) entering into contracts in Canada. The taxable income of a non-resident individual thus derived is taxed under the same schedule of rates as Canadian resident individuals, and non-resident corporations deriving income from carrying on business in Canada are taxed on their taxable income attributable to operations in Canada at the same rates as Canadian resident corporations. (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in Canada by residents or employees of these countries. They also prohibit Canada taxing profits of a non-resident enterprise unless that enterprise has a permanent establishment in Canada.)

Furthermore, the Income Tax Act imposes a tax at the rate of 15 p.c. on certain forms of income going from Canada to non-resident persons. It applies to interest (other than interest on government bonds issued after Apr. 15, 1966), dividends, rentals, royalties, income from a trust or estate and alimony, and applies whether the income goes to non-resident individuals or to corporations. The rate is reduced to 10 p.c. in the case of dividends paid by a company that has a degree of Canadian ownership and is also 10 p.c. on royalties from motion picture films. This non-resident tax is withheld at the source by the Canadian payer. Non-residents who receive only this kind of income from Canada do not file returns in Canada.

Profits earned in Canada by a non-resident corporation carrying on business through a branch or permanent establishment in Canada are taxed at the regular rates of corporation income tax and are also subject to an additional tax of 15 p.c. This additional tax is imposed on profits attributable to the branch after deducting therefrom Canadian federal and provincial income taxes and an allowance in respect of the net increase in capital investment in property in Canada.

### **Gift Tax**

The Income Tax Act levies a tax upon gifts. The rates range from 10 p.c. on an aggregate taxable value of \$5,000 or under to 28 p.c. on an aggregate taxable value of over \$1,000,000. Exemptions include complete exemption of gifts of \$1,000 or less per donee and a general deduction of \$4,000 from aggregate taxable value of gifts made in the year.

### **Estate Tax**

This tax applies to property passing, or deemed to pass, at death. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary, the value of the whole estate is first determined. Once the aggregate value of the estate has been determined, estate debts and certain expenses may be deducted. From the resulting "aggregate net value" there

may be deducted the amount of a basic exemption, which is increased where the deceased leaves a widow or dependent child, and also the amount of any charitable bequests to charitable organizations in Canada. After these deductions the amount left is the "aggregate taxable value" to which is applied the tax rates. From the tax so calculated may be deducted (1) a tax abatement in respect of property situated in a province that levies a succession duty, (2) a credit for gift tax paid on gifts made within three years of death (the value of which must be included in the aggregate net value of the estate), and (3) a credit for foreign taxes.

No estate valued at less than \$50,000 is subject to estate tax. This \$50,000 is not an exemption but the starting point for tax. The estate tax must not reduce the value of an estate after tax to less than \$50,000. The basic deductible exemption which applies to all estates of Canadian domiciliaries is \$40,000. This basic exemption of \$40,000 is increased to \$60,000 in respect of a deceased male survived by a spouse, or in respect of a deceased female survived by an incapacitated spouse and a dependent child. In both cases, there is an additional exemption of \$10,000 for each surviving dependent child. Finally, the basic exemption of \$40,000 is increased by \$15,000 for every surviving dependent child made an orphan by the death of the deceased.

The tax on the estates of Canadian domiciliaries is calculated by applying a graduated scale of rates. For an aggregate taxable value of \$5,000, or less, the rate is 10 p.c. For an aggregate taxable value of \$100,000, the tax is \$19,000 and anything between \$100,000 and \$150,000 is taxed at 24 p.c. At \$2,000,000 of taxable value, the tax is \$816,500 and the excess over \$2,000,000 is chargeable at the highest rate of 54 p.c.

The property situated in Canada of a deceased person not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision that exempts all such property of less than \$5,000 value and also provides that the tax must not reduce the value of the property to less than \$5,000. (The Estate Tax Convention between Canada and the United States increases this figure to \$15,000.) As stated previously, there is an abatement from federal estate taxes otherwise payable, in respect of property situated in a province that levies succession duties. Where property is subject to provincial duties, the 15-p.c. tax is abated by 75 p.c. (At present this abatement is only 50 p.c. in Ontario and Quebec.\*)

### Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. Both the sales tax and the special excise taxes are levied on goods imported into Canada and on goods produced in Canada. They are not levied on goods exported. The sales tax, which is at the rate of 8 p.c.,<sup>†</sup> is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. For alcoholic beverages and tobacco products, the sale price for purposes of the sales tax includes excise duties levied under the Excise Act (see p. 1028). An old age security tax of 3 p.c. is levied on the same basis as the 8-p.c.<sup>†</sup> tax, bringing the total sales tax to 11 p.c.<sup>†</sup>

Many classes of goods are exempt from sales tax. Foodstuffs, electricity and fuels for lighting or heating are generally exempt as well as articles and materials used by public hospitals. The products of farms, forests, mines and fisheries are, to a large extent, exempt as well as most equipment used in farming and fishing. Materials consumed or expended in production are not taxed. Also, a variety of items are exempt from sales tax when purchased by municipalities. These and other exemptions are set forth in schedules to the Excise Tax Act.

The 1966 Budget announced that machinery and equipment used directly in the manufacture or production of goods would be relieved of tax over a two-year period. Effective Mar. 30, 1966, full exemption is extended to dies, moulds, jigs, fixtures and the cutting or

\* See footnote†, p. 1020.

† Raised in December 1966 to 9 p.c., effective Jan. 1, 1967, bringing total sales tax to 12 p.c.

shaping parts of machines. On Apr. 1, 1967, a comprehensive list of other production machinery and equipment will become subject to a reduced rate of 6 p.c. and on Apr. 1, 1968, the same goods will be granted full exemption from the levy.

A number of articles are subject to special excise taxes in addition to the sales tax. Where these are ad valorem taxes they are levied on exactly the same price or duty-paid value as the general sales tax. Those levied at present are as follows:—

Cigarettes.....	2½ cents per 5 cigs.
Cigars.....	15 p.c. ad valorem
Jewellery, including clocks, watches, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink.....	10 p.c. ad valorem
Lighters.....	10 cents per lighter
Playing cards.....	20 cents per pack
Radios.....	the greater of \$2 per radio or 15 p.c. ad valorem
Phonographs and television sets.....	15 p.c. ad valorem
Tubes for radios, phonographs and television sets, not including television picture tubes, priced under \$5 per tube.....	10 cents per tube
Television set picture tubes.....	15 p.c. ad valorem
Slot machines—coin, disc or token-operated games or amusement devices..	10 p.c. ad valorem
Matches.....	10 p.c. ad valorem
Tobacco—pipe tobacco, cut tobacco and snuff.....	80 cents per lb.
Tobacco pipes, cigar and cigarette holders and cigarette rolling devices....	10 p.c. ad valorem
Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc.....	10 p.c. ad valorem
Wines—*	
Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume.....	25 cents per gal.
Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit.....	50 cents per gal.
Sparkling wines.....	\$2.50 per gal.
Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or foreign companies.....	10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.)

All the foregoing items, except the last, are also subject to the general sales tax of 8 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes, referred to as excise duties (see below).

### Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages and tobacco products produced in Canada. The customs tariff on such products imported into Canada includes a levy to correspond with the duties levied on domestic production. These duties are not levied on goods exported.

*Spirits.*—The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and in industry, or for fuel, light or power, or for any mechanical purpose. The various duties are as follows:—

On every gallon of the strength of proof distilled in Canada.....	\$13.00
On every gallon of the strength of proof used in the manufacture of—	
Medicines, extracts, pharmaceutical preparations, etc.....	\$1.50 per gal.
Approved chemical compositions.....	15 cents per gal.
Spirits sold to a druggist and used in the preparation of prescriptions...	\$1.50 per gal.
Imported spirits when taken into a bonded manufactory in addition to other duties.....	30 cents per gal.

\* Applicable only to wines manufactured in Canada. The customs tariff on wines includes a levy to correspond with these taxes on domestic production.

*Canadian Brandy.*—Canadian brandy, a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials, is subject to a duty of \$11 per gallon.

*Beer.*—All beer or other malt liquor is subject to a duty of 38 cents per gallon.

*Tobacco, Cigars and Cigarettes.*—The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes already described. The rates are as follows:—

On manufactured tobacco of all descriptions, except cigarettes.....	35 cents per lb.
Cigarettes weighing not more than 3 lb. per thousand (nearly all of the cigarettes used in Canada are of this type).....	\$4.00 per thousand
Cigarettes weighing more than 3 lb. per thousand.....	\$5.00 per thousand
Cigars.....	\$2.00 per thousand
Canadian raw leaf tobacco when sold for consumption.....	10 cents per lb.

### Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:—

Cigarettes.....	\$9.00 per thousand (or 18 cents per pack of 20 cigarettes) plus the 11-p.c. sales tax on the manufacturer's sale price
Manufactured tobacco.....	\$1.15 per lb. plus the 11-p.c. sales tax on the manufacturer's sale price
Cigars.....	\$2.00 per thousand plus the 15-p.c. special excise tax and the 11-p.c. sales tax on the manufacturer's sale price.

### Customs Duties\*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, which once were the chief source of revenue for the country, have declined in importance as a source of revenue to the point where they now provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, the tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly to Canada from countries within the Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Preferential or Most-Favoured-Nation treatment. Few countries are in this category and in terms of trade coverage are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates that apply on any particular item may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

\* See also pp. 1000-1010.

### Subsection 2.—Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces levy a tax on the income of individuals and corporations resident within their boundaries or deriving income from activities or operations carried out therein. Only the Provinces of Ontario and Quebec impose special taxes on corporations in addition to income tax and only the Provinces of Ontario, Quebec and British Columbia impose a tax on property passing at death; the remaining provinces receive payment from the Federal Government of their 75-p.c. share of estate tax levies. Under the terms of the existing Federal-Provincial Fiscal Arrangements, the Federal Government makes "equalization payments" to some provinces in recognition of the fact that the actual tax revenue from the fields of income tax, death duties and natural resource revenue in those provinces, measured on a per capita basis, is lower than the average per capita yield from these taxes in the two provinces where they produce the highest yield. However, resource revenues are treated as a negative adjustment; for those provinces that have above-average per capita revenues from resource revenues, a deduction is made in the equalization payment equal to 50 p.c. of the excess above the national average. For some provinces the equalization payments constitute a very important source of revenue.

Some of the more important provincial levies are reviewed briefly on the following pages.

#### Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn income therein. In nine of the ten provinces, these taxes are computed as a percentage of federal "basic tax". As previously explained, "basic tax" is federal income tax (excluding old age security tax) otherwise payable at full federal rates before the abatement under the Federal-Provincial Fiscal Arrangements and before allowance for the federal tax reduction passed in 1966. These provincial taxes are collected by the Federal Government on behalf of these provinces. In Quebec, provincial income tax is levied at graduated rates that progress from 5.2 p.c. on the first \$1,000 of taxable income to a maximum of 37.6 p.c. on the excess over \$400,000. The determination of taxable income for Quebec tax is based on exemptions and deductions similar to those for federal tax. The Province of Quebec collects its own tax.

The percentages that provincial income tax liability is of federal "basic tax" for 1966 are: Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia each 24 p.c., Quebec approximately 47 p.c., and Manitoba and Saskatchewan each 29 p.c.

#### Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec the provincial tax imposed on taxable income in the province is determined on the same basis as for federal income tax. In Ontario and Quebec the determination of taxable profits for purposes of provincial tax follows closely the federal rules. The rate of tax in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia is 9 p.c. of corporate taxable income. The rate that applies in Manitoba and Saskatchewan is 10 p.c., in Ontario 11 p.c. and in Quebec 12 p.c.

Four of the ten provinces levy corporate income taxes at rates in excess of the abatement allowed by the Federal Government. This abatement is equal to 9 p.c. of corporate profits except in Quebec where it is 10 p.c. (see p. 1020). All provinces except Ontario and Quebec have signed agreements for the collection of their income taxes by the Federal Government.

#### Taxes on Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over

alcoholic beverages. The provincial mark-up over the manufacturer's price is the effective means of revenue. Beer and wine may be sold by retailers or government stores depending on the province but in all cases they contribute to provincial revenues.\* The Province of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at retail, collected under authority of the Health Tax Act.

Newfoundland imposes a tax on tobacco sold at retail of one quarter of one cent per cigarette purchased; from one to five cents per cigar, depending on price; and one cent per half ounce or less of other tobacco. Prince Edward Island's tax on tobacco sold at retail is one fifth of one cent per cigarette purchased; from one to three cents per cigar, depending on price; and 10 p.c. of the retail price of all other tobacco purchased. Saskatchewan's tax on retail tobacco sales is one fifth of one cent per cigarette purchased; from one to five cents per cigar, depending on price; and one cent on every half ounce of other tobacco; the average rate of the tobacco tax is 10 p.c. Specific sales taxes on tobacco products are also levied in New Brunswick, Quebec, Manitoba, and Ontario.

### Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. Eight provinces now levy this type of tax at rates varying from 3 p.c. to 6 p.c. These provinces are Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia. These direct levies apply to tangible taxable commodities sold, with varying exemptions, for consumption in the province and to a few selected services, for example, to local telephone services in all provinces except Saskatchewan and to telecommunications and hotel and motel charges in Quebec.

### Amusement Taxes

Each of the provinces with the exception of Alberta, Saskatchewan, British Columbia and Quebec has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 15 p.c.

### Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 12 cents per gallon in Alberta to 19 cents in Nova Scotia and Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:—

	Gasoline	Diesel Fuel		Gasoline	Diesel Fuel
	cts.	cts.		cts.	cts.
Newfoundland.....	19	19	Ontario†.....	16	22
Prince Edward Island‡	18	18	Manitoba.....	17	20
Nova Scotia.....	19	27	Saskatchewan....	15	18½
New Brunswick.....	18	23	Alberta.....	12	14½
Quebec.....	16	22	British Columbia	13	15

The British Columbia net tax rate (after refund) on gasoline used in logging trucks off highway, in power units of motor vehicles for stationary industrial use, and in vehicles used by amputees, paraplegics and certain war amputees is 1 cent per gallon. Gasoline coloured purple for certain off-highway use (including marine) and motor fuels, being any fuel except gasoline not consumed on provincial highways, is also taxed at 1 cent per gallon. Fuel oil used for heating purposes is taxed at ½ cent per gallon.

\* The provincial mark-up over the manufacturer's price is not considered a "tax" in DBS financial statistics, but forms part of the "profits of government business enterprises".

† Gasoline and diesel fuel used by primary producers—farmers, fishermen, manufacturers and processors—is exempt from tax as is also gasoline and motor fuel used by owners or operators of registered pleasure craft.

‡ Some relief from taxation is given where gasoline or fuel oil is used for farming, manufacturing, commercial fishing and other off-highway purposes.

§ Generally, fuel oil used for agricultural and industrial purposes is exempt from tax.

### Motor Vehicle Licences and Fees

Each province levies a fee on the annual registration of motor vehicles, which is compulsory. Upon registration a vehicle is issued with licence plates. The rates of fee vary from province to province and, in the case of passenger cars, may be assessed on the weight of the vehicle, the wheel base, the year of manufacture, the number of cylinders of the engine, or at a flat rate. The fees for commercial motor vehicles and trailers are based on the gross weight for which the vehicle is registered, i.e., the weight of the vehicle empty plus the load it is permitted to carry. Every operator or driver of a motor vehicle is required to obtain a driver's licence and pay a fee therefor. The licences are valid for periods of from one to five years and the fees vary from \$1 to \$6 a year.

### Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces except Prince Edward Island and Alberta impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan, Manitoba and Ontario impose a tax on the assessed value of minerals or a flat rate per acre of mining property. Manitoba imposes rates of from 6 p.c. to 11 p.c. on mining royalties.

### Tax on Logging Operations

The Provinces of Ontario, Quebec and British Columbia levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In Quebec and Ontario the rate is 10 p.c. on net income where in excess of \$10,000 and in British Columbia the tax is 10 p.c. on net income where in excess of \$25,000. In Ontario and Quebec one third and in British Columbia 18 p.c. of the tax is allowed as a deduction from provincial corporate income tax or, in Quebec, from the provincial income tax, and the remainder is deductible from federal income tax.

### Business Taxes

The Province of Quebec imposes a tax of one tenth of 1 p.c. on paid-up capital of corporations and Ontario levies a similar tax at the rate of one twentieth of 1 p.c.

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec, the tax is generally \$50; it is reduced to \$25 when the paid-up capital is less than \$25,000; and in the case of loan companies, the tax is \$100 when capital paid up is \$100,000 or more. In Ontario, the tax for each permanent establishment is the lesser of \$50 or one twentieth of 1 p.c. of paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than \$20. Ontario also imposes an office tax of \$50 on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets. A corporation that does not maintain a permanent establishment in Ontario but is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation in the province must pay an office tax of \$50 or one tenth of 1 p.c. of the total amount of its gross Ontario sales or revenue if less than \$50,000, subject to a minimum office tax of \$5.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car and dining-car companies. In Ontario, these special taxes (except the tax payable by insurance corporations calculated on gross premiums) and the capital and place-of-business taxes are payable only to the extent that they exceed the corporate income tax otherwise payable.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

## Land Transfer Taxes

The Provinces of Alberta and Ontario levy a tax based on the value of the consideration at which ownership of land is transferred. In Ontario, two fifths of 1 p.c. tax is imposed for land transfer that is \$25,000 or over; one fifth of 1 p.c. under \$25,000. Other provinces do not have a land transfer tax but most have a scale of charges or fees imposed upon registration of transfer of land. These fees are not regarded as taxes since a service is rendered or an assurance given with each charge.

## Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in each province are:—

Shares sold, transferred or assigned valued at—

Under \$1.....	1/10th of 1 p.c. of value
\$ 1 to \$ 5.....	$\frac{1}{2}$ cent per share
\$ 5 to \$ 25.....	1 cent per share
\$25 to \$ 50.....	2 cents per share
\$50 to \$ 75.....	3 cents per share
\$75 to \$150.....	4 cents per share
Over \$150.....	4 cents per share plus 1/10th of 1 p.c. of value in excess of \$150
Bonds and debentures.....	3 cents for every \$100 or fraction thereof of par value.

## Tax on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province.

## Succession Duties

Only the Provinces of Ontario, Quebec and British Columbia levy succession duties. These duties are a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary. The three provinces impose succession duties on all property situated in the province belonging to the deceased and passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property wherever situated of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are generally governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax increases as the degree of relationship between the deceased and his successor becomes more remote.

Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta, while not imposing succession duties, each receives 75 p.c. of Federal Government estate tax levies on property situated within its borders.

## Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved, forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at  $1\frac{1}{2}$  p.c. In unorganized (non-municipal) areas, Ontario levies a property tax of  $1\frac{1}{2}$  p.c. of assessed value; the minimum annual tax in respect of any land is \$6. New Brunswick levies a tax of \$1.50 per \$100 market value assessment on all land and buildings in the province and a similar tax on business occupancy, to finance education, health, welfare and justice services. Nova Scotia also imposes property taxes of limited application.

### Race Track Taxes

Ontario levies a tax on operators of race meets and upon holders of winning tickets issued under the pari-mutuel system. The tax on race meeting operators is imposed at the rate of \$1 for each day the meet is conducted. Holders of winning tickets must pay a tax equal to 6 p.c. upon the amount which would be payable to them if no percentage were deducted by the person holding the race meeting. A number of other provinces levy a pari-mutuel tax on money bet in the province on horse races: in Newfoundland the rate is 11 p.c., in Prince Edward Island 10½ p.c., in New Brunswick 5½ p.c., in Manitoba 10 p.c., in Alberta and Saskatchewan 5 p.c., and in Quebec 7 p.c. on ordinary pools and 9 p.c. on special pools (quinella and daily-double). In British Columbia the tax is 12 p.c. but the province returns 2½ p.c. of money bet to horsemen and track operators for purses, etc.

### Subsection 3.—Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value or, as in Nova Scotia and throughout most of New Brunswick, of the actual market value. The revenues from such taxes are used generally to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services; in New Brunswick the municipal levy is used only for property service. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied, depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan, municipalities are empowered to levy an amusement tax on the admission of persons to places of entertainment, although the amusement tax is generally a provincial preserve (see p. 1031). Electricity and gas are taxed at the consumer level in some western municipalities and coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal and certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. Three bases of assessment are in use—a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax but others charge both a licence fee and a business tax.

### Subsection 4.—Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

### Unemployment Insurance

For the past twenty-six years, a national program of unemployment insurance has been in operation in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contributions, together with statistics on the operation of the program, are given at pp. 769-771.

## Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 772-773.

## Hospital Insurance

A federal-provincial hospital insurance plan has been adopted by each of the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the remainder of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 281-284.

## Section 3.—Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Canada Gazette*. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The *Canada Gazette* presentation is included because there is interest in and use for information on this basis.

### Subsection 1.—DBS Statistics of Federal Government Finance

**Revenue and Expenditure.**—Table 4 shows details of net general revenue of the Federal Government for the years ended Mar. 31, 1964 and 1965.

## Subsection 2.—Public Accounts Statistics of Federal Government Finance

The figures of Tables 9 and 11, giving details of revenue and of assets and liabilities, respectively, of the Federal Government for the fiscal years ended Mar. 31, 1964-66, and the figures of Table 10, giving details of Federal Government expenditure for the years ended Mar. 31, 1965 and 1966, are taken from the *Canada Gazette*. Because of reorganization in Federal Government Departments and the necessary changes in the *Public Accounts*, it is not possible to present data for previous years on a comparable basis. It should be noted that these figures relate, of course, to departments and agencies as they were organized before the passing of the Government Organization Act, which received Royal Assent on June 16, 1966.

### 9.—Revenue of the Federal Government, Years Ended Mar. 31, 1964-66

Revenue	1964	1965	1966
	\$	\$	\$
<b>Tax Revenue—</b>

**Guaranteed Debt.**—In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board, to farmers and to university students and of guarantees under the Export Credits Insurance Act.

<sup>1</sup> In addition, the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1964 amounted to approximately \$14,629,600. Against this amount was a reserve of \$3,901,429 held by Central Mortgage and Housing Corporation.

<sup>2</sup> These contingent liabilities are expressed in Canadian dollars; they are payable solely in United States dollars and are converted on the basis of \$1 U.S. = \$1.08108 Canadian.

<sup>3</sup> As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders at Dec. 31, 1964.

<sup>4</sup> Includes contingent liability in respect of payments to non-participating provinces.

Table 13 summarizes the national debt position during the period 1957-66 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and

information on new security issues of the Federal Government may be found in the *Public Accounts of Canada*. They are summarized by standard classification in DBS publication *Federal Government Finance, Revenue and Expenditure* (Catalogue No. 68-211).

### Subsection 3.—Revenue from Taxation

The incidence of Federal Government taxation is dealt with in Section 2. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the *Public Accounts of Canada* and are not included here.

#### Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and as a single cheque from one employer may frequently cover the tax payment of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

### 14.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1957-66

NOTE.—Comparable figures from 1917 are given in the corresponding table of previous Year Books beginning with the 1947 edition.

## Succession Duties and Estate Taxes

A history of succession duties is given in the 1956 Year Book, pp. 1064-1068. From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec among the provinces levied succession duties, the other provinces having leased this field to the Federal Government under the terms of the 1947, 1952 and 1957 tax agreements (see p. 1020). However, British Columbia re-entered the field, effective for all deaths occurring on or after Apr. 1, 1963. The incidence of the estate tax is discussed at pp. 1026-1027.

Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1965 amounted to \$88,625,641. In the same year, Quebec's revenue from succession duties amounted to \$35,426,000 and Ontario's revenue from succession duties to \$48,682,000.

## Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1964 to 1966 in Table 21.

### 21.—Excise Taxes Collected, by Commodity, Years Ended Mar. 31, 1964-66

<sup>1</sup> Excludes tax credited to the old age security fund.

<sup>2</sup> Net after deduction of refunds and drawbacks.

## Excise Duties

Gross excise duties collected are given in the following statement for the years ended Mar. 31, 1964 and 1965. The totals do not agree with net excise duties as shown in Table 9 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

## Section 4.—Federal-Provincial Conditional Grants and Shared-Cost Programs\*

During the past decade there has been a rapid increase in federal expenditures on joint federal-provincial programs. These programs take three forms: (1) the Federal Government contributes financial assistance to a program administered by a province; (2) the federal and provincial governments each assume the sole responsibility for the construction, administration and financing of separate aspects of a joint project; or (3) the province contributes financially to a joint program administered by the Federal Government.

The first category of joint programs is by far the most common and such programs are commonly called conditional grant programs. They are characterized by the Federal Government agreeing to make money available to a province on certain conditions, such conditions always specifying the field, service or project to which the money must be applied. In addition, the province may be required to make a financial contribution to the program, to provide certain facilities, and to maintain the program at certain specified standards. The various programs in the welfare field were good examples of conditional grant programs. Under the old age assistance program, the Federal Government undertook to share with a province the cost of assistance to persons who had attained the age of 65 years to the extent of 50 p.c. of a monthly assistance allowance of \$75; the recipient, besides being above a certain age, must have been a resident of Canada for 10 years and his income, including the assistance, must not be in excess of \$1,260 a year if unmarried, \$2,220 if married, and \$2,580 if married to a blind spouse. The provinces are entrusted with the administration of the program and are required to bear the administrative costs as well as one half of the monthly allowance.

Although the old age assistance program, with its specification of the standards for eligibility, the level of the allowance and the federal share of the joint costs, is characteristic of conditional grant programs, there are some in which the conditions are nominal. For example, under the employment assistance program the Federal Government undertook to share one half of the cost of relief paid to social assistance recipients, the scale and conditions of the assistance to be determined by the provinces. In general, it may be said that the old age assistance program conformed to the traditional pattern of conditional

\* Prepared (December 1966) in the Federal-Provincial Relations Division, Department of Finance, Ottawa.

Federal-Provincial Relations Division, Department of Finance, *Federal-Provincial Conditional Grant and Shared-Cost Programmes, 1962*, Ottawa, Queen's Printer, October 1963, \$3 (Catalogue No. F2-2563). Appendix to House of Commons Debates of Sept. 10, 1964. Statutes of Canada 1964-65, c. 54.

grants, whereas the unemployment assistance program marked a newer approach in which flexibility and adaptability to local circumstances was allowed to modify insistence on a national uniform standard.

The federal transfers to the provinces in respect of the conditional grant programs increased from \$75,000,000 in the year ended Mar. 31, 1954, to an estimated \$1,109,107,000 in 1965-66. The increase was attributable largely to the introduction of the unemployment assistance program in 1955 and the hospital insurance and diagnostic services program in 1958, to the increase in the level of old age assistance, disabled persons' and blind persons' allowances, and to the enlargement and reorientation of the vocational and technical training program (see pp. 347-348). In 1965-66, federal contributions to the programs in respect of the unemployment assistance and the hospital insurance and diagnostic services programs were estimated at \$123,983,000 and \$492,061,000, respectively.

Joint programs in the second category—those in which the federal and provincial governments accept sole responsibility for portions of a total project—are not numerous and are generally of a public works type. The irrigation projects carried out jointly by the Prairie Farm Rehabilitation Administration and the Province of Alberta on the St. Mary's and Bow Rivers in southern Alberta are of this nature, as is the bridge recently built between Ottawa in Ontario and Hull in Quebec. In the St. Mary's irrigation project, the Federal Government has undertaken the responsibility for the construction of all main reservoirs, large dams and connecting works, and Alberta has assumed responsibility for the construction of the distribution system and the development and colonization of the new irrigable areas.

Joint programs in the third category are also few in number and the sums of money involved are seldom large. The Fraser River Board and the South Saskatchewan River Dam are two examples. The Fraser River Board was established by Canada and British Columbia in 1955 to investigate flood control and hydro-electric power generation on the Fraser River. Canada undertook to pay the costs of the Board in the first instance with British Columbia subsequently reimbursing Canada for half of the expenditures of the Board. In the case of the South Saskatchewan River project, Saskatchewan is to reimburse Canada for 25 p.c. (up to a maximum of \$25,000,000) of the federal expenditure on the dam and reservoir. In the year ended Mar. 31, 1965, British Columbia's share of the joint expenditures on the Fraser River Board amounted to \$7,741, and Saskatchewan's share of the expenditures on the South Saskatchewan River project was \$4,288,543.

The increasing number and extent of conditional grant and shared-cost programs has occasioned some provincial criticisms and misgivings. It has been argued that the preponderant occupancy of the direct tax field in the postwar years by the Federal Government encouraged the growth of such programs as the provinces were denied the revenues that would have enabled them to provide equivalent programs themselves. At the 1964 Federal-Provincial Conference, the Province of Quebec proposed that a province be given the option to assume full administrative and financial responsibility for certain joint programs on the Federal Government making available to that province the necessary additional tax room. The "contracting-out" proposal was referred to a federal-provincial committee of officials for consideration. As a consequence of their consideration, the Prime Minister of Canada, in a letter to the provincial Premiers dated Aug. 15, 1964, proposed a temporary measure permitting a province to contract out of certain programs for an interim period pending the development of more permanent arrangements. Parliament approved the necessary legislation—the Established Programs (Interim Arrangements) Act—in April 1965. Under the Act the Government of Canada was authorized to enter into agreements with any province that wished to contract out of certain conditional grant programs. The nature and number of programs were itemized in the schedules to the Act.

Schedule I listed the major conditional grant programs of a continuing nature which a province might contract out of, and Schedule II listed smaller and more transient programs. The Schedule I programs were: (1) hospital insurance; (2) old age assistance, blind persons' allowances, disabled persons' allowances, and the welfare portion of unemployment assistance; (3) the technical and vocational training programs for youths who were not yet members of the labour force; and (4) the health grant program, except those elements that involved research and demonstration. The Schedule II programs: (1) agricultural lime assistance; (2) the forestry programs; (3) hospital construction grants; (4) campgrounds and picnic areas; and (5) the roads to resources program.

If a province wished to contract out of a Schedule I program, it had to enter into a supplemental agreement in which it undertook to assume full responsibility for the administration and financing of the program. The Federal Government undertook to ensure that the province received revenue equivalent to the fiscal burden it assumed. The Federal Government undertook to (a) abate by a specified percentage the federal individual income tax on the income of residents of the province; (b) pay an associated equalization; and (c) make an operating cost adjustment. The operating cost adjustment payment or recovery was to ensure that a province did not suffer or benefit financially through assuming the financing of the federal share of the former joint program. Because of their smaller size and lack of continuity, the compensation associated with contracting-out of a Schedule II program did not provide for federal tax abatement or associated equalization payments. The compensation for these programs was to be paid directly to the province by the federal Minister of Finance.

The freedom of a province to vary the nature and condition of a program which it has contracted out of differed between the Schedule I and Schedule II programs. Under the Act, a supplemental agreement with respect to a Schedule I program could vary the conditions of the original agreement only as to the manner in which Canada would contribute to the program and the manner in which accounts were submitted. A supplemental agreement for a Schedule II program might require the program to be continued as in the original authority or it might allow a province to substitute a provincial program whose objectives were substantially similar.

The Established Programs (Interim Arrangements) Act was designed to provide for an interim period during which a province might assume greater administrative and financial responsibility for the enumerated programs and during which time more permanent arrangements governing joint programs might be devised. The length of the interim period was set out in the Act for each program and varied from Mar. 31, 1967 to Dec. 31, 1970. The tax abatement associated with Schedule I programs was also set out in the Act and varied from 1 p.c. for the health grant program to 14 p.c. for hospital insurance.

The Province of Quebec alone availed itself of the above legislation and entered into agreements contracting out of all Schedule I programs and one Schedule II program, the forestry program. At the federal-provincial meetings in September and October 1966, the Federal Government proposed a slightly revised contracting-out arrangement to the provinces who had not taken advantage of the Established Programs (Interim Arrangements) Act. The Federal Government proposed to abate, for the period 1967-70, 17 p.c. of the personal income tax in those provinces that would take over the financial responsibility for the hospital insurance, welfare (i.e., Canada Assistance Plan) and health grant programs. To ensure fiscal equity, equalization and operating cost adjustment payments were to be associated with the abatement. As the technical and vocational program was being discontinued in its existing form, the offer did not apply to that program. None of the nine provinces to whom the offer applies has indicated its intention to accept.

Capital.....	—					

<sup>1</sup> Provinces excepted are shown in parenthesis.<sup>2</sup> As here used, 50 p.c. may mean the province must contribute 50 p.c. of the cost of the project or must match the federal contribution.<sup>3</sup> F = a maximum limit set to the federal share; P = a maximum limit to the provincial share; and O = federal and provincial shares are open-ended.<sup>4</sup> Source: *Public Accounts of Canada, 1964-65*.<sup>5</sup> Not uniform.<sup>6</sup> Provinces to provide administration, services, facilities, land, loans or to undertake a specific portion of the project, etc.<sup>7</sup> Represents the provincial and/or municipal share.<sup>8</sup> Each government undertakes to carry out an aspect of the program and bear the costs associated with that aspect.<sup>9</sup> Provinces to maintain existing level of expenditures.<sup>10</sup> Share for provision of services only.<sup>11</sup> Disbursement made by Central Mortgage and Housing Corporation as Federal Government agent.

## Section 5.—Provincial Government Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the *Public Accounts* figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section. The fiscal years of all provinces end on Mar. 31.

**Revenue and Expenditure.**—Table 23 shows net general revenue and expenditure of provincial governments for the years ended Mar. 31, 1960-64, and Tables 24 and 25 give details of such revenue and expenditure for the fiscal year ended Mar. 31, 1964. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; and grants-in-aid and shared-cost contributions from other governments. Table 26 gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

<sup>1</sup> Includes bonds issued by the Ontario Junior Farmer Establishment Loan Corporation \$20,000,000 and by the Ontario Municipal Improvement Corporation \$29,000,000. <sup>2</sup> Excludes bonds due \$2,000. <sup>3</sup> Includes debts assumed by the province as follows: Metropolitan Boulevard \$63,290,282, bonds issued by the Quebec Municipal Commission in the name of school corporations \$14,989,300, and loans contracted by certain Universitarian Institutions \$18,005,413. <sup>4</sup> Includes net liability of the province re Ontario Savings Office \$80,489,000 at Mar. 31, 1965. <sup>5</sup> Excludes debt of toll road authority. <sup>6</sup> Excludes bonds of the Halliwell-Dartmouth Bridge Commission \$5,546,000. <sup>7</sup> Amount authorized; information re amounts outstanding not available. <sup>8</sup> In addition, the province has guaranteed the interest on school district debentures having a par value of \$4,411,000, on sewage disposal and water supply debentures having a par value of \$2,670,000, and on principal of mortgage loans under the elderly persons housing act of \$711,000. <sup>9</sup> Excludes guaranteed interest under the School Borrowing Assistance Act and the School Building Assistance Act on principal borrowings of \$11,151,000.

## Section 6.—Municipal Government Finance

**Municipal Taxation.**—Table 30 shows, for the year 1963, local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, these figures should not be used as a basis for interprovincial comparisons of the relative burden of municipal taxation.

**30.—Municipal Taxation, by Province, 1963**

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an interrelated framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

## Section 1.—National Accounts

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to business men concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. In the other tables in which the data are expressed in current dollars, year-to-year changes must be considered in relation to price changes over the period.

\* Sections 1 and 2 were prepared in the National Accounts, Production and Productivity Division, and Sections 3, 4 and 5 in the Balance of Payments and Financial Flows Division of the Dominion Bureau of Statistics. Section 6 was prepared by the authorities concerned.

The tables on pp. 1075-1080 cover the more important aspects of the national income analysis in annual terms. Definitions are as follows:—

*National Income.*—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

*Gross National Product.*—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

*Personal Income.*—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

*Gross National Expenditure.*—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

### Economic Activity in 1965

The momentum that has carried the gross national product (GNP) to successive new high levels since 1961 continued through 1965, when a 9.7-p.c. increase raised the current dollar value to \$52,000,000,000. As the expansion continued and the economy moved close to a full utilization of resources, price increases were more evident than in the preceding years and a 3-p.c. rise in price levels reduced the gain to 6.6 p.c. in real terms. Excluding agricultural income from GNP, the increase in 1965 of 9.6 p.c. was somewhat less than the 10.2-p.c. increase between 1963 and 1964.

During the first quarter of the year the rate of increase was unusually rapid, as a surge in inventory accumulation, following the previous quarter's disruption of supplies caused by strikes in the automobile industry, was coupled with increased demands in all other sectors with the exception of housing. The rate of growth eased in the following quarters but throughout the year all areas of demand continued strong with the exception of new housing construction where most of the recorded increase in value reflected increased prices. In the final quarter GNP gained 2 p.c. to end the year at \$53,800,000,000.

During 1965 as a whole there were gains over a wide range of economic activity. The scene was perhaps dominated by the strength of investment in non-residential construction and machinery and equipment, which were 17 p.c. above 1964 levels, with particular emphasis in the manufacturing industry and electric power, gas and water utilities. The capacity of the construction industry was strained during the year, for, in addition to business construction, government outlays on new fixed capital rose steeply; the latter are included in over-all government expenditure on goods and services which rose by 11 p.c., the main impetus coming from the provincial and municipal governments. Personal consumption once again accounted for the major part of the gain in GNP, as the increase of 8 p.c., buoyed by rapidly rising labour income and expansion of credit purchasing, contributed \$2,400,000,000 toward the total increase in GNP of \$4,600,000,000. The

demand for goods and services increased at the same rate, although, within goods, the relative strength of demand for durable goods was more pronounced, particularly for automobiles where sales continued to increase strongly for the fourth successive year.

Business investment in inventories, although easing off in each quarter, totalled \$905,000,000 for the year, appreciably higher than in 1964. However, the level of inventories and the over-all rate of accumulation when viewed against the levels of production did not appear to be unduly high.

The pressures on Canadian production of the vigorous expansion in domestic demand were somewhat moderated as part of the demand was met by a sharp increase in imports, particularly toward the latter part of the year. The deficit on current account transactions with non-residents increased to \$1,100,000,000 in 1965 from \$400,000,000, mainly as a result of a substantially lower growth in exports of goods combined with continued large increases in merchandise imports. Exports of goods continued to rise although at a less rapid pace than in 1964; the export gains were notable, however (allowing for the substantial decline in wheat sales), particularly in non-ferrous metals and automobiles and parts.

In response to the high level of demand, labour income rose rapidly throughout the year to average 11 p.c. above 1964, an increase attributable to expanded employment opportunities and to wage-rate increases in excess of those experienced in the previous year. Profits moved rather unevenly through the year to a new high, 8 p.c. above 1964; however, the fractional declines in the first and fourth quarters were in contrast to the uninterrupted gains recorded from the beginning of 1962.

As already noted, some acceleration of price increases was observed in 1965, as well as a broadening of the areas over which these increases were being experienced. In the consumer field, price increases in food and services were most significant, and price increases in construction appeared to be appreciably higher in non-residential work. At the same time, certain reductions should be noted in the selling prices of the motor vehicle industry, petroleum refineries and sugar refineries.

The robustness of the Canadian economy has gone hand in hand with increasing employment and gains in productivity, and against a background of economic expansion in the United States unprecedented in the postwar period.

**Components of Demand.**—Total consumer expenditure on goods and services reached \$32,100,000,000 in 1965, an increase of 8 p.c. over its 1964 value. The purchasing power to sustain this level came primarily from an 11-p.c. increase in labour income, while consumer debt outstanding continued to expand at about the same rate as in previous years. A 2-p.c. rise in consumer prices cut into the real gains for the period. The price rise was most pronounced in the service sector which registered an almost 3-p.c. increase for the year. A like increase in food prices was largely responsible for the advance in non-durable goods prices. New and used car prices declined about 1 p.c. while total durable goods prices declined fractionally.

The 1965 advance in total consumer expenditure, which was at a rate fractionally stronger than in the preceding year, was shared by all components. Outlays on both goods and services increased 8 p.c., the increase on services being a continuation of the pronounced rate of advance recorded in 1964. The value of durable goods purchased increased steadily as prices edged downward. Sales of new and used cars rose over 14 p.c. compared with the 12-p.c. gain shown in strike-affected 1964. Most of the major components of durable goods increased, particularly furniture and appliances and radios. Purchases of non-durable goods rose more than 7 p.c., with notable increases in several of the components—food expenditures increased almost 6 p.c., clothing  $6\frac{1}{2}$  p.c., and tobacco and alcoholic beverages 8 p.c. and 9 p.c., respectively.

Capital expenditures in 1965 were \$10,400,000,000, an amount  $14\frac{1}{2}$  p.c. higher than in 1964. Non-residential construction and machinery and equipment outlays rose 18 p.c. and 17 p.c., respectively, and housing rose less sharply, by 5 p.c. The pace of investment in business plant and equipment quickened noticeably in the second half of the year.

The strength in demand in 1965 for new capital spread to all major industrial groupings but was particularly pronounced in industries manufacturing chemicals and transportation equipment, in the paper and allied industries, in electric power and transportation utilities, and in financial and commercial services, the latter increase being partly related to preparations for Expo 67. New construction project outlays ran about one third higher in 1965 in manufacturing, electric power, gas and water utilities and in the private commercial and institutional service industries, and increased purchases of machinery and equipment were particularly heavy for railways and urban transit systems. During the past two years the distribution of capital spending has shifted to give greater emphasis to manufacturing than was evident at the commencement of the current expansion; in 1965, manufacturers' outlays were double those of 1961.

The value of residential building amounted to \$2,100,000,000, the gain of 5 p.c. over 1964 largely representing increased prices. Housing expenditures rose  $2\frac{1}{2}$  p.c. in the first half of 1965 over the latter half of 1964 but changed little in the second half of 1965 when the tightened supply of mortgage money contributed to a slowing down in the number of apartments started. Housing starts in 1965 were virtually unchanged at 166,600 and completions increased slightly to 153,000; the number of dwellings under construction was higher and stood at a record 120,000 at the year-end. The housing market was assisted by CMHC direct loans which helped to offset the decline in both conventional and NHA lending by institutions. Mortgage approvals in the last quarter of 1965 were considerably lower than the previous year's level. During 1965, as a result of the heavy construction program, pressures developed on construction wage and material costs. Costs rose by about 6 p.c. compared with an increase of about 4 p.c. in 1964.

Business capital spending plans for 1966, published in *Private and Public Investment in Canada, Outlook 1966*, indicate a substantial increase in investment; thus the sector is expected to add to domestic demand and cost pressures. However, some Federal Government budgetary measures, announced in late March, were aimed at restraining the expenditures on capital.

The tempo of investment in business inventories accelerated in 1965, amounting to \$905,000,000 compared with \$516,000,000 in 1964. Although this was by far the largest stock accumulation during the current economic expansion, the accumulation in relation to the levels of production does not appear to be unduly high. Investment in manufacturing and retail trade was the major force of expansion, contributing about 50 p.c. and 28 p.c., respectively, of the total accumulation. The quarterly pattern revealed that, after a substantial accumulation in the first quarter of the year, there was some slowing down in the rate of accumulation in the remainder of the year. The substantial build-up in the first quarter reflected, in part, unusually heavy restocking of automobiles in dealers' hands as a result of a sizable involuntary depletion in the previous quarter caused by strikes in the automobile industry.

The strongest influence in the 1965 accumulation was provided by the investment in manufacturers' durable goods, with significant increases in the stocks of primary metal, metal fabricating, machinery, transportation, and electrical goods-producing industries. Among non-durables, the increase in chemicals was notable but an offsetting movement in the stocks of other non-durable goods-producing industries left on balance a very small accumulation. The ratio of stock-to-shippments throughout the year remained below the average of the current expansion and slipped noticeably at the year-end. Almost all the increase in the rate of accumulation in the stocks of wholesale trade was accounted for by the durable lines, particularly in the industrial and transportation machinery and equipment group. The movements in the non-durables were mixed, leaving a very small accumulation. The stock-to-sales ratio for the year as a whole was below the average of the current expansion. A considerable amount of accumulation was concentrated in the holdings of retail traders. Modest increases in stocks were registered in non-durable goods, but there was a sharp accumulation in durable goods, concentrated mainly in the hands of motor vehicle dealers. The stock-to-sales ratio throughout the year was above the average of the current expansion.

During 1965 the deficit in Canada's external account jumped to \$1,141,000,000 from \$412,000,000 in 1964 (on a National Accounts basis). The change of \$729,000,000 resulted from a fall of \$599,000,000 in the surplus on merchandise trade as the increased demand for imports outpaced the growth in export sales, and a further deterioration of \$130,000,000 in non-merchandise trade; about 80 p.c. of the latter can be ascribed to higher deficits in the interest and dividend account and the freight and shipping account.

Export gains were made in live animals, crude materials such as metal ores, fabricated materials including pulp and paper and metals, and such products as machinery and transportation (cars, trucks and parts) and communication equipment. After showing little gain in the first part of the year compared with the latter half of 1964, exports climbed 8 p.c. in the second half of the year.

Domestic exports (on a Trade of Canada basis) were \$429,000,000 higher in 1965 than in 1964, a gain of \$568,000,000 in United States markets offsetting declines of \$25,000,000 and \$114,000,000 in United Kingdom and other markets. Fabricated materials and end-products contributed 43 p.c. and 36 p.c. of the gains made in the United States. A drop of \$214,000,000 in the category "food, feed, beverages and tobacco" accounted for the over-all decline in exports to markets outside the United States and the United Kingdom. Whereas shipments of wheat and flour under the first major contract with the Soviet Union were important throughout the first half of 1964, shipments on the second large contract began late in the third quarter of 1965.

Import statistics indicate strength in Canadian demand for imported fabricated chemicals, metal and metal products, machinery, transportation and communication equipment, and other equipment such as laboratory requirements and computers.

**The Government Sector.**—Total revenues of governments combined (excluding intergovernmental transfers) increased by \$1,676,000,000 to \$16,373,000,000, an 11½ p.c. advance over the 1964 total of \$14,697,000,000. Expenditures increased less sharply, by 9½ p.c. above the 1964 total, to \$16,127,000,000, resulting in a surplus of \$246,000,000 (on a National Accounts basis) compared to a small deficit of \$21,000,000 in 1964. The improvement in the over-all position was entirely at the federal level; because the increase in revenues was at a greater rate than the increase in expenditures, the surplus rose to \$568,000,000 from \$296,000,000 in 1964, making this the second consecutive year to record a federal surplus. The deficit at the provincial-municipal level of \$322,000,000 was little changed from 1964.

All components of government revenue increased over the year, reflecting the continued buoyancy and expansion of activity in the economy. The largest increases occurred in revenues from indirect taxes and personal direct taxes.

Total indirect tax revenue rose by approximately 12 p.c., with the Federal Government and the provincial-municipal governments sharing almost equally in the absolute increase. The major part of the gain at the federal level was in excise taxes, which increased 19 p.c. compared with 14 p.c. for all federal indirect taxes; this was in part a reflection of the final stage of the imposition of the higher excise tax on production equipment and building materials. Provincial revenues from gasoline and sales taxes rose by 11 p.c. and 16 p.c., respectively, partially caused by some upward revision in rates. The gain in property taxes, due to both increased rates and bases, accounted for most of the rise at the municipal level. Total corporate and personal direct taxes reached a level of \$6,076,000,000, an increase of 12 p.c. over 1964. Reflecting the sustained improvement in employment conditions and rising incomes, total revenue from federal and provincial personal income taxes was 13½ p.c. higher than in 1964, even after allowing for a reduction of about 10 p.c. in the federal personal income tax rates from July 1, 1965. The provincial share of personal income taxes increased markedly during the year, a reflection of the increased abatement under the terms of the Federal-Provincial Fiscal Arrangements Act.

Total expenditures of all levels of government (excluding intergovernmental transfers) advanced by approximately 10 p.c. or \$1,400,000,000 in 1965, most of the gain occurring at the provincial-municipal level. Outlays on goods and services, which increased by 11

p.c., were strongly reinforced by a 29-p.c. or \$533,000,000-increase in capital expenditure, with four fifths of the increase occurring at the provincial-municipal level. Provincial-municipal expenditures on goods and services rose sharply by approximately 13 p.c.; federal outlays on goods and services rose by over 7 p.c., accounted for by an increase of almost 14 p.c. in non-defence goods and services and a decrease of 1 p.c. in defence goods and services. Transfer payments to persons (excluding interest on the public debt) showed an increase of 9 p.c. The Federal Government recorded an increase of 3 p.c. but the increase at the provincial-municipal level was 15 p.c. The substantial increase by the provincial-municipal governments was caused by larger grants to hospitals and educational institutions.

**Price Movements.**—Over the past two years there was a moderate rise in the rate of over-all price increase. With prices advancing by nearly 3 p.c. between 1964 and 1965, the increase of 9.7 p.c. in the value of GNP was reduced to a gain of 6.6 p.c. when expressed in real terms.

In 1965 the price component of personal expenditure advanced by 2 p.c. compared with 1.6 p.c. in the preceding year. Prices associated with business gross fixed capital formation exhibited approximately the same rate of increase in both years, while prices for both exports and imports showed a smaller increase in 1965 than in 1964. Within personal expenditure, the components showed somewhat diverse movements. Durable goods prices declined fractionally compared with a 1-p.c. decline in 1964, the prices of new automobiles and appliances decreased by approximately 0.5 p.c. and the prices of furniture increased by 2 p.c. Food prices, increasing by about 2½ p.c. largely as the result of much higher meat prices brought about by short supply conditions in the United States, dominated the movement of non-durable goods prices. Prices of non-food commodities continued to increase by slightly less than 1 p.c. Prices of services rose by close to 3 p.c., reflecting advances of 3½ p.c. or more in all major components other than rents and communication-related services, both of which increased by about 0.5 p.c.

Prices associated with residential building showed somewhat lower increases than in 1964. This appeared to be associated with building material prices; the price index of lumber and its products increased by over 8 p.c. in 1964 but only 5 p.c. in 1965 and the prices of roofing materials increased by about 6 p.c. in 1964 but fell by 3 p.c. in 1965. The labour component of both the residential and non-residential price indexes increased by somewhat more in 1965 than the 4½-p.c. increase recorded in 1964. Shifting expenditure patterns affected machinery and equipment prices in both years; had a fixed pattern been used to estimate price changes, the increases in the prices of machinery and equipment would have been 3.3 p.c. in 1964 and 2.9 p.c. in 1965.

Within merchandise exports, price changes were somewhat diverse. The drop in the price of wheat early in 1965 was largely responsible for a 1½-p.c. price decline in the food, feed, beverages and tobacco group. Both the crude materials, inedible and the end-products, inedible groups increased by a little over 1 p.c. and the fabricated materials, inedible group gained 2 p.c. Within the latter group, the price of newsprint showed only a fractional change, while certain metal prices, responding to world market conditions, increased significantly.

The movement of merchandise import prices was again dominated by changes in the price of sugar, which declined by more than 50 p.c. relative to 1964. The fractional increase in the over-all import price index resulted from moderate increases in the crude materials, inedible and the end-products, inedible groups, an increase of approximately 3 p.c. in the fabricated materials group, and a decrease of over 16 p.c. in the food, feed, beverages and tobacco group.

**Income Flows.**—Wages, salaries and supplementary labour income totalled \$26,000,000,000 in 1965 and was 11 p.c. higher than in 1964. Labour income originating in the goods-producing industries advanced more rapidly than the service-producing group. The rise in labour income resulted in part from the continued sharp increase in employment in non-agricultural industries, where expanded job opportunities more than

absorbed new entries to the labour force, and the number of unemployed fell. Numbers in the labour force as a proportion of the population 14 years of age or over rose in 1965 to a level not achieved since the late 1940s. In addition to the increased numbers employed, there was an appreciable advance in average weekly wages and salaries.

Wages and salaries in the goods-producing industries rose  $12\frac{1}{2}$  p.c. with the largest gain (24 p.c.) occurring in construction where about two thirds of the increase resulted from a higher volume of labour input. The mining industry advanced 13 p.c. and the forestry and manufacturing groups each increased about  $10\frac{1}{2}$  p.c. Gains in mining, manufacturing and construction wage and salary payments were the largest recorded in the past decade. Wages and salaries in the service-producing industries were about  $10\frac{1}{2}$  p.c. above the 1964 total. The finance and service industries increased about  $12\frac{1}{2}$  p.c. and wages and salaries in trade advanced  $10\frac{1}{2}$  p.c. Somewhat smaller increases were recorded in the transportation, storage and communication group,  $8\frac{1}{2}$  p.c., and in government non-military wages and salaries,  $7\frac{1}{2}$  p.c.

Corporation profits (before taxes and before dividends paid to non-residents) reached a record level of \$5,200,000,000 in 1965 and were 8 p.c. higher than in 1964. Starting the year with a moderate first quarter (about level with the exceptionally high fourth quarter of 1964), profits continued to climb through the second and third quarters before levelling off in the fourth. Profits in the manufacturing group rose about 7 p.c. over 1964, general strength being evident in most industries. Of particular significance were the increases in food and beverages (8 p.c.) and metals (15 p.c.), the latter reflecting the return to more stable production conditions in the transportation equipment industry. These movements were partly offset by increased costs in the wood and paper industries, the profits of each of which declined 15 p.c.

There was a 9-p.c. rise in the profits of the transportation, storage and communication industry. The continued strength of consumer demand contributed to the 15-p.c. increase in retail trade profits, and wholesale trade profits showed an upward movement of 10 p.c. The performance of banks and the improved revenues of insurance carriers resulted in a 9-p.c. advance in the finance, insurance and real estate group. The profits of service industries continued to increase, moving up 22 p.c. in 1965; this rate was second only to that of 1962, the first full year of the current expansion. The marginal decline in the profits of the mining, quarrying and oil wells group was attributable to the irregularly high level of foreign dividend receipts in 1964.

Rents, interest and miscellaneous investment income increased by 9 p.c. over 1964, one of the larger increases in recent years. This item was marked by an increase in the government component, as the profits of government business enterprises and other investment income showed a notable rise. The increase was largest at the provincial level. Among the other investment income items, the rental income of persons showed mixed movements; residential rents declined, reflecting rising expenses, but the rental income of farms increased sharply.

Benefiting from strong second and third quarters, net income of non-farm unincorporated business in 1965 reached a level of \$2,877,000,000, 6 p.c. above the 1964 figure. The largest gain,  $7\frac{1}{2}$  p.c., was in service industries which contributed more than half of the total increase in the net income of non-farm unincorporated business.

Accrued net income of farm operators from farm production in 1965 was \$1,645,000,000, 12 p.c. higher than in 1964 but slightly lower than in the bumper-crop year 1963. Farm cash receipts, the largest component of farm income, increased 8 p.c. and farm operating expenses 5 p.c. over 1964; both items attained record levels. A large part of the increase in the accrued net income of farm operators can be attributed to considerably higher grain production. The value of crop production in 1965 was estimated at \$1,301,000,000, the third highest on record and close to 15 p.c. above 1964. On the other hand, value of grain marketings in 1965 was smaller than in 1964. Reflecting considerably higher receipts from sales of cattle, calves and hogs, livestock production increased 9 p.c. above the 1964 level. Sales of potatoes, dairy products and eggs also increased.

**Economic Activity in the First Nine Months of 1966**

For the first nine months of 1966, gross national product advanced 11.3 p.c. over the same period in 1965. Although this rate of advance in the value of GNP was higher than the 9.7 p.c. recorded in the full year 1965, in real terms the increases were 6.6 p.c. for both periods because of some acceleration in the rate of price rise. Within the year 1966, quarter-to-quarter increases in GNP became successively smaller, ranging from an unusually strong first-quarter advance of 4.5 p.c. to a third-quarter advance of 0.7 p.c.

In the nine-month comparison, final demand increased at a slightly greater rate than did the value of production and, as a consequence, there was an advance in imports of over 14 p.c. The strength in demand was broadly based, extending to all categories other than new housing, which increased only 4½ p.c. In contrast, business expenditures on plant and equipment rose 19 p.c., exports 17 p.c., government expenditures 15 p.c. and consumer spending 9 p.c.

Advances in the income components were more diverse; labour income increased 13 p.c. but profits showed virtually no change. Accrued net farm income rose 43 p.c. but net income of the unincorporated business sector increased only 3 p.c.

## Section 2.—Industry Production Trends

### Indexes of Real Domestic Product

The Dominion Bureau of Statistics in 1963 made available a new set of production data pertaining to the entire spectrum of Canadian industries. These data, in the form of volume of production indexes, are measures of value added for each industry expressed in the dollars of a base year. Technically, they are termed "indexes of real domestic product (GDP) at factor cost originating by industry".\* The value added, or GDP, volume indexes can be regarded as an extension of the index of industrial production† to encompass the remainder of the economy. Concepts and basic methods used to construct both indexes are the same. Thus, industry production index coverage is extended from mining, manufacturing and electric power and gas utilities, for which volume indexes have been published since the 1920s, to include all other major industrial divisions—agriculture, forestry, fishing and trapping, construction, retail and wholesale trade, finance, insurance and real estate, transportation, storage and communication, public administration and defence, and community, recreation, business and personal service. However, only the index of industrial production is published on a monthly basis; for the remaining industries only quarterly and annual indexes are currently being published. The GDP indexes can also be regarded as an extension of the national accounting framework, i.e., as an elaboration of the supply side of the national income accounts.\*

In measuring the output of a single product such as steel, it is normal to think in terms of tons of steel when the question of quantity arises. When measuring the combined production of steel and natural gas, there is an obvious need for a common denominator and it is appropriate to use the average unit prices of a certain time period (chosen as the base) to value the quantities produced before adding them together. The resultant quantity, volume or real output measure can be subsequently left in its constant or base

\* *Indexes of Real Domestic Product by Industry of Origin, 1935-61* (Catalogue No. 61-505). This paper provides a detailed explanation of concepts, uses and limitations, data sources, methodology, etc., and covers a much wider range of industries than provided in this Section. Current quarterly data are published in *DBS monthly Index of Industrial Production* (Catalogue No. 61-005).

† See *Revised Index of Industrial Production, 1935-57* (Catalogue No. 61-502) and the current monthly publication *Index of Industrial Production* (Catalogue No. 61-005), together with its 1966 Annual Supplement which contains historical revisions to the index of industrial production and its components for the 1949-65 period.

period dollar form or it can be expressed in index number form. The latter is accomplished by dividing the constant dollar aggregate of the current period by the dollar aggregate for the base period and multiplying by 100. In constructing a quantity index for a combination of industries where the output of one industry becomes the input of another, the portion double-counted must be eliminated. This is accomplished by revaluing both intermediate input (materials, fuel, etc.) and total output in terms of the dollars of a common base year and subtracting the constant dollar value of the former from the latter to yield a constant dollar value added aggregate.\* This aggregate is the quantity or volume measure represented by the indexes presented herein.

The annual indexes are well suited for studies of production trends, growth rates and inter-industry comparisons, but the quarterly indexes provide a much better tool for the study of the cyclical behaviour of industries, short-term changes in production and, in fact, for most types of current analysis. Statistics computed for less than annual intervals, however, are frequently subject to strong seasonal influences, and variations in the number of working days during a quarter may cause differences in the levels of output between two quarters which otherwise would not exist. Accordingly, the quarterly real output indexes have been adjusted for both seasonal and calendar variation. The effects of the seasonal adjustment are shown on the quarterly chart for the period 1949-65.

**Factors Underlying Industrial Output Trends, 1946-65.**—The early postwar period was marked by several major expansions. The first was based on satisfying the backlog of war-deferred investment and consumer demand and on supplying the needs of the war-devastated countries, especially for various materials. This was followed by some slowing down in production but the requirements of defence-supporting industries after the outbreak of the Korean hostilities and stockpiling requirements at home and abroad introduced a second expansionary period. The third was the investment boom of the mid-1950s during which output reached a new high level. These strong demand influences combined to make most of this period one of fairly rapid and sustained growth. During the late 1950s the rate of increase diminished, as external sources of supply for many commodities multiplied and as competition intensified. At the same time, there was an absence of strong stimulants to domestic demand, such as the deferred demand and the population growth of the preceding period. During the 1960s, however, the first waves of the postwar generation exercised a growing influence on the demand for goods and services

\* See footnote \* on previous page.

and this proved to be one of the major stimuli to the current expansion which began early in 1961 and continued into 1966. Other notable features of the expansion were: the relatively slow growth of imports compared with previous expansion periods, particularly after the stabilization of the Canadian dollar and other government measures undertaken in mid-1962 (although some acceleration took place in imports of machinery and equipment during 1964 and 1965 in response to the increased investment in construction and plant and equipment); the increase in exports, particularly during the latter part of 1963 and early 1964 when large amounts of wheat were sold abroad; the above-average output of the mining and agriculture industries since 1962; the substantial gains in the production of the iron and steel and motor vehicle and parts industries throughout most of the period; and the increased investment activity in both non-residential and residential construction and in machinery and equipment during 1964 and 1965.

Along with the increases in total final demand, there were shifts in the composition of demand, which affected the output of the various industries. Imports retained roughly the same relative share of the gross national product but the share of exports declined from 27.1 p.c. in 1946 to 21.5 p.c. in 1965, an indication of the growing importance of the domestic market as an outlet for the products of Canadian industry. Government expenditure and business gross fixed capital formation made considerable relative gains but personal expenditure on goods and services as a percentage of total expenditure declined from 67.8 p.c. in 1946 to 61.6 p.c. in 1965.

Even more remarkable than some of the demand-induced changes were the striking changes brought about by the technological discoveries and innovations that transformed whole production processes and opened up previously unknown areas in the fields of manufacturing, transportation and communication. Newer industries, such as air transport, assumed major importance in a comparatively short time; entirely new industries, such as gas pipelines, appeared; and a profusion of new products were created, such as the petrochemicals of the chemicals industry and the television and other electronic products of the telecommunication equipment industry. As was to be expected, the industries in a position to benefit from such innovations were among the most rapidly expanding in the economy, although the impact of the expansion spread through the entire economic system. The changes in production and demand also influenced the level of employment in the various industries; there was a considerable shift in employment during the postwar period from the goods-producing to the service-producing industries and most of the loss in the former took place in agriculture.

## 12.—Quantity Indexes of Real Domestic Product at Factor Cost, by Industry of Origin, 1950-65

**Industrial Expansion, 1946-65.**—Although all the major industry groups expanded during 1946-65, development was not uniform throughout the period. Three important types of factors affecting the expansionary paths of industries were in evidence at some point during the period. The first may be described as some special factor at work in a particular industry, the effects of which would be most noticeable in that industry—for example, the demand for uranium which had an important influence on the mining industry during the latter half of the 1950s, the opening up of new mineral resources such as the iron ore mines in Quebec-Labrador, and certain technological innovations such as the development of synthetic materials or television. The second type of factor is much more general in its effects and in its causes. Such factors as increased demand for consumer goods resulting from a rising standard of living and a growing population, shifts in world trading patterns or shortages causing increased demand for export goods, the surge of investment activity associated with replacement cycles, as well as attempts to broaden the base of economic activity through investment in research, social overhead capital, education, improved management and marketing techniques, or a more efficient production process (or a confluence of all these factors) appear to lie at the root of such postwar expansions as the investment boom of the mid-1950s or the rapid expansion in production since 1961. The third type of factor would be some unique and far-reaching event, of which the Korean War might serve as a conspicuous example.

All three factors, jointly or in turn, have reacted on the various industries resulting in the upswings in aggregate production. The percentage growth of each of the main industrial groups in the 1946-65 period was as follows:—

<i>Industry</i>	<i>p.c.</i>	<i>Industry</i>	<i>p.c.</i>
Agriculture.....	1.5	Trade.....	4.1
Forestry.....	1.7	Finance, insurance and real estate.....	5.0
Fishing and trapping.....	1.8	Public administration and defence.....	4.0
Mining.....	9.1	Community, recreation, business and personal service....	3.6
Manufacturing.....	4.8		
Construction.....	5.1	<b>REAL DOMESTIC PRODUCT.....</b>	<b>4.4</b>
Electric power and gas utilities.....	9.6		
Transportation, storage and communication.....	4.6		

Foremost in growth was the electric power and gas utilities industry, followed by the mining and construction industries. All three were strongly affected by technological advances, new discoveries and a fairly well sustained demand for their products. The demand in mining frequently came from abroad, resulting in relatively high export sales and providing incentive for the opening up and developing of new mineral resource areas. Some slackening in construction activity was evident following the unusually high levels reached during the mid-1950s but since 1963 the swing has again been upward.

Although most of the other industry divisions (except agriculture, forestry and fishing and trapping) expanded at roughly the same average rate of between about 4 p.c. and 5 p.c., the manufacturing, trade, and transportation, storage and communication industry divisions, which together account for about one half of the total output, also showed strikingly similar cyclical patterns. Within manufacturing it was the durables component that expanded particularly rapidly during the cyclical upturns and that benefited from the need for machinery and equipment in the periods of heavy investment and from increased consumer demand for such products as motor vehicles and electrical appliances during the current expansion. Non-durables maintained a fairly steady rate of expansion for most of the postwar period, largely in response to increased population and demand for industrial materials. A similar pattern was observable in trade, with retail trade exhibiting a relatively smooth expansionary trend.

The community, recreation, business and personal service industry division was relatively insensitive both to cyclical and irregular influences but, along with some other steadily expanding industries such as finance, insurance and real estate, non-durables and retail trade, it helped to sustain aggregate production and growth during periods of contraction and expansion. Although this division as a whole showed a less-than-average rate of growth, some of its components, such as business services, education and hospitals and restaurants, hotels and motels, were among the most rapidly and steadily expanding in the economy.

The rates of growth in the forestry, agriculture, and fishing and trapping divisions were also below average and were subject to pronounced irregular fluctuations in output—forestry because of the nature of its production processes and also, to some extent, because of its sensitivity to changes in world demand and price; agriculture because of marked year-to-year differences in output more often caused by weather conditions and similar factors than by changes in prices and demand conditions; and fisheries because of its dependence on the vagaries of nature.

### Production of Commodity-Producing Industries

The data contained in the tables under this heading are published in the DBS report *Survey of Production*.<sup>\*</sup> The scope of the survey of production is limited to industries chiefly engaged in the production of commodities and it measures production in current dollars. This is in contrast to the real domestic product series (pp. 1080-1084) which encompasses all industries and measures production in terms of the dollars of a base year.

Tables 13 and 14 give "census value added" production data, classified by province and industry, respectively. Census value added is derived by deducting the cost of materials, fuel, electricity and process supplies consumed in the production process from the gross value of output (shipments or sales adjusted for inventories). The figures include interim classification and valuation changes in mining and manufacturing brought about by the adoption of the 1960 standard industrial classification of establishments. However, the two industry aggregates continue to consist of census value added accruing from their primary activity only.<sup>\*</sup> Standard industrial classification changes have not yet been implemented for other industries.

<sup>\*</sup> DBS Catalogue No. 61-202. See Appendix II of the 1963 issue for census value added in manufacturing (all activities) 1961, 1962 and 1963.

### Section 3.—Aggregate Productivity Trends

Increasing interest in questions of economic growth, cost-structure and international competitiveness, and in the relationships between output, employment, earnings and prices has focused attention on productivity as a framework within which such problems can usefully be discussed. Recognizing this interest, the Dominion Bureau of Statistics has made available annual indexes of output per person employed and per man-hour in Canada covering the commercial industries as a whole, with separate detail for agriculture and the commercial non-agricultural industries, manufacturing and the residual commercial non-manufacturing industries of this universe.\*

Although these measures relate output to a single input only, namely labour time, they do not measure the exclusive contribution of labour to output. Changes in indexes of output per unit of labour input reflect the combined influence of a number of separate though interrelated factors such as the amount and quality of capital equipment, the extent of utilization of available capacity, managerial efficiency and the impact of technological progress, as well as the skill and effort of the work force.

**Sources of Data.**—The output components of the various indexes of output per unit of labour input referred to here are the historical indexes of "real domestic product (GDP) at factor cost by industry of origin", described in Section 2, p. 1080. These indexes, which were developed within the conceptual framework of the national accounts and which measure in constant dollar terms the unduplicated contribution of each component industry to total output, are considered basically suitable for productivity measurement when matched with the corresponding input measures.

The major sources for the employment and man-hour indexes were the monthly labour force and employment surveys, and these were supplemented by data from such sources as the annual censuses of manufacturing and mining and the decennial census of population. Since the data from these diverse sources varied considerably in their coverage, concepts and methods of compilation, care had to be exercised in their selection, adaptation and combination into aggregate measures of labour input which would be conceptually and statistically consistent, both internally and in relation to the output data. Labour force survey data were used for the paid worker estimates of agriculture and of fishing and trapping, while those for manufacturing and mining were based on adjusted annual census data. Estimates for most of the remaining industry divisions were derived from adjusted employment survey data. Estimates of other than paid workers (own-account workers, employers and unpaid family workers) were derived mainly from the labour force survey. The estimates of average hours worked, which were needed for the indexes of output per man-hour, were also based on labour force survey data, except in the case of manufacturing, where estimates of man-hours paid from the census of manufactures were adjusted to the man-hours worked concept.

**Growth Rates.**—Output per person employed in the commercial non-agricultural industries, to which the initial coverage of the indexes was confined, grew at an average annual rate of 2.5 p.c. between 1946 and 1965. Because of the decline in average hours worked per person, this was a lower rate of growth than that of output per man-hour which, during the same period, increased by 3.2 p.c. per annum. Corresponding figures for manufacturing were 3.4 p.c. and 3.8 p.c. and those for the residual non-manufacturing industries of the commercial non-agricultural sector were 2.1 p.c. and 2.9 p.c., respectively.

In agriculture, the average annual rates of growth of output per person employed and per man-hour between 1946 and 1965 were 5.3 p.c. and 5.5 p.c., respectively. However, in view of the difficulties of measuring the number and especially the man-hours of persons employed in agriculture, data presented for this industry division should be regarded as

\* See DBS Reference Paper *Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Non-agricultural Industries, 1947-65* (Catalogue No. 14-501) and the first subsequent annual publication *Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Industries, 1946-66* (Catalogue No. 14-201).

approximate. In the commercial industries as a whole, output per person employed increased between 1946 and 1965 at an average annual rate of 3.3 p.c., while output per man-hour grew by 4.1 p.c. per annum.

**Inter-industry Shift Effects.**—In addition to measuring the changes in productivity within the component industries, the aggregate productivity indexes measure the effect of shifts in employment and production between industries having different levels of productivity. One of the most significant such shifts within the commercial industries of Canada during the postwar years was from agriculture to the non-agricultural industries, where a higher level of output per unit of labour input prevails. The effect of this shift can be measured in various ways and a number of alternative calculations have been carried out for the most recent annual publication,\* all of which confirm, to a greater or lesser extent, that the decline in the relative importance of agriculture made a positive contribution to the total increase in output per person employed in the commercial industries between 1946 and 1965.

#### Section 4.—Canadian Balance of International Payments\*

Canada's total commercial and financial transactions with residents of other countries are presented in summary form in statements of the Canadian balance of international payments. The current account shows separately the principal types of transactions in goods and services with non-residents. The capital account provides a distribution of capital movements into direct and portfolio investments and into long-term and short-term forms. The difference between the current account balance and the balance of these capital movements in an accounting period is reflected in the change in the official holdings of gold, foreign exchange, and Canada's net International Monetary Fund position.

During the past decade, a wide degree of imbalance has characterized Canada's international payments. Large current account deficits have customarily been associated with periods of Canadian prosperity. High levels of investment, rising personal consumption and the growth in government expenditures, including defence outlays abroad, have contributed to the deficits. These large current deficits, which reached a peak of \$1,487,000,000 in 1959, have reflected and been financed by substantial inflows of capital. Following this record high level, the imbalances in current transactions narrowed in successive years to \$424,000,000 in 1964 but widened in 1965 to \$1,083,000,000, as a result of a sharp contraction in the merchandise surplus.

\* More detailed information is given in DBS annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201) and in *Quarterly Estimates of the Canadian Balance of International Payments* (Catalogue No. 67-001).

**Current Account Transactions.**—The surplus on merchandise trade,\* which emerged in 1961 for the first time since 1954, expanded sharply in 1963 and in 1964 when it exceeded \$700,000,000; an important element in this rise was the extraordinary sales of wheat and flour to the U.S.S.R. and other Communist countries. Thus, the reduction of Canada's deficit on current transactions in goods and services between 1959 and 1964, followed by an upturn in 1965, was mainly the result of a shift in the balance of commodity trade. This balance varied widely; the record deficit of \$728,000,000 occurred in 1956 when it accounted for more than one half of the total current account deficit and the unusually large surplus of \$701,000,000 for 1964 exceeded the level of the merchandise surpluses of the immediate postwar years. The export balance of \$118,000,000 in 1965 was markedly lower than the surpluses of \$173,000,000 and \$184,000,000 in 1961 and 1962. The non-merchandise deficit rose rapidly from 1955, when it still stood below \$500,000,000, to 1961, when the \$1,000,000,000-level was exceeded. In recent years, the "invisible" deficit has fluctuated within a fairly narrow range and stood at \$1,201,000,000 in 1965.

Since 1954, when merchandise exports and imports were almost equal at \$3,900,000,000, exports have increased fairly steadily to a record of \$8,745,000,000 in 1965. Imports, on the other hand, have shown wider fluctuations in their growth pattern. The value of imports in current dollars rose more than 40 p.c. in two years to \$5,565,000,000 in 1956 and, except for a substantial drop of nearly 8 p.c. to \$5,066,000,000 in 1958, remained at about that level until 1960. Thereafter the value rose at a generally increasing rate of growth to \$8,627,000,000 in 1965, which was about 56 p.c. above 1960.

In the past decade, the relative importance of exports of manufactured goods increased markedly, that of metals and minerals advanced more moderately, and the percentage share for forest products narrowed visibly. The relative position of wheat and wheat flour, which had been diminishing, recovered sharply in 1961 as a result of the large shipments of grain to Mainland China and other Communist countries. The very heavy shipments of wheat on the Russian account, together with sizable exports to Britain, Japan, Mainland China, West Germany and Eastern European countries, boosted the total value of wheat and wheat flour exports in 1964 to about \$1,100,000,000, although the total declined to some \$900,000,000 the following year. During the 1960s, an increasing share of the Canadian national output has moved into foreign markets. Contributing to the gain of some \$500,000,000 in merchandise exports in 1965 were larger shipments of meat, wood pulp, newsprint, non-ferrous metals, crude petroleum and natural gas, chemicals and fertilizers, and manufactured goods. Within the manufactured goods group, exports of motor vehicles and parts doubled from less than \$180,000,000 in 1964 to more than \$350,000,000 in 1965, following the signing at the beginning of the year of the Canadian-United States Automotive Agreement. However, with the removal of tariffs from the two-way trade in new cars and parts, the rise in imports exceeded that in exports and the deficit on trade in automobiles and parts expanded in 1965.

The value of all imports rose sharply in 1965 to the highest recorded level of \$8,627,000,000. Motor vehicles and parts accounted for over \$300,000,000 of the expansion and smaller but still substantial increases took place in imports of industrial materials, machinery, equipment and tools, coal and fuel oil, and consumer goods. Small rises in a variety of food commodities were, however, not enough to counterbalance a decline of nearly \$50,000,000 in raw sugar imports.

The deficit on Canada's non-merchandise transactions with foreign countries, which since 1959 has been on a high plateau exceeding \$1,000,000,000, rose to \$1,201,000,000 in

\* Commodity trade statistics have been adjusted to reflect more closely the timing of transactions, particularly for investment goods, and to exclude commodities which are either covered elsewhere in the accounts or are not pertinent for balance of payments purposes.

1965. This deficit has risen about 150 p.c. in the past decade. A total of \$761,000,000 or more than 60 p.c. of the 1965 deficit was directly related to Canada's indebtedness abroad. Interest and dividend payments by Canadians to non-resident investors reached \$1,071,000,000, transfers in other forms of investment income amounted to well over \$200,000,000, and there were also growing payments abroad for a variety of business services. Furthermore, some hundreds of millions of dollars of earnings, which accrued to foreigners but which were retained in Canada for reinvestment, are excluded from the current account.

The contribution by travel transactions of nearly one fifth of the deficit in 1960 contracted sharply in the following years, in particular after the lowering of the Canadian dollar in May 1962 to a new fixed par value of 92½ cents (U.S.). From a small deficit in 1962, the balance on travel changed to a small surplus in 1963 and then returned to a deficit position of \$50,000,000 and \$32,000,000 in 1964 and 1965, respectively. Net payments of migrants' funds and inheritances, which represented about 6.5 p.c. of the "invisible" deficit in 1961, narrowed gradually to a position of balance in 1965. The deficit on freight and shipping services fluctuated between about 3 p.c. and 8.5 p.c. of the total in the period 1961-65, and the value of gold production available for export served to reduce the non-merchandise deficit by between 11.5 p.c. and 15 p.c. The substantial remaining portion of the deficit, fluctuating between 36 p.c. and 44 p.c., originated from other transactions, including miscellaneous investment income, referred to previously, and official contributions; these stood at a record level of \$92,000,000 in 1965.

The characteristic bilateral distribution of the Canadian current account balances was maintained in 1965; a surplus from transactions with overseas countries partially covered a deficit with the United States. However, a rise of nearly 17 p.c. in this deficit from \$1,635,000,000 in 1964 to \$1,912,000,000, combined with a decline of about 32 p.c. in the surplus with overseas countries from \$1,211,000,000 to \$829,000,000, contributed to the increase in the over-all deficit from \$424,000,000 to \$1,083,000,000. In current dollars, the 1965 deficit with the United States exceeded the previous record level of \$1,650,000,000 reached in 1956; the surplus on current transactions with Britain declined from the recent high level of \$605,000,000 in 1964 to \$510,000,000; and the surplus with other countries was nearly halved from \$606,000,000 in 1964 to \$319,000,000 in 1965.

**Capital Movements.**—In 1965, Canada continued to draw substantially on the resources, both real and financial, of the other countries of the world, as the net capital inflow of \$1,240,000,000 (excluding the change in official monetary assets) moved up again to the \$1,000,000,000-to-\$1,500,000,000 range that prevailed from 1956 to 1962. It was more than 50 p.c. above the net inflow in 1964 and at about the same level as in 1961. Capital movements in long-term forms, covering direct investment, portfolio security transactions, official loans and other long-term investments, amounted to \$713,000,000 in 1965, down 13 p.c. from the total of \$820,000,000 in the previous year. The long-term capital inflow covered only about two thirds of the current account deficit following the years 1963 and 1964 which were the first since 1956 in which the long-term inflows exceeded the deficit on transactions in current goods and services. Capital movements in short-term forms, which were on balance outwards in 1964, were reversed into sizable inflows totalling \$527,000,000. Contributions to the inflows were increases in foreign currency banking loans to Canadian residents together with a reduction of their bank balances and other short-term funds abroad. An offsetting influence was the decline in the inflow attributable to the total transactions in the short-term paper and obligations of Canadian finance companies.

The net inflow in 1965 of \$405,000,000 of capital for direct investment in foreign-controlled enterprises in Canada was up 50 p.c. from the low levels of 1963 and 1964.

In the main, the inflows continued to reflect investment by foreign corporations in their subsidiaries and branches, which contributed to new capital formation in Canada; manufacturing enterprises and petroleum and natural gas received the largest shares. The flow of direct investment abroad of Canadian capital was estimated at \$125,000,000 in 1965, which was higher than in 1964 but slightly lower than in 1963.

Capital inflows arising from transactions in Canadian and foreign securities amounted to \$541,000,000 compared with \$645,000,000 in 1964. New issues of bonds sold to investors in the United States continued to be the most important factor in the inflow. Canada received \$32,000,000 under the arrangements relating to the Columbia River Treaty; the remaining capital movements in long-term forms were dominated by large net outflows arising from loans and advances under official programs to finance Canadian exports. Canada's external monetary assets rose by \$157,000,000 in 1965. The official holdings of gold and foreign exchange declined by \$11,000,000 and Canada's net International Monetary Fund position rose by \$168,000,000.

Direct investment inflows have been a significant ingredient in the capital account in the past decade. Continuing and substantial for nearly the entire period, these receipts contributed in particular to resource development and the growth of associated industries. However, from 1956 to 1959 and again in 1963 to 1965, the inflow for direct investment, substantial though it was, was less than the inflow of portfolio capital, as some of the sharply increased demands for new capital were channelled to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporations, provincial governments and municipalities were all important borrowers.

## Section 5.—Canada's International Investment Position\*

Canada's balance of payments is influenced to a considerable extent by the size and character of its balance of international indebtedness, a phrase used in the broad sense generally accepted in balance of payments terminology to include equity investments as well as contractual borrowings. This is true not only through the servicing of capital involving interest, dividends and miscellaneous income payments, but also through the influences of foreign investment on the Canadian economy and on the shape and direction of its external demands.

Canada has been among the world's largest importers of private long-term capital. The very substantial capital formation which was a feature particularly of the 1950s was associated with an unprecedented growth in the country's external liabilities. These investments contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and added significantly to Canadian production, employment and income. At the same time they added substantially to the continuing burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to \$32,800,000,000 at the end of 1964; non-resident-owned long-term investments in Canada had reached a book value of \$27,400,000,000 (in the two decades since World War II their value has quadrupled). The part of these investments in establishments controlled outside of Canada totalled \$15,900,000,000. In 1964 direct investments grew rather less rapidly than in earlier years. Investments in other Canadian equities, although smaller, have also been substantial and there have been periods in recent years of sharp increase in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside of Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore, potash and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled \$12,700,000,000 at the end of 1964 and government-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness, including equity investments, at the same date was estimated at \$20,100,000,000, more than three quarters of which was incurred since 1950.

**Foreign Investments in Canada.**—Dependence upon external sources of capital for financing in periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth that occurred before World War I, non-resident investment was very high and the main source of that investment was London.

\* An extended historical review appears in DBS report *Canada's International Investment Position, 1926 to 1954* (Catalogue No. 67-503) and more recent statistics in the annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201). Additional detailed material will be found in the annual report under the Corporations and Labour Unions Returns Act.

However, during the first part of the inter-war period, the United States became the principal source of external capital and by 1926 the portion of Canada's international debt owned in that country exceeded that owned in Britain. With some interruption during the 1930s, United States investment in Canada continued to increase, particularly after 1947 when the period of intense activity in the petroleum industry got under way. Over half of the United States investment in Canada at the end of 1964 was accumulated since 1955. At \$21,443,000,000, United States investments in the later year continued to represent more than three quarters of all non-resident investments in Canada and made up 80 p.c. of the increase since 1955. The main rise occurred in direct investments in companies controlled in the United States, which almost doubled in the 1955-64 period. In the same period, portfolio investments in Canada owned in the United States more than doubled, due mainly to large sales of new issues of securities made in that country.

British investments in Canada totalled \$3,463,000,000 at the end of 1964 and accounted for only about 13 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. After reaching a low point in 1948, the value of British investments in Canada increased each year to 1962, declined slightly in 1963, partly as a result of Canadian repatriation of investments in railways and other utilities, and increased again in 1964.

Investments of countries other than the United States and Britain reached a record total of \$2,448,000,000 at the end of 1964. Exceeding three times the 1954 figure, this represented a much higher rate of increase than had occurred in either United States or British investments, and large increases had taken place in portfolio holdings of securities as well as in direct investments. At about 9 p.c. of the total, compared with 6 p.c. in 1954, this group of countries, mostly in Western Europe, accounted for a slightly smaller proportion of total foreign investments than in 1960, 1961 and 1962. Over 90 p.c. of the direct investments, which totalled \$1,044,000,000 in 1964, also came from Western Europe; about one quarter was of Netherlands origin, with Belgian, French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1953 both the net use of foreign resources and direct foreign financing amounted to about one seventh of net capital formation in Canada. But from 1958 to 1961 when these ratios had increased considerably to 34 p.c. and 47 p.c., respectively, they were still less than the corresponding ratios in the 1929 to 1930 period when inter-war investment activity was at its highest point. In that shorter period more than one half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. After 1961 these ratios declined somewhat; from 1962 to 1965 the net use of foreign resources comprised 19 p.c. of net capital formation in Canada and direct foreign financing 43 p.c. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing

predominate such as in merchandising, agriculture, housing, public utilities and other forms of social capital. Thus, non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1963 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 54 p.c. owned by non-residents but capital subject to foreign control was 60 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as the end of 1954. In the field of petroleum and natural gas, non-resident ownership and control amounted to 64 p.c. and 74 p.c., respectively, at the end of 1963, whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 62 p.c. and 59 p.c., respectively, compared with 53 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence, non-resident ownership in a broad range of business activity, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 35 p.c. in 1963. But, in the same years, companies subject to non-resident control increased from 25 p.c. to 34 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled by non-residents. The enterprises having an investment in Canada of \$1,000,000 or more accounted for about 40 p.c. of Canadian manufacturing production in 1961 and 29 p.c. of employment in that field. About 33 p.c. of Canadian manufacturing production and 22 p.c. of employment originated with United States-controlled plants. These ratios in United States-controlled plants were considerably higher than in 1953—the previous year for which a study of this kind was made. In some industries the proportions of production and employment in plants controlled by non-residents were much higher than this. Automobiles, for example, are mainly produced in United States-controlled plants, but this is exceptional. Other industries in which well over one half of the production is in non-resident-controlled firms include the smelting and refining of non-ferrous metals, petroleum refining, motor vehicle parts, aircraft and parts, and industrial chemicals. In several major industries like fruit and vegetable canning and preserving, and miscellaneous machinery and equipment manufacturing the distribution of control between Canadian and foreign-controlled companies is more even. In such industries as pulp and paper mills and miscellaneous food manufacturing, the non-resident share is large although less than one half of the total.

There are, however, many industries where the largest part of production is in Canadian-controlled plants. Prominent among these are such important branches of industry as iron and steel mills, sawmills, feed manufacturing, clothing, and such divisions of the food and beverage group as bakeries, slaughtering and meat packing plants, pasteurizing and butter and cheese plants.

## 21.—Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1945-64

NOTE.—Totals are rounded and may not represent the sum of their components.

<sup>1</sup> Includes some investments held for residents of other countries.<sup>2</sup> Includes \$273,000,000 of Columbia River Treaty receipts.

**Canadian Assets Abroad.**—Although there has been a great growth in non-resident investment in Canada and in the balance of indebtedness of other countries, it will be noted that Canadian assets abroad, shown in Tables 21, 24 and 25, have continued to rise in value. These now equal a larger proportion of liabilities abroad than was the case before World War II, but more than one quarter of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the war and early postwar years. At the end of 1964 the government credits outstanding had a value of \$1,517,000,000 while official holdings of exchange and Canada's net IMF position amounted to some \$3,100,000,000 in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank for Reconstruction and Development, the International Development Association and the International Finance Corporation which, by March 1965, amounted to \$80,500,000, \$40,700,000 and \$3,500,000, respectively; these were partly offset by liabilities to these institutions.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1964 were made up of direct investments of \$3,356,000,000 and portfolio investments of \$1,932,000,000. About two thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields, among which the beverage and farm implement industries are particularly noteworthy.

Private investments in overseas countries are widely distributed. Somewhat more than one half of the total in 1964 were located in Commonwealth countries, with slightly more in Britain than in the remainder of the Commonwealth. Most of the direct investments in Britain were in industry, while in other Commonwealth countries investments in mining were of almost equal importance with those in industry. In foreign overseas countries the largest part was in the countries of Latin America where Canadian holdings in public utilities are substantial.

#### 24.—Canadian Long-Term Investments Abroad, 1949-64

NOTE.—Excludes investments of insurance companies and banks (held mainly against liabilities to non-residents), Canada's subscriptions to international investment agencies, and miscellaneous investments (Table 21). Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

## Section 6.—Government Economic Planning Agencies

## Subsection 1.—The Economic Council of Canada

The Economic Council of Canada, a Crown corporation established by Act of Parliament (SC 1963, c. 11) assented to on Aug. 2, 1963, is an independent economic advisory body with broad terms of reference. Its research, analysis and recommendations on a wide range of economic and social matters are designed to help governments and private groups in developing their own longer-term plans, programs and policies. The Council consists of 28 members appointed by the Governor in Council. Included are a chairman and two directors who serve on a full-time basis in their capacity as professional economists, and 25 part-time members who are representative of industry, labour, finance and commerce, agriculture and of other primary industries, and the general public. There are no officials or representatives of government among its members and the Council has no executive or administrative functions.

The central features of the Council's duties are "to advise and recommend . . . how Canada can achieve the highest possible levels of employment and efficient production in order that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to recommend what government policies . . . will best help to realize the potentialities of growth of the economy; to consider means of strengthening and improving Canada's international financial and trade position; . . . to study how national economic policies can best foster the balanced economic development of all areas of Canada . . .". Such duties, and others stated in the Act, encompass the basic economic and social goals that have come to be widely accepted in all modern states. These aims usually are briefly stated as full employment, a high rate of economic growth, reasonable stability of prices, a viable balance of payments, and an equitable distribution of rising incomes. Since the Second World War, in a period of accelerating change, the consistent and simultaneous achievement of such objectives has become a major preoccupation of public policy. An increasing number of countries have sought to develop special procedures and machinery to facilitate the attainment of such goals. The creation of the Economic Council of Canada is a part of this development.

In its *First Annual Review*\* the Council stated its underlying philosophy of approach in this way:—

"We are concerned not with the question of inventing new forms of intervention, but rather with ordering and developing our policies and social programmes in a rational and coherent manner designed to accomplish consistently what the society has declared to be its economic and social goals. For this purpose it is essential to bring to bear the needs of the future on the decisions of today. This applies not only to decisions by governments but also to decisions in the private sector of the economy."

\* Economic Council of Canada, *First Annual Review: Economic Goals for Canada to 1970*. Queen's Printer, Ottawa, December 1964. \$3.50 (Catalogue No. EC 21-1/1964).

In examining the potentialities of the Canadian economy to 1970, the Council in its *First Annual Review* said that the most striking single feature is the tremendous increase in Canada's labour force. The rate of increase in the 1965-70 period is expected to average 2.6 p.c. a year—a rate several times that anticipated in most European countries and well over that in prospect for the United States. Numerically, the Canadian increase would total about 1,000,000 workers in the 1965-70 period. This tremendous labour force growth was considered by the Council in the light of the goal of full employment. In no country does this goal mean that everyone in the labour force must be employed; there is always some voluntary unemployment as well as some that is unavoidable as workers move from one job to another. The Council concluded that 3 p.c. unemployment as an average annual rate would be a practical, realistic objective to be aimed at over the remainder of the 1960s, although it stressed that improved manpower policies (including better labour mobility and higher levels of education and skills) would make it possible to aim at a higher employment potential over the longer term. To attain the "full employment" objective in the face of the large labour force increase, Canada would require a net addition of 1,500,000 jobs in the seven-year period ending in 1970. This is approximately the same gain in total employment that occurred over the previous 14 years.

The Council also placed strong emphasis on increased efficiency—on sustained advances in productivity, which are the essence of economic growth and the real source of improvements in average living standards. Basing its judgment on postwar trends, the Council estimated that, with a reduction of the degree of slack existing in the economy in 1963, output per person employed would increase at an average rate of 2.4 p.c. a year over the period to 1970. This productivity potential was combined with the very rapid rate of expansion required in employment, averaging approximately 3 p.c. a year to 1970, to indicate a potential average rate of growth of output of 5.5 p.c. a year in real terms—that is, in terms of volume, after adjustment for price changes. The Council emphasized that its calculations of potential output to 1970 did not represent forecasts of anticipated trends but rather reasoned appraisals of consistent possibilities for the future. The achievement of such an average annual rate over the whole 1963-70 period would mean an aggregate increase of 50 p.c. in total real output and an increase of over 20 p.c. in real per capita income.

Examining the goal of reasonable stability of prices, the Council said that rates of change in prices and costs to 1970 within Canada's flexible market system should be contained within the limits of the range of movements over the decade from 1953 to 1963. Over this decade, for example, the average annual increases in consumer prices and in prices of all goods and services produced in Canada were 1.4 p.c. and 2.0 p.c., respectively, with some moderate year-to-year variations around these rates.

A "viable balance of payments" was taken by the Council to mean not merely the maintenance of a capability for attaining adequate total international receipts to cover international payments, but also to mean a strengthening of Canada's international economic position in the sense that the possible current account payments deficit (which might be of the order of \$1,500,000,000 to \$2,000,000,000 at potential output in 1970) would be lower in relation to total output (and also that the corresponding net capital inflow would be smaller in relation to domestic investment) than has been the case under comparable past conditions of rapidly rising domestic activity. In short, such a performance would call for some improvement in the basic competitive posture of the Canadian economy.

To meet its interrelated goals and targets, the Council called for an appropriate combination of expansionary measures and policies in the fiscal, monetary and trade fields. In particular, the achievement of its goals would require Canada to participate fully in the new possibilities for an expansion of world trade. There was also a requirement for more adequate measures to facilitate the necessary mobility of productive resources from declining to expanding situations within a rapidly changing economy.

## Economic Performance in Relation to Goals

The goals and objectives originally set by the Council have been reviewed in two subsequent *Annual Reviews*.<sup>\*</sup> Although some of the underlying projections in setting these goals were altered slightly by actual developments in the intervening period, the Council believed that as of early 1967 the over-all goals were still valid as standards for measuring many aspects of Canadian economic performance. In its *Fourth Annual Review*, to be published in the fall of 1967, the Council will examine potential output to 1975, and project likely population and labour force changes to 1980.

In its *Third Annual Review*, published in the fall of 1966, the Council said that, while the economy could move slightly away from several of its goals in the near-term future, the underlying situation still displayed indications of sufficient basic strength and balance to make it unlikely that the country faced the danger of a prolonged or major departure from the goals. The gap between actual and potential output had been virtually eliminated by early 1966. The pace of expansion subsequently moderated, bringing about a more comfortable balance between total demand and supply. However, the Council said that over-all demand forces could re-emerge strongly after a relatively brief interval and, with little or no slack left in the economy, the situation could become one of greater exposure to the dangers of general price and cost increases in the latter half of the 1960s than earlier.

**Production.**—Total output in Canada forged ahead strongly through 1963, 1964, 1965 and the early part of 1966. The economy achieved an average annual rate of growth of over 6 p.c. a year in the volume of total output during that period. Despite the subsequent moderation in this rapid growth rate, the Council emphasized that the potential for further sturdy growth of output was relatively high for the medium-term future. An average annual rate of increase in the total volume of output of close to 5 p.c. from 1966 to 1970 was estimated to be required to attain potential output by the end of the decade.

**Employment.**—In less than four years, from early 1963 to the latter part of 1966, there was an expansion of close to 1,000,000 jobs in Canada. This was a larger absolute increase than occurred in the whole of the 1950s. Unemployment declined from 5½ p.c. in 1963 to less than 4 p.c. toward the end of 1966. Meanwhile, the labour force grew very rapidly and a further increase of 10 p.c. was envisaged by the Council for the 1966-70 period, implying a need for about 750,000 additional jobs over the four-year period. In these circumstances, the Council observed, unemployment could re-emerge very strongly and very quickly if a reasonably strong growth in total demand and output were not maintained over the remainder of the decade.

**Prices and Costs.**—Throughout the world there has been a general and widespread pattern of price increases in recent years. In Canada, consumer prices rose at an average annual rate of about 2.1 p.c. from 1963 to 1965, then accelerated at a rate of close to 4 p.c. a year in 1966. Within the over-all index, the rate of increase in food prices was about double that of consumer services and more than triple that of non-food commodities in 1966. Although food accounts for only about 25 p.c. of the market "basket" used in compiling the over-all index, price increases in the food component accounted for close to one half of the increase in the total index over 1966. Meanwhile, labour costs per unit of output in Canadian manufacturing moved up slightly, relative to those in the United States. In Canada these costs in 1966 were back to the 1960 level. In both countries such costs were less than 5 p.c. above their 1953 levels, however. This contrasts with considerable increases in most other industrially advanced countries. If Canadian unit labour costs in manufacturing are adjusted for the devaluation of the dollar in the early 1960s, then such costs have fallen substantially relative to U.S. costs. Part of this com-

<sup>\*</sup> Economic Council of Canada, *Second Annual Review: Towards Sustained and Balanced Economic Growth*. Queen's Printer, Ottawa. December 1965. \$2.75 (Catalogue No. EC 21-1/1965). Economic Council of Canada, *Third Annual Review: Prices, Productivity and Employment*. Queen's Printer, Ottawa. November 1966. \$2.75 (Catalogue No. EC 21-1/1966).

petitive advantage still remained in 1966, although it has been eroded somewhat by developments since 1964. Surveying increases in basic wage rates over 1966, the Council found that they had been more rapid than at any time in the past decade. Higher costs therefore would continue to work their way through the Canadian economic system for some time. Thus, regardless of underlying economic conditions, it appeared to be inevitable that further significant increases in many lagging prices and costs would continue in Canada in the near-term future.

**Productivity.**—If anything, the rate of increase in Canadian productivity has tended to slow down in recent years. In setting its 1963-70 goals, the Council drew on historical experience that indicated that the economy would achieve an especially rapid rise in non-farm productivity as the gap between actual and potential output was closed. The rise that actually occurred in the 1963-66 period did not measure up fully to the Council's expectations. Nevertheless, the rise in non-farm productivity since 1963 was well above the performance of the late 1950s and also well above the long historical trend. The need in Canada for even greater increases has been emphasized repeatedly by the Council. Gains in productivity are the real basis of increases in the standard of living.

**Investment.**—An extraordinarily large rise in new investment took place in Canada in 1963-66. While total economic output over that period rose by about one third in value and one fifth in volume, total investment spending rose nearly two thirds in value and over two fifths in volume. This expansion took place over a very broad front of new machinery and equipment, business non-residential construction, and government social capital spending. But, despite this, the growth in Canada's productive capacity seems to have been less than the growth in the volume of output. In addition, by 1966, demand pressures on productive resources and capacity created particularly severe strains in the construction industry, especially in certain regions and localities, and this led to worsening bottlenecks and to escalating wage and cost pressures.

### Prosperity and Price Stability

The Canadian experience in the prolonged expansion that began in 1961 serves well to illustrate one of the major, recurrent difficulties faced by modern industrial nations in the postwar period—namely that of achieving reasonable price stability in periods of high growth and rapid gains in employment. In general, the leading nations have demonstrated far better performance in this respect over the past 15 years than in the inter-war period. Much of this improvement can be attributed to a better public understanding of the broad forces at work within modern economies, and to better use of the policies capable of influencing these forces. In particular, there has been a growing appreciation of the importance of total supply and demand within economies and of the role of the "big levers" of fiscal and monetary policy in affecting these aggregates. It is realized that severe inflation is brought about fundamentally by excessive pressure of total demand for goods and services on the available supply, while heavy unemployment is the result of large relative deficiency in demand. It is known that the principal remedy for both of these extreme conditions is the operation of fiscal and monetary policy to restrain or stimulate the growth of total demand as the case may be, and bring it back into a proper relationship with the growth of potential output.

In 1965, the Government of Canada requested the Economic Council to launch a broad examination into prices, costs, incomes and productivity, and their relationship to sustained economic growth. Specifically, the Council was requested to (1) study factors affecting price determination and the interrelation between movements in prices and costs and levels of productivity and income; (2) to report on the relationship to sustained economic growth and to the achievement of high levels of employment and trade and rising standards of living; and (3) to review the policies and experiences of other countries in this field and their relevance for Canada. A substantial part of the Council's *Third Annual Review* was devoted to its report on these matters.

In attempting to reconcile the goals of high employment and reasonable price stability, many countries have adopted what are known as "incomes policies" or "wage-price guidelines". The ways in which these policies and other measures were developed and used in the United States, Britain, France, Sweden and the Netherlands were studied at length by the Council. In general, the Council found that these policies—which in many cases relate permissible price increases to recent levels of productivity—had some educational value but were seldom enforceable without the use or threatened use of government sanctions against parties who violate the guidelines. The effect of such policies was extremely difficult to measure. The Council's study indicated that once an economy is operating at high levels of demand and employment, wage and price increases tend to break through whatever guidelines have been established. Wage-price explosions have often followed periods of comparative stability attributed to incomes policies.

The Council concluded that this type of policy is not well suited to Canadian circumstances. An incomes policy would have the best chance of success in a unitary state, with strong central powers, a tradition of government intervention in the detailed functioning of the economy, and few constitutional impediments to government use of direct controls if necessary; private economic power would be relatively concentrated, and both union and management organizations would be strong and centralized. Obviously, Canada is far indeed from being such an environment. The threat of resort to direct wage and price controls as sanctions would be a hollow threat in Canada; the Federal Government has not now the power to institute such controls in major areas of the economy and in practice has been able to get such constitutional power only in wartime. In addition, regional differences hardly favour such a policy in Canada. Another factor weighing against such a policy is Canada's increasing economic interdependence. Price-increasing developments in international markets—where prices for a wide range of Canadian products are determined—might be bringing about rapid rises in profits and incomes in a number of primary exporting industries, and little could be done about it except to explain to the public why the situation must be tolerated.

The main thrust of the Council's recommendations, therefore, was along the lines of improving the use of basic monetary and fiscal policies, better planning of government expenditures and programs, lessening market rigidities, strengthening competitiveness, promoting greater mobility of resources, including manpower, removing inequities and enlarging public understanding of all these matters. Said the Council: "We feel that for all their troubles and imperfections—for all the static and turbulence which they periodically generate—the essentials of the institutions of free collective bargaining and of flexible and relatively decentralized determination of wages and prices should be preserved. In the long run, they seem likely to be more compatible with good all-round performance by the Canadian economy than any visible alternative."

The Council found that, in the past, Canada's use of fiscal and monetary policies has often been too closely geared to minor, short-term economic fluctuations. They could be used more effectively to stabilize larger economic fluctuations over longer periods—to moderate prolonged pressure against resources, or reduced persistent economic slack. Within this setting, the Council added, further conditions are vital—favourable international conditions, a correct setting of the exchange rate, and adequate complementary policies to improve the supply side of the Canadian economy. The Council found that up to now there has been a relative neglect in Canada of policies to increase supply, both in general and in areas of particular pressures.

One of the main problem areas detected by the Council was that of construction spending. In the postwar period, such spending has shown a special and unique potential for aggravating or even inducing economic instabilities, with consequent repercussions on general costs and prices. Over the past 15 years demand for construction in Canada has swung widely—residential building from a 25-p.c. increase in one year to a 17-p.c. decline two years later, non-residential construction from plus 40 p.c. to minus 9 p.c. over two years, and government construction outlays from plus 32 p.c. to minus 7 p.c. from one year to

the next. The Council said governments must be assigned a major contributing role as a destabilizing element in the over-all construction situation. In all three construction booms since 1950, outlays by all levels of government have reinforced and aggravated the excessive demand on the construction industry. Moreover, in the three recessions since 1950, government construction outlays have declined, adding to the weakness of demand in other sectors of the economy. In the 1963-66 period, demands on the construction industry pressed very hard on its supply capacity. The result was sharply higher wages in construction, strong increases in building materials prices, sharply higher bid prices on new contracts, increases in costs and prices on projects already under way, and fewer bids per construction contract. In such a situation, cost and price increases spill over into a broad front of labour and material resources.

The Council said that, to help stabilize construction demand, it would be appropriate to press for the development of business attitudes encouraging longer-term planning of business investment expenditures. However, the Council also strongly recommended steps to smooth out the growth of government-determined construction. This recommendation applied to all levels of government but the Council believed that the leadership must come from the Federal Government. The Council said that much of the need for government construction is foreseeable for some years ahead and there is room for better government planning and scheduling of such projects in relation to medium-term economic prospects and the likely demand-supply situation in the construction industry in key areas. Within the Federal Government itself, the Council saw a need for greater centralization of information and decision-making about construction expenditures.

The following were among the Council's other conclusions in this area:—

In the interests of better public education and information regarding current economic developments, including those in the field of prices, costs and incomes, steps should be taken to establish an independent institute of economic research along the lines of those already existing in many other countries. A major function of such an institute would be the publication of a regular bulletin containing analysis of short-term developments in the Canadian economy and other articles dealing with significant changes and problems.

A further examination is needed of problems of consumer protection and the exercise of market power in the Canadian economy. The emphasis should be on a consistent and continuous set of policies, based on well-founded and well-understood principles. (The Federal Government recently referred these matters to the Council for special study. The terms of reference are: "In the light of the government's long-term economic objectives, to study and advise regarding (a) the interests of the consumer particularly as they relate to the functions of the Department of the Registrar General; (b) combines, mergers, monopolies and restraint of trade; (c) patents, trademarks, copyrights and registered industrial designs". The Council's work on this special study was well under way in the early part of 1967.)

Much more basic economic research needs to be done on problems relating to prices, costs, incomes and productivity in the Canadian economy. More adequate resources should be made available for these and other areas of economic research. In addition, there is a general and immediate need for improvements in price and other economic statistics. For this purpose, the Dominion Bureau of Statistics should be substantially strengthened.

In the light of underlying factors which have significantly altered the world and the Canadian food situation, and some of which are likely to continue for some time, it is more than ever important that effective measures be taken to increase productivity at all stages of food production and distribution.

Governments should take immediate steps to improve the discharge of their responsibilities as major employers and increasingly large-scale direct participants in the process of collective bargaining. The object should be to develop sound criteria and principles and to avoid disturbing repercussions on the climate of collective bargaining in the private sector of the economy.

Programs for productivity improvement and adequate measures for dealing with the manpower problems arising from technological and other change should be pressed ahead with all possible speed. The programs should operate both at the general and at the

industry and plant level. (In early 1967, the Council published a set of principles to guide labour and management in their efforts to cope with the manpower implication of technological and other changes in industry [see below].)

The annual autumn meetings between federal and provincial finance ministers and treasurers should be developed into a major vehicle for the improvement of longer-term planning and the better co-ordination of expenditure programs and other fiscal matters by the three levels of government. A number of basic economic documents should be published prior to such meetings to serve not only as background for them but also as a basis for stimulating broader public debate about economic developments, problems and potentialities in advance of the formulation of annual budget policies. A standing committee on economic affairs from the Senate and the House of Commons should be established, one of whose functions would be to hold annual hearings on economic issues arising out of the above-mentioned documentation and discussion.

## Education and Economic Growth

The basic role of education as a factor contributing to economic growth and rising living standards was stressed in the Council's *First Annual Review*, especially in the discussion of Canada's vital need for creating and maintaining an adequate supply of professional, technical, managerial and other highly skilled manpower as a basis for future growth. The *Second Annual Review* attempted a closer examination of education as a factor in growth. The Council recognized that its work in this difficult area was in the nature of a pioneering venture, but considered it useful to make some initial findings and conclusions:—

Average years of education per person in the male labour force rose rapidly and fairly steadily from 1910 to 1960 in the United States, with gains of 9 to 10 p.c. in each decade over that half century. The Canadian increases were somewhat more uneven and were also consistently below those in the United States. Consequently, it is estimated that although average years of schooling increased by less than 40 p.c. in Canada, the comparable increase in the United States was about 60 p.c. There has thus been a widening educational gap between the two countries. This gap appears to have widened particularly at the secondary school level in the inter-war years, and particularly at the university level in the postwar period. For example, in 1960 about 45 p.c. of the United States male labour force had four years of high school or more education, compared with only 24 p.c. in Canada in 1961.

The Council estimated that the Canada-U.S. differences in the average educational attainments of their respective labour forces account for approximately one third of the difference in productivity between the two countries. The Council's analysis also suggested a strong relationship between individual income levels and educational attainments. For example, in Canada the average income of those who have completed four to five years high school is more than one and a half times the average of those who have only elementary school education; and those who have university degrees have an average income which is more than two and a half times the average of those with only elementary school education, and more than twice the average of those who have only one to three years of high school.

A rough estimate of the 'profitability' of education can be made by calculating the extra income which on average is associated with a higher level of education, against the extra outlays and costs involved in obtaining such an education. On the basis of such calculations, it was estimated that returns on the 'human investment' in high school and university education in Canada are in the range of 15 to 20 p.c. a year. This is a somewhat higher rate of return than has been calculated for the United States.

The benefits from increased education, according to certain calculations and assumptions, are estimated to have accounted for a share in the general order of one quarter of the increase both in the average standard of living and in the productivity of Canadians from 1911 to 1961. Although this is a large contribution, it is apparently substantially lower than that indicated in comparable estimates for the United States.

Canada now faces a general shortage of manpower with higher educational attainments. The shortages extend from the high school level on up, and are most severe at the professional and university level. These deficiencies in the supply of skills constitute one of the major obstacles to be overcome in achieving a satisfactory rate of improvement in productivity and of economic growth in Canada.

The future benefits from increased efforts in education are very large, and the economic returns to the nation from increased investment in education are likely to exceed by a considerable margin those from most other types of expenditure. This economic gain is complementary to the contribution of education to the human, social and cultural development of individuals.

In the light of these findings, the Council recommended that the advancement of education at all levels be given a very high place in Canadian public policy, and that investment in education be accorded the highest rank in the scale of priorities. In particular, the Council urged that immediate attention be given to:—

- (1) The rapid and substantial expansion of post-secondary education in all parts of Canada. The aim should be to provide a ready opportunity for higher education to every qualified Canadian student so that financial obstacles will be eliminated as a barrier to higher education. A substantial increase in funds for research is a necessary feature of expanded and improved education at the higher levels.
- (2) The closing of the remaining gaps in school facilities and professional resources at the secondary school level so that such education is a real and practical possibility for all Canadian children.
- (3) The development and implementation of greatly expanded programs to upgrade and bring up to date the education and skill qualifications of the existing labour force, including professional workers and management. Continuing education and retraining must play an ever-increasing role in the future.
- (4) Social and other measures to reduce drop-outs in high school to achieve a much higher rate of high school completions.
- (5) Vigorous efforts through research, the use of new techniques, and upgrading the qualifications of teachers to improve the quality and methods of education.
- (6) Closer co-operation between business, labour and the educational system, along with improved counselling of students, regarding future manpower needs and the most effective ways of meeting these needs.

### Regional Growth and Disparities

The problem of assuring an appropriate participation on the part of each region in the over-all process of national economic development has long been an elusive goal and a continuing concern of the people of Canada. The Council's analysis showed that over the past four decades there has been relatively little progress toward the achievement of a better balance in this respect. Despite various policies and programs, very wide disparities have continued to exist in average per capita income. Also, there have continued to be wide differences in the extent to which the human and material resources of each region have found opportunities for productive use. While national prosperity has always tended to have a favourable influence everywhere, rapid national growth has not by itself served to bring about any significant or lasting reduction in these large and stubborn differences.

Regional levels of personal income per capita (in current dollars) are shown for three selected groups of years in the following statement. Provinces are ranked in order of level of income in 1963 and the data are for three-year averages centred on the year shown.

<i>Province</i>	<i>1927</i>	<i>1947</i>	<i>1963</i>
	<i>\$</i>	<i>\$</i>	<i>\$</i>
Ontario.....	509	981	2,025
British Columbia (incl. the Yukon and Northwest Territories).....	535	980	1,966
Alberta.....	509	923	1,750
Saskatchewan.....	449	818	1,749
Manitoba.....	455	875	1,721
Quebec.....	378	709	1,521
Nova Scotia.....	299	676	1,302
New Brunswick.....	277	609	1,167
Prince Edward Island.....	248	477	1,115
Newfoundland.....	...	...	1,009
PROVINCIAL AVERAGE.....	407	783	1,532

The most striking features of the above comparisons are the substantial percentage difference in income levels between the highest and lowest province and the fact that the rankings of the provinces in terms of income levels have hardly changed over a period of almost 40 years.

The Council concluded that efforts to promote more regionally balanced growth should be aimed at achieving a more rapid increase in the incomes of the lagging regions by methods which do not retard the development of the faster-growing areas of the country. In this way the economic growth of the national economy would be improved for the benefit of all regions in Canada. The Council said that, in order to accomplish this result, it is essential that regional development policies be directed to two basic objectives—the increase of opportunities for high-productivity employment and the acceleration of programs which can make the maximum contribution to improvements in productivity generally in the region. The Council suggested the following guidelines for action:—

- (1) the avoidance, as far as possible, of subsidies merely to create temporary activity or to sustain indefinitely low-productivity industries and declining occupations;
- (2) encouragement of efficient agglomerations of activity—growth centres—within the different regions in order to achieve increasing economies of scale, larger markets and more useful pools of skills, and to avoid uneconomic scatter and dispersion;
- (3) the taking of decisions in respect of investments in social capital in accordance with an adequate consideration of the economic and social benefits to be obtained in relation to costs;
- (4) the recognition of the urgent need to make available additional financial resources to the governments of the lower-income regions and through the appropriate federal agencies in order to help break the vicious circle of low productivity, low incomes, low government revenues and low investments in growth-promoting services which are needed to improve the quality and effective utilization of the available human and material resources—in particular, education, training, research, health, transport facilities, resource and industrial development and the development of wider markets;
- (5) the necessity for close co-ordination in the formulation and implementation of consistent regional development policies and programs among all levels of government; this is particularly important in view of the wide range of programs and policies affecting regional development, both on the part of the provinces and through certain federal agencies such as the Atlantic Development Board, the Area Development Agency and the Agricultural and Rural Development Administration; and
- (6) the avoidance of self-defeating restrictive and divisive measures which interfere with the free flow of goods, capital, labour and enterprise between all the provinces; such measures must be avoided if we are to achieve simultaneously the twin goals of more satisfactory growth in every region and a rapid expansion of the national economy from which all would benefit.

The Council observed: "It is clear that the narrowing of inter-regional income disparities and the achievement of a more regionally balanced economic growth involve large, urgent, and especially challenging tasks. Many decades of experience have shown that these tasks cannot be accomplished by piecemeal expenditures, superficial expedients, unproductive works and mere transfers of income. The appropriate policies and programmes will need to be formulated within a long-run consistent framework and carried out with a continuing regard for the real and underlying problems involved."

In its *Third Annual Review*, the Council looked at the economic performance of the various regions during the general expansion that began in 1961. It found that the benefits of this long and vigorous advance were quite widely diffused throughout the country. All regions participated in the growth of income and the rise in living standards, and achieved rates of increase on a per capita basis considerably higher than their long-term historical experience. The growth in employment and the reduction in unemployment was widespread. The capital investment boom was extended to all regions and a substantial expansion of provincial-municipal services was accomplished. Of particular interest was some tentative evidence of inter-regional convergence in earnings per employed person, implying, as it does, some moderation in the wide differences in productivity levels among the major regions. It is clear, nevertheless, that the inherent diversity of the country has made for widely different patterns and an uneven pace of development among the various regions. Briefly stated, the strongest and most diversified gains were achieved in the two highest-income regions, Ontario and British Columbia, where broadly based expansion in total income and employment enabled these provinces to maintain a substantial lead over the remainder of the country.

### Problems of Northern Development

The North embraces a vast, sparsely settled area and presents special economic and physical characteristics, all of which suggest that a separate study of the area is required. The Council hopes by means of future studies to explore ways for effectively promoting development in the North in a manner that will enhance over-all national growth.

In the summer of 1966, members of the Economic Council, at the invitation of the Minister of Indian Affairs and Northern Development, visited several centres in the North. This hurried trip could not be expected to provide time for searching inquiries into conditions and prospects in such a far-flung and difficult frontier area. But the Council came away with certain distinct impressions:—

"It is apparent, first, that while it is customary to speak of the North as a vast single region of severe climate, empty distance, and harsh geography, it is in fact an area of very considerable diversity. It comprises a significant number of different regions, or sub-regions, marked by quite diverse geographic and climatic conditions, possessing varying potentials, facing differing problems, and entering into different stages of economic and social development. Any over-all policy for developing the North must necessarily take adequate account of this diversity, and selective programmes must be adapted to the particular needs and prospects of the varied subregions.

"A second distinct impression is that while the land is vast, virtually unpopulated, and forbidding in many aspects, it undoubtedly possesses significant resources. True, the importance of renewable resources of agricultural land and forests is very limited. But there is no question of the presence of rich and varied mineral resources, including iron, base metals, industrial minerals and fuels. A number of important deposits have already been successfully brought into production; others have been located and are being tested; and the probability is great that further exploration and investigation will continue to yield new and important finds. The whole process of discovery would be stepped up by increased research and the further development and application of new techniques for exploration.

"The longer-run development of the North depends essentially upon the success achieved in the economic exploitation and use of these mineral resources. In this regard it seems clear that some subregions are now approaching the stage of commercial utilization much more rapidly than others. This is generally true of the Yukon and parts of the Western Arctic, not only because more is known as to the existence and quality of resources in these places, but also because difficulties of access, transportation and climate are less formidable than in other areas.

"Even for the more favoured subregions of the North, however, there are two major obstacles to be overcome. The first is the problem of providing transportation and of undertaking the very large capital investments involved in the building of the transport facilities needed to move heavy, primary commodities over long distances to potential markets. The steady extension of such transport links, probably pushing up through the northern reaches of some of the provinces, may well be expected; but careful, long-run national planning will be essential to ensure the best use of available funds and to avoid potentially costly errors. The second problem is equally important. It will require imaginative approaches and special efforts to deal with the particular difficulties of living and working on a permanent basis under northern conditions. This is not just a matter of overcoming a relatively inhospitable climate and supplying the conventional amenities, but even more of providing the kinds of advanced services and the social environment which will help to alleviate a sense of isolation from the advantages of modern urban life. Unless these difficulties can be resolved, it is hard to see how the human resources and human skills necessary for productive development can be attracted and successfully held in the new communities of the North.

"Finally, no visitor to the North can help but be seized by the serious plight of the native people. Whatever the reasons, the impact of modern civilization upon the culture and way of life of the Eskimo and northern Indians has been sudden, drastic and disruptive. Their problem today is both difficult and urgent. The need to improve their economic and social condition, and at the same time to assure them of a rightful participation in the future development of the North, constitutes a pressing challenge to the people of Canada today."

### Labour-Management Relations

The Act establishing the Council also directs it to "encourage maximum consultation and co-operation between labour and management", and to "foster and promote the maintenance of good human relations in industry". In carrying out this function, the Council has convened two national conferences on labour-management relations. The first, held at Ottawa in November 1964, dealt with the state of labour-management co-operation in

Canada generally, and experiments and developments in labour-management co-operation in the United States and a number of European countries, and their relevance for Canada. Discussion at the conference was based primarily on research papers commissioned by the Council. One of the major conclusions of this conference, attended by a widely representative group of business and labour leaders as well as labour relations specialists from governments and universities, was that the complex problems arising from rapid economic change—including technological change—cannot be dealt with adequately by labour and management in the crisis atmosphere of periodic collective bargaining. There was a feeling that existing labour legislation in Canada too often tends to encourage such crisis bargaining, thus inhibiting and frustrating the development of more continuous discussions in co-operative relations needed to deal with the problems of adjustment. The conference also concluded that future meetings of this kind should deal with specific subjects. One of the topics suggested for future conferences was that of the problem of adjustment to technological change.

After considerable study, the Council—itself broadly representative of labour and management as well as of the general public—published in January 1967 a set of principles to guide labour and management in this particular area. The document, "A Declaration on Manpower Adjustments to Technological and Other Change",\* was submitted to a Second National Conference on Labour-Management Relations in Ottawa in March. One of the fundamental points made in this declaration was the need to provide information as early as possible about anticipated change in industry and its manpower implications. The Council regarded this as basic and preliminary to the carrying out of any program of manpower adjustment. The Council said that, although it is impossible to stipulate for all industrial situations what the period of advanced notice should be since so many varying factors are involved, there should be as much advance notice as possible, with a minimum of not less than three months where changes of material significance are involved. Although it may be difficult to apply such minimum advance notice to change arising from a sudden curtailment in the production of an enterprise due to market conditions, it should definitely apply to all changes, with manpower implications, resulting from technological innovations or changes in production or administration methods. The declaration then went on to suggest several steps that could be taken jointly by labour and management to facilitate the adjustment of members of the work force who are directly or indirectly affected by such changes. These steps would include the planned use of attrition, transfer to other jobs, training and retraining, provisions to improve the portability of pension rights, and—where none of these steps prove workable—financial measures to ease the impact of the employee separation. The Council observed that unless these problems arising out of continuous change can be solved, tensions between labour and management inevitably will increase. The Council was hopeful that the declaration would make a significant contribution to the solution of problems in this difficult area and would also contribute significantly to an improvement in the industrial relations climate in Canada.

### Subsection 2.—The Atlantic Development Board

The persistence of the problems of slow growth and low income in the Atlantic region compared with the remainder of Canada has long been of concern to the Federal Government as well as to the governments of the Atlantic Provinces. Policies and programs introduced over the years in an effort to better economic conditions were not entirely successful for various reasons and recently it became imperative that new solutions should be sought and the traditional patterns of economic activity in this area modified. Among the changed approaches was the establishment by the Federal Government of the Atlantic Development Board in 1962 (SC 1962-63, c. 10, as amended by SC 1963, c. 5).

The Board incorporates three essential principles in regional economic development: joint and closely co-ordinated development of programs with the governments of the

\* Economic Council of Canada, *A Declaration on Manpower Adjustments to Technological and Other Change*. Queen's Printer, Ottawa. November 1966. \$0.75 (Catalogue No. EC 22-866).

Atlantic Provinces; a concern with the basic structure of the regional economy and with problem causes rather than symptoms; and, where otherwise not available, federal financial assistance for development projects.

The Board is a special agency, distinct from the regular machinery of governments. Its eleven members are appointed for fixed periods from all the Atlantic Provinces and from diverse fields of activity. It thus has the knowledge, the interest and the freedom to pioneer regional development. Headquarters of the Board are in Ottawa and the staff consists of 55 persons of whom about half are professional. The staff is organized into two functional Divisions—the Program Division is concerned with all aspects of Board projects including economic and engineering investigations and the carrying out of the projects themselves; the Planning Division is responsible for, in consultation with the Economic Council of Canada, the preparation of a co-ordinated plan for the promotion of the growth of the Atlantic region. For obvious reasons, the staff works very closely with officials of other departments and agencies. Each province has a regional committee which works with the Board staff on matters relating to that particular province. When projects are approved, the appropriate department or agency is requested to supervise the work and arrange administrative details on the Board's behalf. Ministers or officials from each of the four provincial governments are designated to act as liaison officers with the Board.

Very broadly, the Board's functions are to prepare a co-ordinated plan for the promotion of the economic growth of the Atlantic region and to recommend programs and projects to cope with or mitigate current problems. In carrying out these functions, the Board is acutely conscious of the interdependence of short-run and long-run policies and the need for consistency among them. Economic growth and development, particularly when based on increased industrial activity, require substantial investment in capital facilities for power, transportation, pure water for industrial purposes, and other services. These facilities, commonly referred to as 'infrastructure', are of basic importance and, for this reason, major emphasis has been placed on this type of investment. Since the construction of such facilities could not be financed by the Atlantic Provinces themselves at this time and on the necessary scale, the Federal Government, in July 1963, established a \$100,000,000 Atlantic Development Fund which, along with annual appropriations, will enable the Board to carry out its functions.

By Mar. 31, 1966, projects costing an estimated \$76,706,069 had been approved and expenditures of \$24,501,698 had been made against that amount, leaving outstanding commitments of \$52,204,371. The projects are as follows:—

<i>Project</i>	<i>Expenditure Approved</i>	<i>Funds Disbursed</i>

### Subsection 3.—The Municipal Development and Loan Board

The Act establishing this Board (SC 1963, c. 13) received Royal Assent on Aug. 2, 1963. The Board comprises a chairman and four other members, all senior officials of government, appointed by the Governor in Council, and reports to Parliament through the Minister of Finance. The Board was set up to make loans up to a total amount of \$400,000,000 to municipalities to assist in the construction of additional municipal capital projects, thereby providing increased employment during the period 1963-66. The operations of the Board were therefore envisaged as being temporary and no loans have been made—or could have been made—since Mar. 31, 1966. By that date the Board had approved 2,469 loans to 1,292 separate municipalities across Canada, the total amount of the loans being \$399,250,000. Since loans were limited to two thirds of the project cost, the total amount of construction stimulated by this program was an estimated \$750,000,000. Over one third of the \$400,000,000 loan fund was allotted to help finance municipal water and sewer projects; other types of projects assisted included schools, roads and bridges, rapid transit systems, civic buildings, parks, other recreation facilities, hospitals and municipal power distribution. The program had its greatest impact on construction in the year 1965.

After a municipality obtained a loan commitment from the Board, its normal procedure was to borrow from a bank or to use other forms of pre-financing. When the project was completed and audited, the actual transfer of the loan amount to the municipality took place and forgiveness of 25 p.c. of the loan amount (where applicable) arranged. However, legislation permitted loan advances based on construction progress to be made to some municipalities. By Mar. 31, 1966, final loan payments totalling \$119,000,000 had been made on 718 completed projects, with loan forgiveness amounting to nearly \$30,000,000 being granted. In addition, interim loan advances were made amounting to \$26,500,000 in respect of 125 projects. Thus, although almost the entire \$400,000,000 loan fund was committed to provinces and municipalities by that date, the major portion of the actual loan payments were made or were being made subsequent to that date.

Under the Act, the interest rate to be paid to the Board on these loans was stated to be the effective interest rate on long-term Government of Canada bonds plus not more than one quarter of 1 p.c. In effect, the rates during the period 1963-66 varied between  $5\frac{1}{4}$  p.c. and  $5\frac{3}{8}$  p.c., depending on market conditions at the time. Most loans were for terms of 20 to 30 years, only one being for the maximum permissible maturity of 50 years.

All municipal loan applications were required to be approved by the province concerned before being submitted to the Board. The province concerned was required to certify its approval of the financing and to verify the fact that the project represented additional work over and above the planned capital program of the municipality. Four provinces (Ontario, Quebec, Manitoba and Saskatchewan) chose to deal directly with their own municipalities in respect of most aspects of the program—the province itself made the loan to

the municipality and borrowed the same amount from the Board. The program was administered in Quebec by the Quebec Municipal Commission and by the respective Departments of Municipal Affairs in Ontario, Manitoba and Saskatchewan. In the other provinces the Central Mortgage and Housing Corporation acted on behalf of the Board to receive municipal applications and to provide various advisory services to municipalities.

#### **Subsection 4.—Provincial Government Economic Planning Agencies**

In a number of provinces, economic planning agencies have been set up or are in the formative stage. Only those that are currently active are described here.

#### **The Nova Scotia Voluntary Planning Organization**

During late 1961 and early 1962, the Government of the Province of Nova Scotia concluded that, within its limitations as a provincial government and in keeping with democratic traditions, it could increase the rate of economic growth by undertaking an economic planning program of a voluntary nature. Legislation creating the Voluntary Planning Board was passed in March 1963 by a unanimous vote of the Legislature. The Act stipulates that the Board shall consist of a chairman and a vice-chairman, the number of additional members and their terms of office to be determined by Order in Council. The Act also provides for the appointment of Sector and Segment Committees chosen from appropriate occupations by the Lieutenant-Governor in Council. A Sector is defined as "a primary portion or division of the economy" and a Segment is "a part or sub-division of a sector".

The general function of the Board is to assist and advise the Minister in the development and implementation of measures to increase the rate of economic growth of the province by means of voluntary economic planning. The following specific duties are outlined in the Act:—

- (a) co-ordinate the plans of the various Sectors of the economy and, based on these plans, produce a plan for the whole economy of the province for recommendation to the Minister as one which the Government might adopt;
- (b) collect, collate and disseminate information relative to the economy of the province;
- (c) advise the Government on provincial economic matters;
- (d) watch the performance of the Sectors in carrying out their plans and stimulate and encourage the carrying out of such plans;
- (e) envisage further plans that should be made and provide for continuity of planning for the future, both short- and long-range; and
- (f) conduct or arrange to be conducted such studies and investigations as the Lieutenant-Governor in Council or the Minister requests.

In addition, the Board serves as a liaison between government and people in all economic endeavours.

The Board has published a comprehensive over-all plan for the Nova Scotia economy to 1968 which includes the aims of economic planning and objectives for the first planning period. Detailed Sector plans have been published for agriculture, forestry, tourism, transportation and communications, fisheries, and construction. A special study has been made for the service industries and other studies have been undertaken in conjunction with various Sector plans and the over-all plan.

#### **The Quebec Economic Advisory Council**

An Economic Council was instituted by the Quebec Government in 1943 but it disappeared when the mandate of its members was not renewed at the end of three years, as required by the Act. In 1960, the decision was made to reactivate it under the Act that created it in 1943 and in February 1961 a new Act was passed by the Quebec Legislature establishing the Quebec Economic Advisory Council.

The Council (as at Sept. 1, 1966) is composed of 15 titular members appointed by the Cabinet, which is also authorized to appoint five associate members chosen from among

high officers of the Government. At present, the associate members are the Deputy Ministers of Industry and Commerce, of Agriculture and Colonization, of Natural Resources and of Education and the President of Hydro-Quebec; the associate members attend meetings and take part in discussions but are not entitled to vote. There is also a Management Committee composed of five Advisory Council members, of which the President and the Vice-President are members *ex officio*.

The staff in charge of the administration and the organization of projects, which consists of a general manager and a small group of technical counsellors versed in economic matters, is subject to Civil Service regulations. Its duties consist of extracting the necessary economic syntheses based on fundamental studies made by government departments, boards and other agencies. Analyses of these syntheses are made by committees composed of government representatives, university professors, company heads, etc., and the results are submitted to the Cabinet through the Prime Minister.

Under the Act, the mandate of the Quebec Economic Advisory Council is to organize the province in the economic sphere, foreseeing the most complete utilization of its material and human resources, and to advise the government, upon request or on its own initiative, on all economic questions. The first task is broad and demanding; to elaborate a management plan is to project a complete view of the internal economic trend for a certain number of years, taking into account the correlation of all economic factors, especially population, employment, investments and production. The second task is more of a short-term nature; it consists of giving advice to the government on a particular problem or of suggesting to the Government certain measures dealing with the elaborations of policies.

The first phase of the Council's work was spread over the period 1962-64. Plan elaboration occupied about 15 work groups studying more or less deeply the various sectors of economic activity. The studies brought forward the main difficulties connected with the elaboration and execution of a plan suitable to the needs of the province; the difficulties resulted from lack of personnel, of statistical information and of co-operation between government, management and labour unions; from Quebec's particular economic problems; and from the separation of economic powers between the Government of Quebec and the Federal Government, etc. Since 1964, the Council has instituted deeper studies of five categories of problems leading to the elaboration of: a policy on employment and the labour force; a policy of regional development; a policy on research and productivity; a policy on natural resources; and a policy on public investments.

The Council has fulfilled its task of advising the government by proposing the adoption of measures and the creation of bodies leading to the execution of a future plan. Thus, it recommended to the Cabinet: the establishment of a steel industry; the creation of a General Investment Corporation; the nationalization of power companies; the issuing of Quebec Savings Bonds; the establishment of the Quebec Pension Board; the creation of the Deposits and Investments Fund (*Caisse de dépôts et de placements*); the division of the territory into 10 administrative areas; the recognition of 10 Regional Economic Councils; the creation of a Scientific Research Council; and the establishment of an Industrial Research Centre. Most of the measures recommended by the Council have been adopted by the Government of Quebec.

### **The Ontario Economic Council**

The Ontario Economic Council was established by Order in Council on Feb. 1, 1962. The Council was conceived as a vehicle where representatives of agriculture, labour, management, education, finance and of government could integrate their knowledge and experience of economic affairs, commission research and formulate policy recommendations to the public and private sectors.

Essentially, the Council operates as an advisory body to the Government of Ontario. Some of its findings are reported directly to the government; other reports and recommendations are published and distributed widely. Recent reports cover the fields of tourism, land-use, education, labour and skill-training.

Twenty Ontario citizens serve as members of the Council. Five of these represent a broad cross-section of business and industry, one each from the financial community and the Consumers' Association of Canada, three come from organized labour, three from agriculture, and one from the provincial universities. One member comes from the senior ranks of the Ontario Civil Service. The remaining five are drawn from the Ontario Research Foundation, the Ontario Regional Development Council, The Hydro-Electric Power Commission of Ontario, and the Ontario Northland Railway. Each serves as an individual citizen without compensation. The Council meets monthly in Toronto.

The Council shares the view of the Government of Ontario that the economy of Ontario is not an entity separate from Canada. For this reason the Council does not undertake separately for Ontario what the Economic Council of Canada has done and is doing for Canada as a whole. Projects are undertaken with the Economic Council of Canada on a co-operative basis and information is constantly exchanged between the two Councils.

Another way in which the Ontario Economic Council pursues its responsibilities is through the work of committees. A total of some 40 citizens representing a broad cross-section of the Ontario community make up the following committees: Agriculture, Northern Development, Industrial Development, Industrial Research, and Tourist Industry.

A small permanent Council staff undertakes direct assignments and superintends the design and administration of projects assigned to others. Close contact with government departments avoids unnecessary duplication of effort. Research facilities, academic personnel and graduate students in Ontario universities have been used for certain projects which have included the professional services of members of economics, political science, geography and business administration in the Universities of Windsor, Western Ontario, Toronto, Waterloo, Queen's and York. From time to time the Council engages the professional services of private consulting firms.

### **The Manitoba Economic Consultative Board**

The Manitoba Economic Consultative Board was established under the provisions of the Development Authority Act, 1963, and has been operative since the autumn of that year. It is composed of a chairman and ten members appointed by the Lieutenant-Governor in Council and is representative of the leading elements of the labour and business community. Chairmen of the Manitoba Design Institute, the Manitoba Research Council and the Manitoba Export Corporation serve in an *ex officio* capacity. The Board obtains its funds from the Manitoba Government; its budget in 1965-66 was about \$130,000.

The Board was established as an advisory body to the Manitoba Development Authority, the economic planning and co-ordinating committee of the Executive Council. It is charged with examining Manitoba's long-term prospects for growth, a report on which is published annually and widely distributed. Its staff is involved in an on-going program of research into manpower requirements and long-term economic problems.

Consultation with government, management, agriculture and labour on obstacles to more rapid growth is an integral part of the Board's task. Thus, working with various management groups in the province, the provision of adequate management education programs was examined recently. This led to the formation of the Manitoba Institute of Management Inc., a non-profit private corporation representative of management, educators, labour and government, to provide broad community support for a greatly strengthened program of management education in the province.

Whenever possible the Board co-operates with other provincial councils and with the Economic Council of Canada. With the latter Council, the Board co-sponsored a Conference on Productivity Through New Technology in February 1965.

## PART I.—BANKING AND OTHER COMMERCIAL FINANCE

### Section 1.—Banking

#### Subsection 1.—The Bank of Canada\*

The Bank of Canada is Canada's central bank. It was incorporated under the Bank of Canada Act in 1934 and commenced operations on Mar. 11, 1935. The Act of Parliament which established the central bank charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it certain specific powers for discharging this responsibility. Through the exercise of these powers, the Bank of Canada determines broadly the combined total of the basic forms of Canadian money held by the community—currency outside banks plus deposit balances in chartered bank accounts.

By virtue of the provisions of the Bank of Canada Act, which enable the central bank to increase or decrease the total amount of cash reserves available to the chartered banks as a group, the Bank of Canada is able to determine broadly the over-all level of the total assets and deposit liabilities of the group, and hence of the combined total of currency and bank deposits. The Bank Act requires that each chartered bank maintain a minimum amount of cash reserves in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. This minimum requirement is 8 p.c. of the bank's total Canadian

\* Revised by the Research Department of the Bank of Canada.

dollar deposit liabilities on a monthly average basis. The ability of the chartered banks as a group to expand their total assets and deposit liabilities therefore depends on the level of total cash reserves. An increase in cash reserves will encourage the banks to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

The chief method by which the Bank of Canada can affect the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in reserves of the chartered banks and makes it necessary for them to reduce their assets and deposit liabilities.

The influence that the Bank of Canada has on credit conditions and hence on economic behaviour stems from its ability to determine broadly the level of total holdings of currency and chartered bank deposits. The trend of total holdings of these forms of money can have an influence on liquidity generally, including effects on interest rates and bond prices and the availability of credit, and on expectations regarding future financial and economic trends, all of which have some effect on decisions to spend or to save. However, many factors other than changes in the money supply also have important influences on financial and economic developments, such as: the state of economic conditions and prospects outside Canada; the competitive strength of Canadian business enterprises both at home and abroad; the character of the investment decisions and price and wage policies in domestic industries; the skills and degree of mobility of labour; and the nature of public policies at all levels of government with regard to such matters as expenditure, taxation, subsidies and the regulation of industry. In forming its judgments, the Bank of Canada is bound by criteria laid down by Act of Parliament in the preamble to the Bank of Canada Act of 1934. Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing state of the economy as reflected in the complex pattern of economic and financial developments.

Although the Bank of Canada has the power to determine the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. That depends on the wishes of the public, since deposits can be converted freely into notes and coin and back again. Nor does the Bank have any direct control over the growth of other forms of money or of close substitutes for money as a store of wealth in liquid form, of which there are many varieties in Canada—mainly deposit balances in savings institutions other than chartered banks and short-term securities issued by governments and corporations.

The cash reserve system in Canada, which is similar to that in a number of other countries, while placing the central bank in a position where it can determine within broad limits the total amount of chartered bank assets and deposits, leaves the allocation of bank credit and other forms of credit to the private sector of the economy. Each chartered bank can attempt to gain as large a share as possible of the total cash reserves by competing for deposits. Each bank determines how its assets will be distributed, for example, between various kinds of securities and loans to various types of borrowers. The Bank of Canada has no power to direct banks or other lenders to make funds available to certain groups or in certain regions on the same terms or on different terms than to other groups or in other regions. The influence of the central bank—based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securities—is both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are set forth in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938, 1954 and 1967. Some of these powers are outlined in the 1965 Year Book at pp. 1031-1032.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown.

**The Industrial Development Bank.**—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Minister of Trade and Commerce. The authorized capital of the Bank is \$50,000,000 and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed five times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises the Bank is empowered to lend money or guarantee loans and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of \$200,000 each, may not exceed \$200,000,000.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of Incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Rimouski, Quebec, Trois-Rivières, Montreal, Ottawa, Toronto, Hamilton, Waterloo, London, Windsor, Sudbury, Port Arthur, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Kelowna, Vancouver, Victoria and Prince George.

## 2.—Assets and Liabilities of the Industrial Development Bank, as at Sept. 30, 1962-66

<sup>1</sup> Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

**Subsection 2.—Currency**

**Note Circulation.**—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves. The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

**3.—Bank of Canada Note Liabilities, as at Dec. 31, 1962-66**

<sup>1</sup> Total issue less notes held by chartered banks.

**Coinage.\***—Under the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

It was announced in December 1966 that the Royal Canadian Mint will change from silver to pure nickel for coinage of the three main silver coins currently in use—the 10-cent, 25-cent and 50-cent coins; the production of silver dollars will continue. The change will require amendments in the Currency, Mint and Exchange Fund Act, which are to be submitted to Parliament in 1967, and become effective during 1968.

## 5.—Canadian Coin in Circulation, as at Dec. 31, 1956-65

NOTE.—The figures shown are of net issues of coin. Figures from 1901 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

<sup>1</sup> Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

**The Royal Canadian Mint.\***—The Ottawa Mint, established as a branch of the Royal Mint under the (Imperial) Coinage Act of 1870, was opened on Jan. 2, 1908. On Dec. 1, 1931, it became the Royal Canadian Mint and now operates as a branch of the Department of Finance.

\* Revised by the Master of the Royal Canadian Mint, Ottawa.

The principal functions of the Mint are the execution of domestic and foreign coin; the refining of gold and silver; the acquisition of gold, silver and other metals, payments for which are made on the basis of Mint assays; the control, preparation and movement of gold and coin shipments; the safeguarding of Mint holdings of monetary metals, including coin and precious metals in various processing stages until finished and issued; the fabrication and engraving of dies for coinage, medals, signatures and official seals; the issue of coin sets to numismatists and the administration of various regulations issued under the terms and provisions of the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315).

### Subsection 3.—The Chartered Banks\*

The Canadian commercial banking system consists of ten privately owned banks, chartered by Parliament and operating under the provisions of the Bank Act.† Of the eight in operation, five are nation-wide institutions; two operate mainly in Quebec and in other French-speaking areas and one, affiliated with a New York bank, has branches in six large cities. At Sept. 30, 1966, these banks together operated 6,031 banking offices of which 5,802 were in Canada and 229 abroad. Thus, the chief distinguishing feature of the Canadian banking system is the relatively small number of large banks having an extensive network of branches, operating under a single legislative jurisdiction (the Federal Government) and under one detailed and comprehensive statute (the Bank Act).

Since the first banks were established during the first quarter of the nineteenth century, the commercial banking system has developed in response to the changing needs of the Canadian economy, an evolution which is still in rapid progress. Canadian economic development has been characterized by two main features—successive but by no means continuous periods of rapid geographical expansion of settlement, and a continued dependence on export markets as new natural resources (agricultural land, forests and minerals) were exploited. Thus, Canadian banking has continually had to migrate to new areas and to find appropriate methods of financing new industries and new products; and it has from the beginning possessed a strongly ‘international’ character‡ with much emphasis on the financing of foreign trade, on foreign exchange operations, and on correspondent relations with foreign banks. At the same time, as regional isolation has gradually broken down and the economy has been integrated, banks originating in local areas have become part of a nation-wide banking system, in part by process of amalgamation particularly marked in the first twenty-five years of the present century.

### Bank Legislation

From the first, banks in what is now Canada sought to operate under Acts of incorporation (charters) passed by the legislatures of the colonies in which they operated. As new banks were incorporated and older ones obtained charter renewals, there developed in the bank charters themselves a quite extensive and fairly uniform code of banking law. At Confederation, responsibility for banking and currency was given to the Dominion Government and in 1871 the first general Bank Act was passed. This legislation is subject to review and revision every ten years, a feature that has helped to keep the banking system adapted to the needs of a changing economy. The decennial revision was due in 1964, but the Bank Act was extended in order to provide time to consider recommendations made by the Royal Commission on Banking and Finance established in 1961; the Commission's report was published in 1964.††

The Bank Act has become a most detailed and comprehensive piece of legislation which provides for the internal regulation and organization of the banks, for the auditing of their accounts, and for the ways in which their capital stock may be issued and transferred, their dividends paid, and their affairs settled in case of amalgamation, winding-up or insolvency. In addition, it states what cash reserves the banks must keep, what reports they must make to the Government and to the Bank of Canada about their affairs and sets forth a variety of rules governing the conduct of business with the public. The Bank Act also specifies the maximum rate of interest that may be charged on bank loans. (Since the 1944 Bank Act revision this ceiling has been 6 p.c., replacing the 7-p.c. ceiling that

\* More detail is included in an article appearing in the 1961 Year Book, pp. 1115-1120, prepared by J. Douglas Gibson, General Manager of The Bank of Nova Scotia. The early history of currency and banking in Canada is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.

† The Bank of Western Canada and the Bank of British Columbia were chartered by Parliament but had not commenced operations as of Feb. 28, 1967.

‡ The larger Canadian banks have long maintained offices in London and New York. In addition, some Canadian banks for more than half a century have been providing an important part of the commercial banking facilities in the Caribbean area (see Table 10, p. 1129).

†† At time of writing, the Bank Act revision was before Parliament; see Chap. XXVII, Pt. V, outlining Federal Legislation, 1966-67.

had prevailed since 1871.) The banks derive their corporate existence from the Act, which states that "each bank . . . is a body politic and corporate and this Act is its charter"; successive Bank Acts have empowered the banks to do business for a period of ten years, until the next revision of the Act.

### **Banking Operations**

Operating under the Bank Act, the chartered banks at their branches accept deposits from the public, make loans covering a wide range of commercial, industrial, agricultural and consumer activities, deal in foreign exchange, receive and pay out Bank of Canada notes and coin, provide safekeeping facilities, and perform a variety of other services coming within the scope of the general business of banking. The head office of a Canadian bank does not transact ordinary day-to-day business with the public; it performs general administration and policy-making functions, manages the bank's investment portfolio, does its centralized accounting work, and maintains specialized departments devoted to inspection of branch operations, the development of branch office methods, the acquisition of new business, premises, staff, arrangements with foreign banks, advertising, etc.

Under its branch system, Canadian banking is able to provide standard banking facilities throughout the country. Every branch, even the smallest, can provide all banking services and each has behind it the resources of a large bank, which means that lending requirements can be met just as well by a branch in a small town or a suburban branch as in the main branches of a large city. Branch banking also provides an excellent training for Canadian bank officers through the system of promotion and transfer from branch to branch. Almost without exception, the chief executives of the Canadian banks have grown up in the service and have been trained in this way.

The branch system has proved to be most flexible and Canadian banking has been able to keep pace with settlement and economic development during its periods of most rapid growth. Particularly during the past quarter-century, with a rapidly expanding economy, sharply rising population and growing urbanization, new branches have opened at a very rapid rate. Banking offices in Canada, which numbered about 3,300 at the end of 1939 and 3,100 at the end of 1945, grew by over 2,900 in the next 21 years. As this growth suggests, Canadian banks have taken full advantage of the recent expansive atmosphere to extend the volume and variety of their services to industry and to individuals. Strongly competing for customers, they offer a wide variety of new deposit arrangements, including new savings programs, new forms of chequing accounts and greatly broadened lending facilities.

By the end of the War, the banks had experienced more than fifteen years of restricted demand for commercial credit; at the end of 1945 security holdings accounted for about 55 p.c. of the banks' total assets, compared with a little over 40 p.c. just before the War and only about 15 p.c. in 1930. In the early postwar years, the economic control apparatus created for the War was gradually dismantled. The expansion of the private sector of the economy and the contraction of the government sector were quickly reflected in a shift of bank assets from government securities to commercial loans. Between the end of 1945 and the end of 1950, bank loans in Canadian currency increased from about 21 p.c. to 31 p.c. of total assets. There was, at the same time, a rapid growth in total assets, as the monetary authorities leaned to the side of relatively easy money conditions to stimulate the economy and to ward off the widely anticipated postwar recession. In the five years ended Dec. 31, 1950, total assets expanded from about \$7,300,000,000 to \$9,400,000,000, almost all of the increase being in Canadian assets.

It was not until the outbreak of the Korean War in June 1950 that the fear of inflation, arising from the heavy demands on Canadian resources, led to the adoption of restraining measures. Since then, the banks have experienced substantial changes in their credit-granting capacity, as the country's official monetary policy was adapted to meet changes in business conditions. Alternating periods of ease and restraint have been marked by periods of rapidly rising bank assets followed by levelling-off phases.

The Korean boom of 1950-51 was followed, after only a short pause, by the investment boom of 1953-54. Recession in 1954-55 was accompanied by an easy monetary policy, during which the banks built up their liquid assets in the form of government bonds. Then a second and greater investment boom got under way in late 1955, which carried the Canadian economy and the banking system into another period when resources were strained to the limit. At this time, new measures of restraint were introduced into the Canadian banking system by the monetary authorities, including an agreed secondary reserve ratio of 7 p.c. in addition to the cash reserves of 8 p.c. already prescribed in the Bank Act revision of 1954. A further agreement with the Bank of Canada was aimed at restraining term loans for capital purposes\* and in 1956 bank loans to instalment finance companies were also put under some restraint. The boom of 1955-57 was followed by a mild recession in 1957-58, moderate recovery in 1958-59, slackening in 1960 and recovery again in 1961-65. Over the period 1955-65, the banks had not regained the liquidity that characterized earlier postwar recessions, and there appeared an increasing need to husband resources carefully for the various and growing alternative outlets which developed as the result of economic growth, and of the efforts of both the Federal Government and the banks themselves to provide new uses for bank credit. In 1966 the Government introduced legislation which, when passed, would increase competition between banks and other financial institutions.†

One of the first government measures was the Farm Improvement Loans Act of 1944, under which the chartered banks were authorized to make loans to farmers for the purchase of equipment and livestock and for making various improvements to their farm buildings and facilities (see pp. 458-459). These loans are often for sizable amounts (an average of about \$1,500) and the terms have been gradually extended to a maximum sum of \$15,000 outstanding to any one borrower with a maximum period of ten years (four years for implements). The banks are guaranteed against loss up to 10 p.c. of their loans made during the three-year "lending periods", up to a maximum total of loans by all banks. This total is \$700,000,000 for the lending period to end in mid-1968. By the end of July 1966, the total amount of loans made under this Act was approximately \$1,855,600,000 and the amount outstanding was \$377,000,000.

The 1954 revision of the Bank Act introduced a major change in banking practice by enabling the banks to acquire mortgages issued under the National Housing Act. About 35 p.c. of all NHA mortgage loans in the years 1954-59 were made by the chartered banks, but at the end of 1959 the NHA interest rate was raised to 6½ p.c. and the banks withdrew from this field of lending. Notwithstanding this, by Dec. 31, 1966 they held some \$780,000,000 in NHA mortgages, representing about 4 p.c. of total assets. Another change affecting housing in the 1954 revision enabled the banks to make home improvement loans under a guarantee system rather similar to the one developed for farm improvement loans. By the end of 1965, home improvement loans amounting to more than \$383,700,000 had been approved and the banks had about \$73,200,000 of such loans on their books.

In November 1960, the Small Businesses Loans Act was passed guaranteeing, under terms to the banks similar to those of the Farm Improvement Loans Act, certain types of bank loan to small businesses for the purposes of making capital improvements to premises and equipment. This provides for loans that do not fall within the usual scope of bank lending to small business, by reason of the term nature of the loan together with the lack of collateral resources of the borrower. Of course, chartered banks make loans to small businesses for a great variety of purposes, including many of a medium-term character; indeed, the working capital loan to the small-size or medium-size industry or commercial enterprise is the traditional stock-in-trade business of the chartered banks.

In April 1961, the charter of the Export Finance Corporation of Canada Limited, which had been incorporated by special Act of Parliament in June 1959 for private in-

\* Such loans were almost entirely a postwar innovation in Canadian lending practice, and had increased markedly during the easy-money period of 1954-55. Since 1956, term lending has been generally confined within narrower limits, although it is still practised when conditions permit.

† See footnote ††, p. 1125.

terests, was acquired by the chartered banks. The principal purpose of the Corporation is to assist in the medium-term (one to five years) financing of exports which have been insured by the Export Credit Insurance Corporation, a Crown company.

Still another area of lending which has expanded greatly in recent years is that of consumer credit. Although the banks have always made some personal loans, they have recently moved aggressively into the field of lending to the general public for the purchase of automobiles, consumer durables and debt consolidation. Following the 1954 Bank Act revision, and partly as a result of the change then made which enabled the banks to take chattel mortgage security, some banks have developed extensive consumer credit divisions. Personal loans made by the banks, other than those secured by stocks and bonds and home improvement loans, mounted from \$420,000,000 at the end of 1957 to \$2,401,600,000 outstanding at Dec. 31, 1966.

Outside of Canada, the Canadian banks have continued to expand their branch systems in the Caribbean area (although the two Canadian banks operating in Cuba found it necessary to withdraw), in South America and in Europe. In recent years the growth of an international money market, following the economic recovery in Europe and the restoration of confidence in the stability of the Western economies and their currencies, has led to large movements of Western capital from one centre to another. The Canadian banks have participated extensively in this international money market, mainly through New York and London where most of them maintain large offices.

The postwar growth in bank assets has been accompanied by a substantial increase in total earnings. Earnings per share of capital employed did not increase to the same extent, however, as the banks found it necessary to raise new funds from time to time after 1950 in order to maintain an appropriate relationship between their shareholders' capital and the rapidly rising level of risk assets. The banks have been among the largest issuers of new share capital to Canadians in the past quarter-century.

**Branches of Chartered Banks.**—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—The Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of The Bank of Toronto and The Dominion Bank as The Toronto-Dominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 have reduced this number to eight.\* The number of branches of chartered banks in each province periodically from 1868 to 1966 is given in Table 8.

\* See footnote †, p. 1125.

**Cheque Payments.**—A monthly record of the value of cheques charged to customer accounts at all chartered bank offices in the major clearing-house centres of Canada is available from 1924. During the past twenty years the value of cheques cleared in these centres has increased steadily at an average of over 9 p.c. a year. Clearing centres in British Columbia showed the highest rate of increase during that period, followed closely by Quebec and Ontario.

The value of cheques cashed in the 35 major clearing centres in 1965 reached a record high of \$476,000,000, an increase of 14.1 p.c. over 1964. All but one of the reporting centres recorded increases. London, Ont., reported the largest increase at 22.5 p.c., Halifax, N.S., increased by 20.7 p.c., Saskatoon, Sask., by 18.2 p.c. and Vancouver, B.C., by 16.2 p.c. Toronto, which accounted for 37.5 p.c. of the total value of cheques cleared, rose by 14.9 p.c. and Montreal by 14.1 p.c.

#### Subsection 4.—Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec—the Montreal City and District Savings Bank and La Banque d'Économie de Québec—established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

**Post Office Savings Bank.**—The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this

Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1963-66 follow.

<i>Item</i>	<i>1963</i>	<i>1964</i>	<i>1965</i>	<i>1966</i>
	\$	\$	\$	\$

Withdrawals.....	7,199,360	6,697,740	6,212,491	5,773,495
Balance on deposit.....	25,880,479	24,604,919	23,254,957	22,023,929

**Provincial Government Savings Institutions.**—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta.

*Ontario.*—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 3 p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits as of Mar. 31, 1966 were \$81,600,000 and the number of depositors was approximately 92,000; 21 branches are in operation throughout the province.

*Alberta.*—Savings deposits are accepted at 63 Province of Alberta Treasury Branches throughout the province. The total of these deposits at Mar. 31, 1966 was \$84,159,852, of which \$52,130,105 was payable on demand bearing interest at 3½ p.c. per annum, \$15,936,618 was in term savings for terms of from one to five years, bearing interest at 4 p.c. to 5½ p.c. per annum depending on the term, and \$16,093,128 was in term deposit receipts for terms of from 30 days to 365 days, bearing interest at rates comparable to those paid on the open market.

**Quebec Savings Banks.**—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Oct. 31, 1966, a paid-up capital and reserve of \$16,500,000, savings deposits of \$374,342,592, and total liabilities of \$393,942,115. Total assets amounted to \$393,942,115, including \$108,727,179 of federal, provincial, municipal and other securities.

La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Mar. 31, 1966, savings deposits of \$53,667,156 and a paid-up capital and reserve of \$3,500,000. Total liabilities amounted to \$60,459,860 and total assets to a like amount.

**Credit Unions.**—Credit unions are savings and loan associations organized and operated on a co-operative basis by people having a common bond of association such as a parish, club, lodge or labour union, that of employment in a plant, industry or department, or residence in a rural or well-defined urban community. The number of chartered credit unions in Canada at the end of 1965 was 4,939 of which 4,364 reported a total membership of 3,700,000 and assets of \$2,500,000,000. Quebec, with 2,000,000 members and assets of \$1,400,000,000, accounted for 55 p.c. of both total membership and total assets of all credit unions in Canada. Credit unions classified by bond of association on a percentage basis were: occupational 35, rural 33, urban 17 and other 15. The number of rural associations has been declining over the past several years.

Canadian credit unions in the 1956-65 decade have continued the steady growth generally in evidence since credit unions were first organized in Quebec in the early part of the present century. Loans granted by credit unions increased by 17 p.c. in 1965 to reach \$1,078,000,000, passing the \$1,000,000,000-mark for the first time and being a 248-p.c. increase over the corresponding figure of \$310,000,000 in 1956. Assets at \$2,500,000,000 increased by 234 p.c. and savings at \$2,300,000,000 increased by 225 p.c. in the same comparison. Membership of 3,700,000 represented 18.6 p.c. of the total population, compared with 1,900,000 and 11.6 p.c., respectively, in 1956.

There were 28 central credit unions in 1965; these unions act as credit unions for the credit unions, mainly by accepting deposits of surplus funds from them and providing a source of funds for them to borrow when they cannot meet the demand for local loans. Most of the centrals also admit co-operatives as members. Total assets of the centrals increased 18 p.c. to \$357,000,000 and loans to members increased 43 p.c. to \$221,000,000 over the previous year. The Canadian Co-operative Credit Society serves as a central credit union for the provincial centrals and large co-operatives all across Canada. In 1965, membership consisted of four provincial centrals, four commercial co-operatives and two co-operative insurance companies. At Dec. 31, 1965, the Society had assets of \$1,200,000, loans outstanding of \$850,000 and member deposits of \$650,000.

## Section 2.—Other Commercial Finance

### Subsection 1.—Trust and Mortgage Loan Companies\*

Trust and mortgage loan companies are registered with either the federal or provincial governments. They operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 as amended by SC 1953 c. 5, SC 1958 c. 35, SC 1961 c. 51, and SC 1964-65 c. 40; RSC 1952 c. 272 as amended by SC 1953 c. 10, SC 1958 c. 42, SC 1961 c. 55 and SC 1964-65 c. 40, respectively) or under corresponding provincial legislation.

\* Prepared by the Research Department of the Bank of Canada in co-operation with the Superintendent of Insurance for Canada.

The first mortgage loan companies were established in Ontario in the 1840s as co-operative associations to provide mortgage finance for their members. These associations evolved under legislation which was amended to give them permanent corporate status as mortgage lending institutions. They obtained their funds principally by selling medium- and long-term debentures to the public but also had the power to open deposit accounts. Trust companies were first incorporated in Ontario in the 1880s. Although the trust company legislation prevented them from borrowing funds, they had the power to accept funds in guaranteed trust accounts and invest them in specified types of assets. This feature of trust company legislation is now general throughout Canada. Although it does set up a trust rather than creditor relationship between trust companies and the holders of their certificates and deposits, the trust companies operate as financial intermediaries in the same way as mortgage loan companies, chartered banks or savings and other financial institutions. A more important special characteristic of trust companies is that they are the only corporations in Canada with power to act as trustees for property interests and to conduct other fiduciary business. In this capacity they act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stock and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcies.

Mortgage loan and trust companies were established and grew rapidly under provincial legislation in the late nineteenth and early twentieth centuries. Some companies were chartered by special Acts of Parliament but it was not until 1914 that federal legislation was passed and the Federal Government began to regulate trust and loan companies registered under its Acts. There are now eight federal trust companies and 13 federal loan companies. The Superintendent of Insurance examines these companies and also, by arrangement with the provinces, trust and loan companies incorporated in Nova Scotia, and trust companies incorporated in New Brunswick and Manitoba. Companies must be licensed by each province in which they wish to operate.

Although there are many differences among the various federal and provincial Acts, the broad lines of the legislation are common. In their intermediary business the companies have the powers mentioned above to borrow or, in the case of trust companies, accept funds in guaranteed accounts subject to maximum permitted ratios of these funds to shareholders' equity. The funds may be invested in specified assets which include first mortgages on real property, government securities and the bonds and equity of corporations having established earnings records. The companies may grant loans on the security of such bonds and stocks but may not make unsecured commercial and personal loans. Trust and loan companies are not required to hold specified cash reserves, as are the chartered and savings banks, but there are broadly defined "liquid asset" requirements in a number of the Acts. The investment powers of federal companies were broadened in 1965, when the maximum permitted value of conventional mortgage loans was raised from 66 $\frac{2}{3}$  p.c. to 75 p.c. of the appraised value of the property, the limit on common stock holdings was raised from 15 p.c. to 25 p.c. of total assets and the quality tests for common stocks eligible for investment were relaxed.

The trust and mortgage loan companies have been substantial members of the Canadian financial system since their early years. In the 1920s they held about one half of the private mortgage business in Canada but during the 1930s and World War II their growth rate fell off sharply because of the impact of the depression of the 1930s and World War II on the mortgage business. In the years since the War the re-emergence of strong demands for mortgage financing and the willingness of many trust and loan companies to compete aggressively for funds have led to sustained rapid expansion. These developments may be traced in the annual statistics published by the Superintendent of Insurance and provincial authorities, and in the quarterly balance sheet data compiled by the Dominion Bureau of Statistics.

According to the DBS figures, the mortgage loan companies had assets before investment in subsidiaries of \$2,216,000,000 at the end of 1965 compared with \$1,886,000,000 a year earlier. Their holdings of mortgages amounted to \$1,817,000,000 or 82 p.c. of total assets. To finance their investments, these companies had borrowed \$1,365,000,000 or 62 p.c. of their total funds by the sale of debentures and \$366,000,000 from deposit accounts.

At the end of 1965, the "intermediary" assets of trust companies in the DBS survey were \$3,422,000,000 compared with \$2,860,000,000 a year earlier, for an increase of 20 p.c. In addition, the companies had a total of \$12,588,000,000, at book values, under administration in estate, trust and agency accounts on Dec. 31, 1965.\* Trust companies, while not specializing in mortgage financing to the same extent as loan companies, in recent years have been putting a high proportion of their funds into these investments with the result that mortgages were 51 p.c. of their assets at the end of 1965 compared with 35 p.c. five years earlier. The trust companies had \$1,973,000,000 of term certificates outstanding and \$1,119,000,000 in deposit accounts in December 1965, accounting for over 90 p.c. of total funds. About one half of the deposits were in chequable accounts. There is considerable variety among the trust companies and a few have developed a substantial short-term business, raising funds by issuing certificates for terms as short as thirty days and also operating as lenders in the money market. Nevertheless, it remains true that the main business of the trust companies in their intermediary role, as of the mortgage loan companies, is to channel savings into mortgages and other long-term investments.

More complete and up-to-date financial information may be found in quarterly balance sheet statements published by the Dominion Bureau of Statistics and the Bank of Canada, the reports of the Superintendent of Insurance on Loan and Trust Companies, the reports of provincial supervisory authorities and in the Report of the Royal Commission on Banking and Finance as well as submissions and evidence put before the Commission. The annual figures given in Tables 19-22 are from the Department of Insurance report.

\* Department of Insurance figure.

**Subsection 2.—Licensed Small Loans Companies and Licensed Money-Lenders\***

Small loans companies and money-lenders are subject to the Small Loans Act (RSC 1952, c. 251, as amended by SC 1956, c. 46). This Act, first passed in 1939, sets maximum charges on personal cash loans not in excess of \$1,500 and is administered by the Department of Insurance. Lenders not licensed under the Act may not charge more than 1 p.c. per month. Those wishing to make small loans at higher rates must be licensed each year by the Minister of Finance under the Small Loans Act. The Act allows maximum rates, including charges of every kind, of 2 p.c. per month on unpaid balances not exceeding \$300, 1 p.c. per month on the portion of unpaid balances exceeding \$300 but not exceeding \$1,000 and one half of 1 p.c. on any remainder of the balance exceeding \$1,000. Loans in excess of \$1,500 are not regulated and lenders operating entirely above this limit and the larger loans of licensed lenders are thus exempt from the Act. Nor does the Act regulate charges for the instalment financing of sales. Prior to Jan. 1, 1957, the Act applied only to loans of \$500 or less and the maximum rate was 2 p.c. per month.

At the end of 1965, there were six small loans companies and 83 money-lenders licensed under the Act. Small loans companies are incorporated by special Acts of the Parliament of Canada, the first of them commencing business in 1928; the money-lenders include provincially incorporated companies and a few partnerships and individuals. Many of the small loans companies and money-lenders are affiliated with other financial institutions, principally Canadian sales finance companies and American finance or loan companies, and these subsidiary companies account for a high proportion of the total business of licensed lenders. The affiliations with sales finance companies reflect the close relationship between instalment financing and the consumer loan business. The Dominion Bureau of Statistics publishes quarterly balance sheets for sales finance and consumer loan companies as a whole and does not attempt to distinguish two groups within the industry.†

The subsidiary small loans companies and money-lenders obtain most of their funds through their parent companies. A few of the larger companies have supplemented their bank loans by selling short-term paper in the market but the amount has been small compared with the short-term market borrowing of the sales finance companies. The smaller independent companies rely mainly on their shareholders and on borrowing from the chartered banks.

The annual figures of assets and liabilities given in Table 23 for 1962-65 are from the Department of Insurance report.‡

\* Prepared by the Research Department of the Bank of Canada in co-operation with the Superintendent of Insurance for Canada.

† See *Business Financial Statistics* (Catalogue No. 61-006). More complete data on the business of licensed lenders are given in the *Report of the Superintendent of Insurance for Canada on Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1965. (Catalogue No. In 3-4/1965.)

## 23.—Assets and Liabilities of Small Loans Companies and Money-Lenders, 1962-65

Other.....	35,411,004	38,983,907	45,079,198	54,853,220

The combined companies showed an increase in the amount of business done in 1965 compared with 1964. The number of small loans made to the public during 1965 increased from 1,469,694 to 1,556,294 or by about 6 p.c., and the amount of such loans rose from \$837,636,532 to \$904,651,318 or by about 8 p.c. The average small loan made was approximately \$581 compared with \$542 in 1964. At the end of the year, small loans outstanding numbered 1,245,921 for an amount of \$627,526,360 or an average of \$504 per loan; comparable figures for 1964 were 1,165,236, \$575,126,976 and \$494, respectively.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts decreased from \$29,829,874 in 1964 (\$19,205,033 being the profit on small loans and \$10,624,841 the profit on business other than small loans) to \$27,521,976 in 1965 (\$16,633,703 being the profit on small loans and \$10,888,273 the profit on business other than small loans).

## Subsection 3.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.\* That is, the par rate of exchange between the dollar and the pound sterling was fixed at \$4.866, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under \$2 per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at \$4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

\* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as \$3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows\* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933 both currencies had reached a premium in New York. Meanwhile, in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at \$35 per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).\*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of \$4.02½ and \$4.03½, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of \$1.10 to \$1.11 for the U.S. dollar and \$4.43 to \$4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of \$1.00 to \$1.00½ and for sterling \$4.02 to \$4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5-p.c. reduction by Britain in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07¼ and \$3.08¼ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On

\* Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of 92½ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value. The movements of the U.S. dollar in Canadian funds from January 1957 to December 1966 are shown in Table 24.

<sup>1</sup> On Oct. 1, 1959, \$62,500,000 representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund.

<sup>2</sup> Includes the proceeds of a drawing equivalent to U.S. \$300,000,000 which was made from the International Monetary Fund in June 1962 and which was outstanding at year-end. The amount of Canada's net obligation to the International Monetary Fund was \$275,700,000 at Dec. 31, 1962 and \$196,000,000 at Dec. 31, 1963.

<sup>3</sup> Canada's net creditor position with the International Monetary Fund was \$60,000,000 at Dec. 31, 1964, \$215,900,000 at Dec. 31, 1965 and \$263,500,000 at Dec. 31, 1966.

#### Subsection 4.—The Bond Market\*

**Sales of Canadian Bonds.**—Canadian borrowers, both government and corporate, raised a net total of \$1,783,000,000 on the bond market in 1965, considerably less than the \$2,839,000,000 raised in 1964. Government revenues rose relative to expenditures, reducing government demands on the market; corporations had an increased need for funds but put greater emphasis on other forms of borrowing.

The Federal Government retired \$52,000,000 of its outstanding securities during 1965. There was a budgetary surplus of \$70,000,000 for the year and non-budgetary cash requirements (primarily for loans and advances) were almost covered by non-budgetary receipts

\* Prepared (November 1966) by the Central Classification Research and Development Staff of the Dominion Bureau of Statistics, using data published by the Bank of Canada, and from the Budget Papers, Mar. 29, 1966.

from repayment of loans, annuity and pension funds, and other sources. There was a marked change in the type of debt outstanding with marketable bonds being retired and savings bonds issued.

Both provincial and municipal governments increased their debt outstanding by smaller amounts in 1965 than in 1964. Part of this decline was made possible by increases in bank loans of \$29,000,000 to provincial governments and \$158,000,000 to municipal governments.

Corporation bonds (including short-term paper of finance and other corporations) issued during 1965 amounted to \$850,000,000, a decline from \$1,029,000,000 in 1964. Business capital expenditures increased by almost \$2,000,000,000 while savings increased by much less, resulting in a sharply increased need for funds. However, as a result of the United States guidelines and the Atlantic Acceptance Corporation default on its obligations, many corporations, particularly financial corporations, were forced to rely less on the money market in 1965 than in 1964. Although bond issues in 1965 amounted to \$1,122,000,000, a substantial increase from issues in the previous year, there was a net redemption of finance company paper and other short-term commercial paper. Bank loans to sales finance companies increased by 76 p.c. in 1965 and to other corporations by 14 p.c. Foreign direct investment in Canada also increased substantially.

**Bonds Outstanding.**—Total government and business bonds outstanding were estimated at \$48,235,000,000 at Dec. 31, 1965, an increase of 25 p.c. over the \$38,533,000,000 outstanding at the end of 1961. The largest increase of 45 p.c. during the period was in provincial bonds but part of this increase was due to the purchase by the Province of Quebec in 1963 of private hydro-electric companies operating in that province, and the subsequent replacement of corporation bonds by provincial government guaranteed bonds. The total of outstanding bonds includes treasury bills, finance company paper and other short-term commercial paper. It does not include the term deposits, certificates and debentures of trust and mortgage loan companies which totalled over \$3,000,000,000 at the end of 1965. Also excluded is mortgage debt, which the Central Mortgage and Housing Corporation estimated to be over \$18,000,000,000 at the end of 1964.

## 26.—Net New Issues of Canadian Bonds, 1961-65 and Bonds Outstanding, as at Dec. 31, 1961-65

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; corporation bonds include finance company and other short-term commercial paper; "other bonds" include bonds of religious and other institutions and a small amount of foreign bonds payable in Canadian dollars.

**Distribution of Bond Holdings.**—Table 27 shows the estimated distribution, as at Dec. 31, 1964, of government, corporate, and other bonds among the major purchasers of securities. Of the total, 18 p.c. were held by non-residents and the largest identified holders were chartered banks with 11 p.c., life insurance companies with 10 p.c., and trusted pension plans with 8 p.c. The "All other resident" category, which contains all holdings not allocated to specific holders, had \$15,022,000,000 or 32 p.c. of the total. Of this amount, however, \$5,866,000,000 consisted of Government of Canada savings bonds.

### 27.—Estimated Distribution of Bond Holdings, as at Dec. 31, 1964

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; corporation bonds include finance company and other short-term commercial paper; "other bonds" include bonds of religious and other institutions and a small amount of foreign bonds payable in Canadian dollars.

## PART II.—INSURANCE\*

### Section 1.—Life Insurance

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to \$69,656,000,000 at the end of 1965, an increase of \$6,984,000,000 during the year. The ratio of gain in business in force, expressed as a percentage of the amount in force at the beginning of the same year, was 11.1 p.c. in 1965.

Year	In Force at Beginning of Year	Increase in Force for the Year	Per- centage Gain
	\$'000,000	\$'000,000	
1930.....	6,157	335	5.4
1935.....	6,221	38	0.6
1940.....	6,776	200	2.9
1945.....	9,140	612	6.7
1950.....	14,409	1,337	9.3

\* Material in this Part, except as otherwise indicated, was prepared under the direction of the Superintendent of Insurance for Canada, Ottawa. More detailed data are available in the annual reports of the Department of Insurance.

**Subsection 1.—Summary of Life Insurance in Canada**

Table 1 summarizes insurance premiums, claims, amounts of new policies effected and amounts of insurance in force on Dec. 31, 1965. These data are presented according to supervising government authorities for the companies and societies concerned, and according to nationality of company or society.

<sup>1</sup> Death, disability and maturity under insurance contracts.

**Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration**

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since 1955.

The operations analysed in the tables of this Subsection, with the exception of Table 6, include only those of companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 93 p.c. of the life insurance in force in Canada.

## 2.—Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1955-65

NOTE.—Figures for 1889-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; and for 1940-54 in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1151-1153.

**Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration**

The financial statistics in Tables 7 and 8 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

**Subsection 4.—Life Insurance in Canada Transacted by Fraternal Benefit Societies**

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 9 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 10 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of

Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables 9 and 10 relate to the Canadian societies registered by the federal Department of Insurance; there were 14 such societies at the end of 1965.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, although forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business. At the end of 1965 there were 35 foreign fraternal benefit societies federally registered to transact business in Canada, although two of these do not grant life insurance benefits.

<sup>1</sup> All funds, business in Canada only.

#### Subsection 5.—Life Insurance Effected and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1964 and 1965 summary statistics of insurance effected and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The data given are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies.

Canadian life insurance companies operating under federal registration at Dec. 31, 1965 had life insurance in force amounting to \$19,899,066,560 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to \$19,864,473,020; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to \$47,900,424,908 at Dec. 31, 1965, and the total business on the books of these companies, in and out of

Canada, amounted to \$67,799,491,468. Thus, over 29 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada. In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1965, Commonwealth and foreign investments in the amount of \$3,669,015,685.

Approximately 71 p.c. of all business in force in currencies other than Canadian is in United States currency and 17 p.c. is in sterling. From a slightly different point of view, approximately 22 p.c. of this business in force is in currencies of Commonwealth countries other than Canada, and 78 p.c. in currencies of foreign countries.

## Section 2.—Fire and Casualty Insurance

At the end of 1965 there were 261 companies registered by the Federal Government to transact fire insurance in Canada (84 Canadian, 67 British and 110 foreign). Of these companies, 254 (79 Canadian, 66 British and 109 foreign) were also registered to transact casualty insurance. In addition, 103 companies were registered by the Federal Government to transact casualty insurance but not fire insurance (28 Canadian, 7 British and 68 foreign). Of the companies registered to transact fire and/or casualty insurance, 81 were also registered to transact life insurance; 14 of these were registered for fire, life and casualty insurance and 67 for life and casualty but not fire insurance. It should be noted also that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 30 registered fraternal benefit societies transacting accident and sickness insurance, of which 28 also transacted life insurance.

The operations analysed in the tables of this Section, with the exception of Table 12, include only those companies under federal registration. As shown in Table 12, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation and many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis. The table relates to insurance companies only; no data are included for fraternal benefit societies.

## Subsection 2.—Fire Losses

The information in Tables 15 to 17, which deals with the loss of property and life caused by fire, has been summarized from the annual report *Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures in 1964 amounted to \$2,866,472 from 1,792 fires; average federal losses for the period 1955-64 amounted to \$4,613,142 from an annual average of 2,182 fires.

## 15.—Statistics of Fire Losses, 1955-64

NOTE.—Figures for 1926-46 are given in the 1947 Year Book, p. 1078, and those for 1947-54 in the 1960 edition, p. 1169. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

**Subsection 4.—Finances of Companies Transacting Fire and Casualty  
Insurance under Federal Registration**

The financial statistics of Tables 19 and 20 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

**19.—Total Assets and Liabilities for Fire and Casualty Insurance of Canadian Companies and Assets and Liabilities in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1963-65.**

### Section 3.—Government Insurance

#### Federal Government Insurance

For more than fifty years the Federal Government has operated an annuity service, instituted to assist Canadians to make provision for old age; this service is described below. In addition, various insurance schemes have been adopted in recent years by the Federal Government or co-operatively by the federal and provincial governments. Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

**Government Annuities.\***—The Government Annuities Act (RSC 1952, c. 132) was passed in 1908 and is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is \$10 and the maximum \$1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may be arranged to reduce by \$75 a month when payments under the Old Age Security Act begin.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions.

\* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered, the annuity is taxable on the interest portion only. Annuities arising from registered pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1966, the total number of annuity contracts and certificates issued, excluding replacements, was 542,163. On the latter date, 96,350 annuities were being paid amounting to \$55,640,684 annually and 288,752 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1966 was \$1,436,051,060. At that date there were in force 1,267 pension plans underwritten by government annuities, providing 200,498 employees with portable pensions; approximately 30,000 retired employees were receiving pensions. The number of certificates issued during the year was 1,979 compared with 1,783 in 1964-65.

<sup>1</sup> Undetermined.**Provincial Government Insurance**

**Saskatchewan.**—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1965 amounted to \$10,938,740 and earned surplus to \$556,767. The total amount made available to the Government of Saskatchewan from 1945 to Dec. 31, 1965 was \$5,542,769. Assets at the latter date were \$22,593,871, of which \$13,700,000 were invested in bonds and debentures issued by Saskatchewan schools, municipalities, hospitals and the province. Independent insurance agents numbering 606 sell government insurance throughout the province.

The Automobile Accident Insurance Act, which became effective Apr. 1, 1946, is administered by the Saskatchewan Government Insurance Office. It establishes a compulsory automatic insurance plan designed to provide a reasonable minimum of compensation for losses arising from motor vehicle accidents regardless of fault. It also provides public liability insurance, with an inclusive limit of \$35,000 for bodily injury and property damage, as well as comprehensive and collision coverage subject to a \$200 deductible for private passenger cars. Rates vary from \$4 a year for older farm trucks to \$67 for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1965 more than \$94,000,000 was paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Office Librarian, Saskatchewan Government Insurance Office, Regina, Sask.

**Alberta.**—Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. Although both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

### Section 4.—Pension Plans

Very few pension plans in Canada have been in existence for more than 25 years and most of the older plans were installed by governments and financial institutions, such as banks. Employers in industry began showing an interest in pension plans for their employees shortly before World War II and from that time on there was a rapid increase in the rate at which plans were introduced.

Up to 1948 the majority of employers made arrangements with either the Annuities Branch of the Department of Labour (see pp. 1161-1163) or an insurance company for the underwriting of their plans. Then began the use of the facilities of corporate trustees (trust companies) to handle pension moneys, and by 1953 the amount of funds under control of such trustee plans had become a significant factor in the capital market and a growing form of savings. Trustee pension funds are also managed by individual trustees appointed by the employer or through a Pension Fund Society, which is a body incorporated under federal or provincial pension fund societies Acts, companies Acts, etc.

Table 24 shows the distribution of pension business for the years 1961-65.

Pension trust funds derive their income from employer and employee contributions, investment income and profit on the sale of securities. Expenditures arise from pension payments, pensions purchased from an underwriter on retirement or separation, cash withdrawals on death or separation, administrative costs and losses on the sale of securities. The funds are invested in federal, provincial, municipal and corporate bonds, stocks, mortgages, real estate and lease-backs. In recent years corporate trustees have introduced the "pooled" or "classified" type of fund, which enables small plans to have their assets combined so that each fund participates in the diversity, security and yield previously available only to the much larger single funds. The trustees of a fund, whether corporate or individuals, may also purchase mutual funds.

Table 25 shows the various types of trusteed funds and the income, expenditures and assets of the funds in 1962-65.

## PART I.—THE ARMED SERVICES AND DEFENCE RESEARCH\*

### Section 1.—The Department of National Defence

The control and management of all matters relating to national defence, the Canadian Forces and the Defence Research Board are the responsibility of the Minister and Associate Minister of National Defence; the duties and functions relating to national survival have also been assigned to the Department of National Defence with the Canadian Army undertaking the major role.

Effective Aug. 1, 1964, the Headquarters of the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force were integrated to form a single Canadian Forces Headquarters (CFHQ) under a single Chief of Defence Staff. The role of CFHQ is to provide military advice to the Minister of National Defence and to control and administer the Canadian Forces.

CFHQ is organized in four functional Branches headed by the Vice-Chief of Defence Staff, the Chief of Personnel, the Chief of Technical Services and the Comptroller General, who are responsible for advising and supporting the Chief of Defence Staff in matters relating to their assigned spheres of activity. The Defence Research Board conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister, assisted by an Associate Deputy Minister, maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. Three Assistant Deputy

\* Prepared (December 1966) in the Office of the Deputy Minister, Department of National Defence, Ottawa.

Ministers each administers a division of the Deputy Minister's Branch responsible for personnel, logistics and finance. Also responsible to the Deputy Minister are the Judge Advocate General, the Departmental Secretary and the Director of Information Services.

The Defence Council meets at regular intervals to consider and advise on major policy matters. The Council consists of: the Minister of National Defence as Chairman; the Associate Minister of National Defence as Vice-Chairman; and the Parliamentary Assistant to the Minister of National Defence, the Deputy Minister of National Defence, the Chief of Defence Staff, the Chairman of the Defence Research Board, the Vice-Chief of Defence Staff as members and a Secretary.

**Liaison in Other Countries.**—The Chief of Defence Staff, who is the Canadian military representative to the North Atlantic Treaty Organization, is responsible for advice on all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Defence Liaison Staff London, representing the Canadian Armed Forces and the Defence Research Board in Britain, the Chairman of which is the principal military adviser to the Canadian High Commissioner in London; (2) the Canadian Defence Liaison Staff Washington, representing the Canadian Armed Forces and the Defence Research Board in the United States, the Chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative to SACLANT Headquarters, and the Canadian member of the NATO Military Committee in Permanent Session; (3) in Paris, a Military Adviser to the Canadian Permanent Representative to the North Atlantic Council and also a Canadian National Military Representative to SHAPE; and (4) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, which provides advice on such matters to the respective governments.

**Canada-United States Committee on Joint Defence.**—This Committee is composed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such other Cabinet members as either government may designate from time to time. Its function is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the ministerial level on problems that may arise, with a view to strengthening further the close co-operation between the two governments on joint defence matters; and to report on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence co-operation. Meetings normally alternate between Canada and the United States with the host country providing the chairman.

**Mutual Aid.**—Canada's contributions to NATO are outlined on p. 177.

**Rates of Pay Issuable to Canadian Forces.**—The entire pay structure for comparable ranks in the three Services is on a uniform basis. Tables 1 and 2 contain the monthly rates of pay for officers and men, respectively, effective Oct. 1, 1966. Equivalent ranks for the Navy, Army and Air Force are listed following Table 2.

Commodore	Brigadier	Air Commodore
Rear-Admiral	Major-General	Air Vice-Marshal
Vice-Admiral	Lieutenant-General	Air Marshal

**Allowances Issuable to Canadian Forces.**—The following are the most common entitlements, aside from pay, for members of the regular Forces. Other entitlements related to special duties and to the reserve Forces are not shown.

*Aircrew Allowance.*—Aircrew allowance in varying amounts may be paid to a member of aircrew, or an officer or man undergoing flying training to become a pilot, navigator or other member of aircrew if he is not already receiving the special rate of pay applicable to pilots or navigators.

*Outfit Allowance and Clothing Upkeep Allowance.*—Officers receive a single payment of \$450 on appointment and Warrant Officers Class 1 receive \$270. Men receive a free issue of clothing on joining and thereafter a monthly clothing upkeep allowance of \$7; Navy Petty Officers 1st Class and above receive \$8. Women receive a free issue of clothing on joining with an underclothing allowance of \$15, and thereafter a monthly clothing allowance of \$8.

*Foreign Allowances.*—Officers and men posted for duty to a country outside of Canada are entitled to allowances to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location.

*Isolation Allowance.*—Isolation allowance, at rates which depend on the specific location, are paid to personnel serving at isolated posts in Canada.

*Submarine Allowance.*—An officer or man undergoing submarine training or filling an appointment in a submarine receives from \$32.50 to \$115 a month, depending on rank.

*Risk Allowance.*—An officer or man actively engaged or undergoing training as a parachutist or on flying duties, and not entitled to aircrew allowance, is paid risk allowance at the rate of \$30 a month.

*Sea Duty Allowance.*—An officer or man serving in a ship is entitled to sea duty allowance at the rate of \$15 a month.

## Section 2.—The Command Structure of the Canadian Forces

The Canadian Forces are organized on a functional basis to reflect the major commitments assigned by the Government. Under this concept, all Forces devoted to a primary mission are grouped under a single commander who is assigned sufficient resources to discharge his responsibilities. Specifically, the Canadian Forces are formed into ten major organizational entities reporting to the Chief of the Defence Staff. These are as follows:—

### MOBILE COMMAND

The role of Mobile Command is: to provide military units suitably trained and equipped to support United Nations or other peacekeeping/peace-restoring operations; to provide ground forces, including tactical air support for the protection of Canadian territory; and to maintain operational readiness of combat formations in Canada required for support of overseas commitments.

The Forces assigned include: three infantry brigade groups in Canada; the United Nations Emergency Force in the Middle East; the United Nations Force in Cyprus; one RCAF Reconnaissance Squadron; and one Transport Helicopter Platoon. Two of the brigade groups in Canada are being reorganized to perform a wide variety of roles and will be provided with air-portable equipment.

### 4 CIBG

4 CIBG is the Canadian contribution to NATO ground forces in Europe. The composition of the brigade is generally similar to the British Infantry brigade group. It also contains a surface-to-surface missile (Honest John) battery in addition to the normal artillery field regiment.

### 1 AIR DIVISION

1 Air Division is the Canadian contribution to the strike-reconnaissance forces available to SACEUR. The Division is operationally responsible to 4 Allied Tactical Air Force (4 ATAF) and has eight squadrons equipped with CF-104 *Super Starfighters* located at three airfields in France and Germany.

### MARITIME COMMAND

All Maritime forces, sea and air, on the Atlantic and Pacific Coasts have been placed under the Commander, Maritime Command, with Headquarters in Halifax, N.S. The Maritime Commander (Pacific), who is the Deputy Commander, has his Headquarters in Esquimalt, B.C.

The role of the Maritime Command is to defend Canada against attack from the sea; to provide anti-submarine defence in support of NATO (the Commander, Maritime Command is also Commander, Canadian Atlantic Sub-Area, in Allied Command Atlantic); and to conduct search and rescue operations on the East and West Coasts of Canada. A secondary role is to provide sea lift in support of Mobile Command.

The Maritime Forces are composed of the following ships: one aircraft carrier equipped with twin-engine *Tracker* aircraft and *Sea King* helicopters; 22 destroyers, escort-type; two supply ships; two submarines; and six small support and training vessels. There are four air squadrons and six naval air squadrons in service.

### AIR DEFENCE COMMAND

Air Defence Command participates jointly with the United States in the air defence of North America, through NORAD. It has functional control of three interceptor squadrons, two SAM squadrons, one SAGE control centre and two transcontinental radar lines. Operational control is exercised by HQ NORAD.

### AIR TRANSPORT COMMAND

The role of Air Transport Command is to provide air transport support to Canadian Forces everywhere, and to conduct search and rescue operations in the Eastern Search and Rescue Area (roughly, Ontario and Quebec). It has four squadrons operating short-range, long-range and troop-carrying aircraft and an Air Transport Unit operating *Caribou* and *Otter* aircraft from El Arish, Egypt, in support of UNEF.

### TRAINING COMMAND

The role of Training Command is to provide individual training for the Forces and to conduct search and rescue operations within the Western Search and Rescue Area (roughly, Manitoba, Saskatchewan and Alberta). All existing training units of the RCN, the Canadian Army and the RCAF where individual training is carried out have been placed under functional control of Training Command. The Canadian Services Colleges (RMC, Royal Roads and CMR), the Staff Colleges, and medical/dental training are under the direct control of Canadian Forces Headquarters. (See p. 1178.) Land/Air Warfare operational training is the responsibility of Mobile Command. Basic parachute training and basic fixed wing or helicopter pilot training are a Training Command responsibility.

#### THE CANADIAN FORCES COMMUNICATIONS SYSTEM (CFCS)

The role of the CFCS is to provide fixed communications networks for the Forces and to provide a national communications system for survival operations (civil defence). To carry out this role, CFCS commands all fixed communications installations within Canada.

#### THE RESERVE AND SURVIVAL ORGANIZATION

Administration of reserves is a responsibility of the Deputy Chief of Reserves (two-star general) at CFHQ. Command and administration of the Army Reserves is effected through 12 District Headquarters organized on a geographical basis. Although the Deputy Chief of Reserves has been given responsibility for Naval Reserve Divisions and RCAF Auxiliary Units, these report to the Deputy Chief through the Commander, Naval Divisions and functional Commanders, as appropriate.

The role of the Organization is to provide aid to the civil power, emergency forces for national survival, and provincial representation and to provide a training force to support the Regular Forces.

#### MATERIEL COMMAND

The role of Materiel Command is to provide logistic support of the Forces, i.e., procurement, provisioning and supply of materiel. To carry out this role, Materiel Command controls the operations of naval dockyards, ordnance depots, engineer depots, supply depots, repair depots and base workshops in Canada.

### Administration of Military Bases in Canada

Staffs and services required below Command Headquarters level to administer and support units based in a particular locality are being organized on Canadian Forces bases. The primary role of each base is to provide base-level administration and supporting services to those units located on or near the base. Each base has been allocated to a functional commander, to whom the base commander reports. The base commander is provided with sufficient staff, with representation from the four functional branches, to command and administer the base.

## Section 3.—Operations and Training of the Canadian Forces

### The Royal Canadian Navy

**The Fleet.**—As of December 1966, the RCN had 42 ships in commission and one submarine of the Royal Navy under RCN operational control at Halifax. HMCS *Ojibwa*, the first of three "O" Class conventional submarines, had completed her first year with the Atlantic Fleet; the second submarine, *Onondaga*, was due to commission in May 1967 and the third, *Okanagan*, was estimated for completion in early 1968. The aircraft carrier *Bonaventure* was undergoing extensive refit, scheduled for completion in August 1967. *Fraser*, the last of seven St. Laurent Class destroyers converted to helicopter operation, was ready for service in the fall of 1966, as was the fast hydrofoil craft, HMCS *Bras d'Or* (FHE 400). Work on *Terra Nova*, the first of seven ships of the Restigouche Class to be modernized, was under way, scheduled for completion in the spring of 1968; modernization of the second ship will start in March 1967 and the last ship will be completed in September 1969. Construction of the research vessel, *Quest*, which will serve on the East Coast, started in August 1966 and construction of two operational support ships, *Protecteur* and *Preserver*, began in December. A new class of four destroyer escorts having helicopter capabilities is projected for the future—construction of the first will commence in the fall of 1967. A former Bangor Class Fleet Minesweeper, *Granby*, now being utilized as a Clearance Diving Depot Ship, will also be disposed of in 1967 and will be replaced by an ocean escort to be re-named *Granby*.

**Training.**—The major training establishments of the RCN are CFB *Cornwallis* near Digby, N.S.; Fleet School *Shearwater* near Dartmouth, N.S.; Fleet School *Stadacona* at Halifax, N.S.; Fleet School *Hochelaga* at LaSalle, Que.; HMCS *Gloucester* near Ottawa, Ont.; and Fleet School *Naden* at Esquimalt, B.C.

Men and women entering the RCN receive their basic training at CFB *Cornwallis* where the courses are normally 14 weeks in length. English-language training is provided for French-speaking recruits at CFB *St. Jean*, the courses lasting up to a maximum of 21

weeks. Cadets entered under the Regular Officer Training Plan (ROTP) or College Training Plan (CTP) receive most of their early training at the Canadian Services Colleges (see p. 1178) or a Canadian university; those entered on a short-service appointment train in HMCS *Venture* at Esquimalt, B.C. All cadets receive practical training with the Fleet at various times of the year. A University Naval Training Division program provides junior officers for the RCN and the RCN Reserve. The cadets are required to complete two winter-training periods and two summer-training periods and certified specified courses.

**Royal Canadian Naval Reserve.**—The recruiting and training of officers and men of the RCN Reserve is conducted mainly through 16 Naval Divisions across Canada under the over-all command of the Commanding Officer Naval Divisions, with Headquarters at Hamilton, Ont. Naval Divisions are established in the following centres:—

St. John's, Nfld., HMCS *Cabot*  
 Halifax, N.S., HMCS *Scotian*  
 Saint John, N.B., HMCS *Brunswick*  
 Quebec, Que., HMCS *Montcalm*  
 Montreal, Que., HMCS *Donnacona*  
 Toronto, Ont., HMCS *York*  
 Ottawa, Ont., HMCS *Carleton*  
 Kingston, Ont., HMCS *Cataraqui*

Hamilton, Ont., HMCS *Star*  
 Windsor, Ont., HMCS *Hunter*  
 Port Arthur, Ont., HMCS *Griffon*  
 Winnipeg, Man., HMCS *Chippawa*  
 Saskatoon, Sask., HMCS *Unicorn*  
 Calgary, Alta., HMCS *Tecumseh*  
 Vancouver, B.C., HMCS *Discovery*  
 Esquimalt, B.C., HMCS *Malahat*

Naval Divisions, commanded by Reserve officers, provide both basic and specialized training for officers and men of the RCN Reserve. The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat during the summer months.

**Royal Canadian Sea Cadets.**—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supported by the RCN, consist of 174 corps, supervised by 15 naval officers responsible to the Commanding Officer Naval Divisions. Instruction is carried out by RCSCC officers. Two training establishments—*Cornwallis* on the East Coast and *Quadra* on the West Coast—accommodate officers and cadets for two-week training periods in the summer. In addition, selected cadets receive a seven-week training course at naval establishments. Sea experience is provided throughout the year in various types of ships of the RCN. As at October 1966, the strength of the corps was 1,015 officers and 9,221 cadets.

## The Canadian Army

**Operations in 1966.**—In fulfilment of military obligations under the North Atlantic Treaty, Canada continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, the major units of which were the Lord Strathcona's Horse (Royal Canadians), the 2nd Regiment Royal Canadian Horse Artillery, No. 1 Surface to Surface Missile Battery, 2nd Battalion The Royal Canadian Regiment, 1st Battalion Princess Patricia's Canadian Light Infantry (replaced by 2nd Battalion in late 1966), and the 2nd Battalion Royal 22e Regiment, constituted the Land Forces contribution to NATO in Germany. The Headquarters of the Brigade is at Soest and the married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn. The battalion group (The 1st Battalion The Black Watch [Royal Highland Regiment of Canada]) that Canada provided to form part of Allied Command Europe Mobile Forces (Land Component) was exercised in North Norway in early 1966. It is stationed in Canada but held in readiness for employment should the Mobile Force be activated.

The Canadian Armed Forces continued to provide forces in support of United Nations operations as follows: (1) A force of approximately 794 officers and men forms part of the UN Emergency Forces in the Middle East with tasks of providing engineer services, communications, stores, transport, workshop and postal services for the Force. (2) A force of 880 officers and men forms part of the UN Force in Cyprus; the Canadian contribution consisted of a reconnaissance squadron, an infantry battalion, a Canadian

Contingent Headquarters and a Canadian element for the UN Headquarters. (3) Canadian Armed Forces contributions to other UN missions included some 39 officers and men employed in Palestine, Kashmir and Korea (the UN India-Pakistan Observer Mission was concluded in the early spring of 1966). (4) A specially trained and equipped infantry battalion (1st Battalion The Canadian Guards) is maintained in Canada to provide a force for service in support of the UN in any part of the world on short notice.

In addition to its UN commitments, the Canadian Armed Forces, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet-Nam, Cambodia and Laos, continued to provide approximately 65 officers and men for truce supervisory duties in Indo-China.

Canadian Armed Forces training teams are being maintained in Ghana and Tanzania to assist in the training of armed forces of those countries. The Canadian Armed Forces provided 21 all ranks for the Ghana team and 69 all ranks for the Tanzania team. A number of officer cadets and other ranks from Ghana, Tanzania, Nigeria, Barbados, Jamaica, Trinidad and Tobago, Malaysia, and Zambia have received training in Canadian Forces schools.

**Training.**—Most of the recruit, basic and advanced training in support of the Canadian Army Regular takes place at schools under the supervision of Training Command. During 1966, a training enrolment of 6,794 recruits and the corps training of officers and men of the Army were carried out at regimental depots, units and schools; 348 officers completed promotion qualification examinations; 64 officers attended the Canadian Army Staff College; and 10 commenced courses at Commonwealth Staff Colleges. Qualifying courses for junior and senior NCOs were conducted at Training Command schools. Officers from the RCAF and RCN as well as officers from Australia, Belgium, Britain, Germany, India, Pakistan, Tanzania, Jamaica, Zambia and the United States attended courses at Canadian Schools.

English and French language training is available to all ranks. The R22eR Depot (Language Training Company) conducts six-month French language courses for English-speaking officers and NCOs, and a number of French-speaking recruits and potential NCOs receive English language training.

Trades training is given at schools and units. When required, the facilities of civilian and allied service schools are used to supplement training at service establishments.

Under an apprentice training program, selected young men are trained as soldier tradesmen and prepared for advancement to senior NCO ranks. During 1966, 83 apprentices were enrolled and 29 civilian teachers were employed to provide academic instruction for about 250 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted.

In 1966, the training of the Field Force took place under the direction of Mobile Command. Airborne continuation training was carried out by designated units in conjunction with unit exercises. The air transportable Ace Mobile Force Battalion participated in a winter exercise in Norway under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Air Training Centre at Rivers, Man., and courses in Arctic training at Camp Borden, Ont. Collective training for units in Canada was carried out at Camp Gagetown, N.B., and Camp Wainwright, Alta. All-arms training comprised sub-unit and unit training, and culminated in exercises at the Brigade Group level.

Under the Regular Officer Training Plan (ROTP), selected students are trained for commissions in the Canadian Forces at the Canadian Services Colleges (see p. 1178) and at Canadian universities and colleges that have university reserve units. Also, university reserve units form an integral part of the campus life at most universities. These are maintained primarily to produce officers for the Reserve components of the Canadian Forces and receive training similar to that given members of the ROTP.

**Canadian Army (Militia).**—The recently revised priority of roles of the Militia is: support of the Regular Army; provision of a training force; and assistance for internal security and the provision of specialists to assist in staffing national survival installations in times of national emergency. Militia training is intended to produce personnel and units well trained in the basic military skills and techniques of their corps and in the basic skills for survival operations. In consonance with these newly assigned roles, the Militia was extensively reorganized during the period November 1964 to March 1965. Based largely upon recommendations of the Ministerial Commission on the Reorganization of the Canadian Army (Militia), a total of 172 self-accounting units, having an approved establishment of 41,718 all ranks, is authorized. Concurrently, personnel and training policies were revised. Emphasis has been placed on youth, physical fitness, professional competence and vigorous leadership.

**Royal Canadian Army Cadets.**—The aim of the Army Cadet organization is to provide cadets with a sound knowledge of military fundamentals based on the qualities of leadership, patriotism and good citizenship. Planning and the supervision of organization, administration and training are carried out by the Canadian Army (Regular), and 136 officers and men are employed continuously on these duties. Training and administration of Army cadets is the responsibility of officers of the Cadet Services of Canada, a sub-component of the Reserves, and civilian instructors. As of Oct. 30, 1966, cadet and civilian instructors numbered 2,103.

Cadets, aged 14-18 inclusive, take a progressive three-year course in basic military subjects at their cadet corps and selected cadets are given training at summer camps. In 1966, 5,062 cadets attended six-week trades and specialist courses at Aldershot, N.S., Farnham, Que., Ipperwash and Camp Borden, Ont., Clear Lake, Man., and Vernon, B.C.; 1,688 cadets attended two-week cadet leader and special camps at Aldershot, N.S., Montreal, Que., Ipperwash, Ont., and Clear Lake and Rivers, Man.; 215 master cadets, one officer and six cadets from Britain attended the Banff National Army Cadet Camp, Alta., for four weeks; 58 cadets proceeded on an exchange of cadets between Canada and Barbados, Jamaica and Trinidad and Tobago during the summer of 1966 and one officer and six cadets attended the Outward Bound Course in Towyn, Wales; 388 cadet instructors attended qualifying courses of up to six weeks and 424 cadet and civilian instructors were employed in training and administrative duties at summer camps. As of October 1966, there were 55,928 cadets enrolled in 494 corps.

### The Royal Canadian Air Force

**Operations in 1966.**—The RCAF contribution to the air defence of North America during the year consisted of three CF-101B interceptor squadrons, two *Bomarc* surface-to-air missile squadrons and twenty-nine radar sites. Two of these radar sites were deactivated in the latter half of the year. These forces, together with the Distant Early Warning Line (DEW), operated under the operational control of North American Air Defence Command (NORAD). No. 1 Air Division, Canada's NATO contribution in Europe, operated with eight squadrons of CF-104 aircraft. Six of these squadrons were employed in the strike attack role and the other two were employed in the photo reconnaissance role.

The RCAF Maritime Air Command contributed four land-based maritime squadrons to the Maritime Defence of North America; three of these, based on the East Coast, are equipped with *Argus* aircraft, the largest and most modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was conducted throughout the year. The East Coast squadrons and the *Neptune* aircraft squadron on the West Coast participated in a number of national, international and NATO anti-submarine exercises, and maintained daily patrols and surveillance of ocean areas adjacent to the Canadian coastlines. Early in the year the RCAF Maritime Air Command became an integral part of the new integrated Maritime Command.

Air Transport Command (ATC) continued to provide support to the Air Division and to the Army Brigade in Europe using long-range *Yukon* and *Hercules* aircraft. Airlift support was provided to the UN Emergency Force Middle East and to the UN contingents in Cyprus. Flying units, operating *Caribou* and *Otter* aircraft, were maintained in Egypt and India/Pakistan in support of UNEF, UNMOGIP and UNIPOM. In addition, ATC provided a major contribution to the Zambian oil airlift. In Canada, ATC airlifted Department of National Defence personnel and cargo from coast-to-coast and into the Arctic regions. *Hercules* aircraft were employed for paratroop training of the Canadian Army, and T-33 aircraft carried out routine photographic missions for the Department. Search and rescue services were provided in the Canadian areas of responsibility. Throughout the year, the RCAF flew more than 6,000 hours on search and rescue missions involving missing persons, aircraft and marine vessels. Altogether, some 2,000 separate incidents were dealt with.

**Training.**—Each year the RCAF gives basic training to several thousand officers and men to meet retirements, releases and the introduction of new equipment. English language training on initial enlistment is given to French-speaking personnel—at St. Jean, Que., for officers and airmen. Course length is variable, up to a maximum of 21 weeks. Advanced trades training is given within the service, training on specialized equipment is obtained also from industrial firms, and some officers attend postgraduate courses at Canadian and United States universities. In addition, aircraft trades training is given to a number of trainees from developing countries.

Aircrew selection is carried out at Officers' Selection Unit, CFB Downsview, Ont. Indoctrination training for aircrew officer cadets takes place at Central Officers' School, Venture, B.C. RCAF pilots are given basic and advanced jet training at Moose Jaw, Sask., and Gimli, Man., and advanced multi-engine training at Portage la Prairie, Man. Radio navigators are trained at Winnipeg, Man. In the year ending Mar. 31, 1967, approximately 124 RCAF pilots and 80 radio navigators will complete training to "wings" standard; pilot training on piston engined aircraft will be provided for 37 RCN and six CA(R) officers. Under bilateral agreements, jet training will be provided for 35 Danish, 25 Norwegian and four Malaysian pilots, radio navigation training for three Norwegian and two Danish navigators, basic helicopter training for three Danish naval pilots and one Jamaican army officer, and piston engine training for 15 Malaysian and 31 Tanzanian pilots.

Indoctrination training for newly commissioned non-flying list officers is given at CFB Esquimalt, B.C. and technical training at CFB Clinton, Ont. Basic and advanced trades training for airmen is given at technical trades schools at Camp Borden and Clinton, Ont. Trade advancement training to help airmen improve their job proficiency and to qualify for higher trade grouping and pay is provided to Regular and Reserve personnel. Operational training on specific aircraft and equipment is given at field technical training units and operational training units situated throughout Canada. Semi-annual trade examinations are written under the direction of the Training Standards Establishment, Trenton, Ont.

**RCAF Reserves.**—The active sub-components of the RCAF Reserves are designated as the Auxiliary and the Primary Reserve.

The Auxiliary is made up of four Auxiliary Wing Headquarters located in Montreal, Toronto, Winnipeg and Edmonton and six Flying Squadrons located in the same cities; Wing Headquarters direct the operations, training and administration of the Flying Squadrons in their respective areas. All Flying Squadrons are equipped with the DHC-3 *Otter*. Their role is light transport, national survival, and search and rescue services. Light transport and national survival exercises are carried out in conjunction with Regular and Reserve formations of the RCN and the Canadian Army as well as the RCAF. Search and rescue operations are often carried out in accompaniment with civilian and RCAF Regular counterparts. In the event of emergency, these squadrons would be used to support civilian and military requirements.

The Primary Reserve is composed of Air Cadet Officers who staff the Royal Canadian Air Cadet Squadrons throughout Canada, of Manning Support Officers who are employed for 15 to 30 days each year in career counselling duties at RCAF recruiting units, and of University Squadron Staff Officers whose main function is to train members of the University Reserve Training Plan (URTP) during the academic year.

Each summer, approximately 130 first-year URTP undergraduates attend an officers training course at Reserve Officers School. Following this initial training, specialized training is provided in aeronautical engineering, armament, administration, accounts, construction engineering, mobile support equipment, recreation, supply or telecommunications. Second-year cadets continue the formal or contact training begun the previous year and a small number of outstanding cadets is selected for a third summer of contact training at a field unit.

**Royal Canadian Air Cadets.**—The Air Cadet movement operates on the basis of a partnership between the Air Cadet League of Canada, a voluntary civilian organization, and the Royal Canadian Air Force. The League sponsors and administers Air Cadet activities while the RCAF provides training personnel, syllabi and equipment and also assists the League in organization and administration. The objectives of air cadet training are to encourage air cadets to develop the attributes of good citizenship, to stimulate in them an interest in aviation and space technology and to help them develop a high standard of physical fitness, mental alertness and discipline. The authorized ceiling of cadet enrolment is 28,000; the strength at Oct. 1, 1966 was 25,596, attached to 369 squadrons across Canada.

During the summer of 1966, camps were conducted at Canadian Forces Bases at Greenwood, N.S., St. Jean, Que., Trenton, Ont., and Penhold, Alta., attended by more than 7,000 cadets and 858 officers and instructors. A seven-week Senior Leaders' Course was held for 240 cadets at Camp Borden, Ont. A Bush Familiarization Course, teaching the techniques of survival and ground search, was conducted at Namao, Alta., for 27 cadets. Under the International Exchange Visits Program for 1966, 62 cadets were exchanged with Austria, Belgium, Britain, Denmark, France, Italy, Israel, the Netherlands, Norway, Sweden, Switzerland, Turkey, the United States and West Germany.

About 250 senior air cadets receive flying training annually at flying clubs through RCAF sponsored scholarships; 74 additional scholarships were awarded by the Air Cadet League and other organizations in 1966.

## Section 4.—Services Colleges and Staff Training Colleges

**Canadian Services Colleges.**—The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and Collège militaire royal de Saint-Jean established at St. Jean, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and Collège militaire royal de Saint-Jean was opened in 1952. In 1959, the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound and balanced liberal scientific and military education leading to degrees in arts, science and engineering which are granted by the Royal Military College.

For cadets entering the Royal Military College and Royal Roads, the course is of four years duration. As the third and fourth years of the course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final

two years of the arts, science or engineering courses. For cadets entering Collège militaire royal de Saint-Jean, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

For admission to the Royal Military College of Canada and to Royal Roads, an applicant must have obtained senior matriculation or equivalent standing. For admission to Collège militaire royal de Saint-Jean, an applicant must have junior matriculation or equivalent. A candidate who has obtained a Bachelor of Arts degree at a classical college or has completed first year science or philosophy II at Collège Mont Saint-Louis may apply for entry into first year at Collège militaire royal de Saint-Jean. A candidate must be single, a Canadian citizen or British subject normally resident in Canada, and be physically fit. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry.

Most cadets entering the Services Colleges enrol under the Regular Officer Training Plan. Applicants accepted enrol according to their choice, as officer cadets in the Royal Canadian Navy, the Canadian Army or the Royal Canadian Air Force. Costs of tuition, uniforms, books, instruments and other fees are borne by the Department of National Defence and cadets are paid \$180 a month. Cadets are charged \$85 a month for board and lodging. On successfully completing their academic and military training, cadets are granted permanent commissions in the Regular Force.

A limited number of high school students may be selected to enter the Services Colleges on payment of tuition fees, etc. Graduates are granted commissions and serve in the Reserve components of the Forces. Young men who qualify for Dominion Cadetships also serve in a reserve capacity. These Cadetships are awarded by the Federal Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces or the Canadian Merchant Marine during hostilities. A maximum of 15 Dominion Cadetships may be awarded in any one year, five in each Service. Each is valued at \$580, which covers first-year fees.

During the 1966-67 academic year, 1,139 cadets were in attendance at the Services Colleges, 563 of them at the Royal Military College, 201 at Royal Roads and 375 at Collège militaire royal de Saint-Jean. Of the total, 253 were enrolled in the Navy, 409 in the Army and 477 in the Air Force.

**Staff Training Colleges.**—The Canadian Army Staff College at Kingston, Ont., gives an 11-month course for the training of officers for staff appointments. Although most of the student body is composed of Canadian Army Officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. Instruction is based upon the study of précis and references, demonstrations and lectures, and indoor and outdoor exercises. Aside from purely military subjects, the curriculum includes research and development, world affairs and lectures by prominent guest speakers.

The Canadian Forces College at Armour Heights, Toronto, Ont., consists of three colleges for the staff training of officers:—

*Staff College.*—Officers of Major (equivalent) rank take a 44-week course to prepare them for assumption of higher rank in the Canadian Armed Forces. Training emphasizes logical and precise written and oral expression of ideas; staff and administrative procedures; scientific and technical developments; and national and international current affairs.

*Staff School.*—Officers of Captain and Lieutenant (equivalent) rank take a 14-week course to prepare them to assume junior staff and administrative positions in the Canadian Armed Forces. Training emphasizes military administrative procedures; the conduct of correspondence; and civil and military organization. Students are also introduced to national and international current affairs.

*Extension School.*—Graduates of the Staff School are provided with extension courses in a variety of military and academic subjects.

National Defence College at Kingston, Ont., the senior defence college, provides an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and Federal Government departments attend, as well as a few representatives from industry. Lecturers are chosen from among the leaders in various fields in Canada and other countries. In addition, tours and visits to certain parts of Canada, the United States, Europe and the Middle East familiarize students with conditions and influences in their own and other countries.

### Section 5.—The Defence Research Board

The Defence Research Board, established in 1947, provides scientific assistance and advice to the Canadian Forces. It consists of a full-time chairman and vice-chairman, two or more *ex officio* members and nine other appointed members. The *ex officio* members are the Deputy Minister of National Defence, the President of the National Research Council and such other members as may be appointed by the Minister of National Defence as members representing the Canadian Forces. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research corps and seven research laboratories, and liaison offices at London, England, Washington, U.S.A., and Paris, France. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Defence Research Board is an integral and permanent part of the defences of the country. The Chairman is a member of the Defence Council. The Board's fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. Its efforts are concentrated upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as those of the National Research Council are used whenever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. Close collaboration is maintained with Canada's larger partners; specialization is made possible only through the willingness of Britain and the United States to exchange the results of their broader programs for the less numerous but nevertheless valuable benefits of Canadian research.

The Board operates seven specialized research and development laboratories which are concerned primarily with maritime warfare, guns, rockets and missiles as armaments, defence against missiles, research on the upper atmosphere using ground-based equipment as well as balloons, rockets and satellites, propulsion and propellants, telecommunications, geophysical studies of the Arctic, defence against atomic, chemical and biological weapons, studies of shock and blast, biosciences research and operational research. The Board also supports and organizes an extramural program of research in the universities and industry. Some 200 grants are awarded annually to Canadian university staff members for research on problems of defence interest and a special fund is used to place contracts with industry for research in selected fields.

Research on maritime warfare problems, particularly those relating to submarine detection and tracking, is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. Research and development of weapons and defence against various weapons is undertaken in co-operation with the Armed Services at several establishments, the largest of which is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities

include studies of defence against missiles, studies of the properties and application of infrared and other detection devices, exploration of the upper atmosphere with balloons and rockets, and the development of rocket propellants.

The Defence Research Telecommunications Establishment in Ottawa is concerned mainly with problems of communications which involve exploration of the ionosphere with ground-based equipment, with rockets and with satellites, and the applications of the science of electronics to military problems. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at two Defence Research Board establishments—the Defence Chemical, Biological and Radiation Laboratories at Ottawa, Ont., and the Suffield Experimental Station at Ralston, Alta.

The Defence Research Medical Laboratories near Toronto are concerned with bio-sciences research, chiefly with raising the operating efficiency of man working in the military environment, and includes such subjects as human physiology, experimental psychology and research on clothing.

Operational research is carried on by an integrated headquarters group which conducts long-range scientific analysis of future defence problems. The staff consists of operational research scientists provided by the Board and service officers. The Board also provides operational research scientists as members of teams in the various Service Commands.

Thus, the Board continues to support the fields of research that are of foremost interest to the Canadian Armed Services and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

## PART II.—DEFENCE PRODUCTION\*

Under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity, capability and materials are available to support the defence production program. The latter responsibility includes defence development and production-sharing with the United States, defence production export activities with NATO and other friendly countries, and co-operation in research, development and production programs within the NATO alliance. The Department also provides management and staff for the Canadian Commercial Corporation, a Crown company primarily responsible for the contracting in Canada for defence goods purchased by other governments and for contracting for supplies to meet Canadian requirements under External Aid Programs and other international agreements. The Department is responsible for planning and making other necessary arrangements for the immediate establishment of a war supplies agency, should there be a nuclear attack.

Implementing recommendations of the Royal Commission on Government Organization, the Government assigned to the Department of Defence Production the responsibility for forming a central purchasing and supply agency. The plan of organization for a future Department of Supply prepared by the Department requires the integration of the purchasing organization of Defence Production with supply functions. These supply functions were grouped with the regional purchasing function of Defence Production and Crown Assets Disposal Corporation to form the Canadian Government Supply Service.

\* Prepared in the Information Division, Department of Defence Production, Ottawa.

Procurement and construction contracts issued by the Department of Defence Production and Defence Construction (1951) Limited\* had a net value of \$713,415,000 in 1965 and \$452,530,000 in the first half of 1966. (The net value of contracts is made up of the value of new contracts issued as well as amendments that increased or decreased existing contracts.) The net value of contracts in 1965 according to the various sources for which they were issued was as follows:—

<i>Source</i>	<i>Net Value</i>	<i>P.C. of Total Value</i>
	\$	
Department of National Defence.....	473,534,358	66.38
Department of Defence Production (DDP Votes).....	1,462,662	0.21
Foreign Governments—		
United States.....	154,384,358	21.64
Britain.....	1,843,278	0.26
Other.....	8,929,910	0.83
Canadian Sources other than DND and DDP—		
External Aid.....	19,650,299	2.75
Other Government Departments.....	56,609,793	7.93
<b>TOTALS.....</b>	<b>713,414,658</b>	<b>100.00</b>

The \$473,534,000 in contracts placed on behalf of the Department of National Defence in 1965 was 4.8 p.c. below the value in 1964. There was an increase of \$14,358,000 in the shipbuilding program, one of \$6,531,000 in the armament program and one of \$6,062,000 in the electronics and communication equipment program. On the other hand there was a decrease of \$15,891,000 in the aircraft program and one of \$10,124,000 in the tank-automotive program.

Contracts placed outside Canada on behalf of the Department of National Defence in 1965 amounted to \$82,543,000, which was 17 p.c. of the total net value of prime contracts issued. Contracts valued at \$47,856,000 were placed in the United States, \$26,509,000 in Britain and \$8,177,000 in other countries. Expenditure on contracts placed in 1965 was \$462,732,000, an amount 15.3 p.c. lower than in 1964. Expenditure against aircraft programs decreased by \$32,301,000 or 16.9 p.c.; for electronics and communication equipment by \$12,477,000 or 11.0 p.c. and for tank-automotive by \$10,423,000 or 40.8 p.c.

Of the \$452,530,000 in contracts issued during the first half of 1966, \$298,264,000 or 66 p.c. was for the Department of National Defence and expenditures against prime contracts placed for that Department stood at \$262,005,000. The Department of Defence Production placed \$1,463,000 in contracts in 1965 and \$1,641,000 in the first half of 1966 against certain appropriations to assist Canadian defence industries. Revolving Fund contracts amounted to \$16,288,000 in 1965 and \$21,047,000 in the first half of 1966.

Contracts placed for all sources other than the Departments of National Defence and Defence Production totalled \$238,418,000 in 1965, of which \$154,384,000 was for the United States Government; \$56,610,000 for Canadian non-defence Government departments and agencies and \$19,650,000 for External Aid programs. For the first six months of 1966, contracts placed for the United States Government amounted to \$81,708,000, for Canadian non-defence Government departments and agencies, \$39,000,000; and for External Aid programs, \$21,000,000.

**Defence Production and Development Sharing.**—In 1965, \$259,500,000 worth of United States defence production-sharing contracts were placed with Canadian industry, an increase of 55 p.c. over 1964. The higher level in 1965 was accounted for by increased levels of incremental funding on the United States share of the joint Canada/United States F-104G MAP aircraft program and increased United States procurement in areas such as aircraft engine and airframe spares, aircraft components, vehicle components, electronic navigation equipment and communication equipment. The total United States defence production-sharing procurement in Canada during the seven years of the program was \$1,174,200,000.

\* Military construction is the prime function of Defence Construction (1951) Limited (see p. 147).

Prime contracts placed by the United States Government with the Canadian Commercial Corporation increased from 1,561 in 1964, to 1,707 in 1965, the latter having a total value of \$146,500,000. Subcontracts received directly by Canadian firms increased from 2,445 to 2,895 and were valued at \$109,800,000. Other prime contracts received directly from the United States Government by Canadian industry and other institutions had a value of \$3,221,505.

In 1965, continued assistance was given to Canadian industry under the development-sharing program for research and development projects of interest to the United States Services; 56 development-sharing contracts were in effect with expenditure totalling \$22,000,000.

**Co-operation in NATO and RDP (Research, Development and Production) and Exports Overseas.**—Canadian industry is encouraged to participate in supplying the defence needs of European and other countries in such areas as aircraft, training and navigational aids and engine spares. During 1965, 80 Canadian firms reported the receipt of \$67,736,000 in prime contracts and subcontracts from 43 NATO and other countries (excluding the United States), although over 95 p.c. of this business came from some 14 countries. Of this total, which was an increase of 11 p.c. over 1964, prime contracts accounted for \$46,076,000 and subcontracts placed in Canada by overseas countries, for \$21,660,000. The major purchases in this group were for *Caribou*, *Otter* and *Twin Otter* aircraft, F-104G simulator spares, rocket launchers and nosecon assemblies for the NATO M-72 light antitank weapon program, navigational equipment for the F-104G aircraft, position and homing indicators, spares for vehicles, aircraft engines and spares, MK44 torpedoes and spares, and a contribution to the shared development of the CL-89 surveillance drone.

During 1965, Canadian defence contracts placed in overseas countries on behalf of the Canadian Armed Services amounted to \$51,011,000, consisting of \$31,259,000 in prime contracts and \$19,752,000 in sub-contracts, so that Canada benefited from this exchange of defence contracting by \$16,725,000.

### PART III.—CIVIL EMERGENCY PLANNING (CIVIL DEFENCE)

The present arrangements for civil emergency planning in Canada took form in 1958 following an analysis by the Canadian Government of the kind of military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. This review led to a major re-arrangement of federal civil defence functions, together with an offer from the Federal Government to assume certain responsibilities previously borne by provinces and municipalities. The reorganization, which became effective on Sept. 1, 1959, was based on the principles that: (1) civil defence was properly a function or activity of government rather than a separate organization as such, and (2) this function should be divided into clearly defined tasks assigned to the appropriate levels of government, and at each governmental level made the responsibility of those departments or agencies best able to undertake and discharge them.

The Canada Emergency Measures Organization is the federal co-ordinating agency for all civil emergency planning. The Civil Emergency Measures Planning Order (Order in Council PC 1965-1041) dated June 8, 1965, defines the functions of the Canada Emergency Measures Organization, designates it as a department for administrative purposes and places it under the control and supervision of the Minister of Industry. Its functions include:—

- (1) the development of policies and a program to ensure the continuity of government in an emergency;
- (2) the co-ordination of civil emergency planning and training within the Federal Government;
- (3) in conjunction with provincial authorities, the development of policies and a program for the control of civil road transport resources;

- (4) the provision of assistance and guidance to provincial government and municipalities in respect of the preparation of civil emergency measures in matters that are not the responsibility of a department of the Federal Government;
- (5) the provision of general liaison with other countries and with NATO on matters relating to civil emergency measures; and
- (6) the responsibility for the direction and administration of the Canadian Emergency Measures College at Arnprior, Ont.

The Civil Emergency Measures Planning Order also defines the civil emergency powers, duties and functions of the Ministers of federal departments and agencies having immediate responsibilities in the event of a war emergency. Included in this category are the Departments of Agriculture, Defence Production, External Affairs, Finance, Fisheries, Justice, Labour, National Defence, National Health and Welfare, Post Office, Public Works, Transport, the Bank of Canada, Canadian Broadcasting Corporation, Central Mortgage and Housing Corporation and the Royal Canadian Mounted Police. In view of the Government Organization Act, 1966, it is anticipated the Department of Manpower and Immigration and the Department of the Solicitor General also will be included in this category.

Certain emergency functions of government are a projection of normal provincial peacetime responsibility. The following represent responsibilities of this kind, and are the concern of provincial authorities with such federal assistance as may be necessary:—

- (1) preservation of law and order and the prevention of panic by the use of provincial and municipal police and special constables, with whatever support is necessary and feasible from the Royal Canadian Mounted Police and the Armed Services at provincial request;
  - (2) control of road traffic, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout;
  - (3) reception services, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities;
  - (4) organization and control of medical services, hospitals and public health measures;
  - (5) maintenance, clearance and repair of highways;
  - (6) organization of municipal and other services for the maintenance and repair of water and sewerage systems; and
  - (7) organization of municipal and other fire fighting services, and control over and direction of these services in wartime, except in damaged or heavy fallout areas, where fire fighting services would be under the direction of the Army as part of the re-entry operation.

## PART I.—OFFICIAL SOURCES OF INFORMATION

### Section 1.—Books About Canada

This basic list of books about Canada, contributed by the National Library (February 1967), includes a selection of publications grouped alphabetically by author and arranged under the subject classifications of Biography, Country and People, Economics, External Relations, Government and Politics, History, Literature and the Arts, and General Reference Works. The selection represents many aspects of Canadian life, emphasizes the latest editions of books published within the past ten years, and includes titles issued in either or both English and French, accompanied by the publisher's address.

It should be noted that, although this list is now an annual feature of the Year Book, it is not a cumulative presentation; it is limited to about 480 titles, necessitating the omission of some items that appeared the preceding year to permit the inclusion of others. For additional titles, the reader should consult the lists of books in earlier Year Books or one or more of the bibliographical collections listed below under the heading "General Reference Works", particularly the monthly or annual editions of *Canadiana* published by the National Library.

### Biography

- BARNARD, Julianne. *Mémoires Chapais*. Montréal, Fides, 1961-64. 3 v.  
 BARRETTE, Antonio. *Mémoires*. T. 1. Montréal, Beauchemin, 1966. 448 p.  
 BEAL, J. R. *The Pearson phenomenon*. Toronto, Longmans, 1964. 210 p.  
*Biographies canadiennes-françaises*. 20e éd. Montréal, 1965. 1347 p.  
 BISHOP, Morris. *Champlain; the life of fortitude*. Toronto, McClelland and Stewart, 1963. 308 p. (Carleton library, no. 4)  
 BISHOP, W. A. *The courage of the early morning, a son's biography of a famous father: the story of Billy Bishop*. Toronto, McClelland and Stewart, 1965. 211 p.  
 BOUCHARD, T. D. *Mémoires de T. D. Bouchard*. Montréal, Beauchemin, 1960. 3 v.  
 BRADDON, Russell. *Roy Thomson of Fleet Street*. London, Collins, 1965. 396 p.

- BROWN, Florence M. *Breaking barriers; Eric Brown and the National Gallery*. Ottawa, Society for Art Publications, 1964. 113 p.
- CAMPBELL, Marjorie Wilkins. *McGillivray, Lord of the Northwest*. Toronto, Clarke, Irwin, 1962. 337 p.
- CAMPBELL, Marjorie Wilkins. *No compromise; the story of Colonel Baker and the CNIB*. Toronto, McClelland and Stewart, 1965. 217 p.
- Canadian writers. Écrivains canadiens*. A biographical dictionary edited by—un dictionnaire biographique rédigé par Guy SYLVESTRE, Brandon CONRON, C. F. KLINGCK. New ed. rev. and enl. Nouv. éd. rev. et augm. Toronto, Ryerson Press, 1966. 186 p. (Articles by French language authors are in French.)
- CARR, Emily. *Hundreds and thousands; the journals of Emily Carr*. Toronto, Clarke, Irwin, 1966. 332 p.
- COWAN, John. *Canada's Governors-General, Lord Monck to General Vanier*. Centennial ed. Toronto, York Pub. Co., 1965. 260 p.
- CREIGHTON, Donald. *John A. Macdonald*. Toronto, Macmillan, 1952-55. 2 v.
- DAWSON, R. M. *William Lyon Mackenzie King; a political biography*. Vol. 1, 1874-1923. Vol. 2, 1923-1932 by H. Blair NEATBY. Toronto, University of Toronto Press, 1958-63. 2 v.
- Dictionary of Canadian biography*. General editor, G. W. BROWN. Directeur adjoint, Marcel TRUDEL. Vol. 1. 1000 to 1700. Toronto, University of Toronto Press, 1965. (To be complete in 24 v.)
- Dictionnaire biographique du Canada*. General editor, G. W. BROWN. Directeur adjoint, Marcel TRUDEL. T. 1. 1000 à 1700. Québec, Presses de l'Université Laval, 1966. (L'ouvrage entier doit comprendre 24 v.)
- DRURY, E. C. *Farmer premier; memoirs of the Honourable E. C. Drury*. Toronto, McClelland and Stewart, 1966. 198 p.
- FALMAGNE, Thérèse. *Un marquis du grand siècle, Jacques-René de Brisay de Denonville, gouverneur de la Nouvelle-France 1637-1710*. Montréal, Éditions Leméac, 1965. 341 p.
- GAGNON, M. A. *Le ciel et l'enfer d'Arthur Buies*. Québec, Presses de l'Université Laval, 1965. 360 p. (Vie des lettres canadiennes, 2)
- GILBERT, Heather M. *Awakening continent; the life of Lord Mount Stephen*. Vol. 1. 1829-91. Aberdeen, Aberdeen University Press, 1965. 314 p. (Vol. 2 will not be completed until the private papers of J. J. Hill are made available in 1981.)
- GRAHAM, Roger. *Arthur Meighen; a biography*. Toronto, Clarke, Irwin, 1960-65. 3 v.
- GRAY, J. M. *Lord Selkirk of Red River*. Toronto, Macmillan, 1963. 388 p.
- Great Canadians; a century of achievement*. Selected by Vincent MASSEY and others. Illustrated by Franklin ARBUCKLE. Toronto, Canadian Centennial Pub. Co., 1965. 122 p. (The Canadian centennial library)
- GRENON, Hector. *Chroniques vécues; des modestes origines d'une élite urbaine*. T. 1. Montréal Éditions de l'Homme, 1966. 494 p.
- INNIS, Mary Quayle, ed. *The clear spirit; twenty Canadian women and their times*. Toronto, University of Toronto Press, 1966. 304 p. (Includes two chapters in French)
- LAMONTAGNE, Roland. *La Galissonnière et le Canada*. Montréal, Presses de l'Université de Montréal, 1962. 104 p.
- LA ROQUE DE ROQUEBRUNE, Robert. *Quartier Saint-Louis; récit par Robert de Roquebrune pseud*. Montréal, Fides, 1966. 199 p. (Collection du nénuphar, 30) (Suite de Testament de mon enfance)
- LUCHKOVICH, Michael. *A Ukrainian Canadian in Parliament; memoirs of Michael Luchkovich*. Toronto, Ukrainian Canadian Research Foundation, 1965. 128 p. (Ukrainian Canadian Research Foundation. The Canadian centennial series, 2)

## Section 2.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources of information with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces and data may be obtained concerning the individual provincial efforts in these fields from the respective provincial government departments. However, certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole. The Government of Canada, while not administering the resources within the provincial boundaries,

co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions on forest research, forest fire protection and reforestation offer good examples.

Certain Federal Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Fisheries, Forestry, Indian Affairs and Northern Development, and Energy, Mines and Resources, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, although several of the latter have publicity branches.

Thus, inquiries for information of a statistical nature should be forwarded to the Information Division, Dominion Bureau of Statistics, Ottawa. Inquiries to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments and agencies of government which are listed, with their functions, at pp. 130-150 of this publication. Inquiries relating to provincial efforts may be directed to the provincial government department concerned. Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Indian Affairs and Northern Development, Ottawa.

### Section 3.—Sale of Official Publications

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7(e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

The Queen's Printer is the national sales agent in Canada for publications issued by the United Nations; the United Nations Educational, Scientific and Cultural Organization; the World Health Organization; the Food and Agriculture Organization; the Organization for Economic Co-operation and Development; the International Atomic Energy Agency;

the International Civil Aviation Organization; the Council of Europe; the Commonwealth Economic Committee; the Organization of American States (Pan American Union); the General Agreement on Tariffs and Trade; the New Zealand Government; the International Labour Organization; the World Meteorological Organization; and the International Telecommunication Union.

Canadian Government and international organizations publications may be obtained from Queen's Printer bookstores located in Ottawa, Toronto, Montreal, Winnipeg and Vancouver (see imprint on the reverse side of the title page), or by mail from the Queen's Printer, Ottawa.

**Dominion Bureau of Statistics Publications.**—The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications. Reports of the Bureau cover all aspects of the national economy; the *Canada Year Book* and Official Handbook *Canada* constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

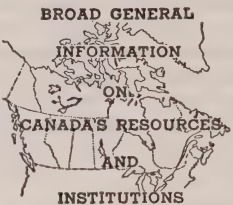

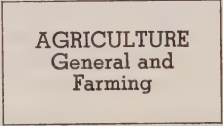

DBS publications are listed with their prices in the Queen's Printer's Catalogues of *Canadian Government Publications*. The *DBS Daily Bulletin* and *Weekly Bulletin*, prepared by the Information Division, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau; the annual subscription price of each is \$1. Subscription orders for DBS publications or orders for single copies should be addressed to the Publications Distribution Unit, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

**Provincial Government Publications.**—Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland.....	St. John's	Ontario.....	Toronto
Prince Edward Island.....	Charlottetown	Manitoba.....	Winnipeg
Nova Scotia.....	Halifax	Saskatchewan.....	Regina
New Brunswick.....	Fredericton	Alberta.....	Edmonton

## PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (\*) are available in reprint form from the Information Division, Dominion Bureau of Statistics.

## PART IV.—FEDERAL LEGISLATION, 1966-67

Legislation passed in the first session of the Twenty-seventh Parliament from Jan. 18, 1966 to Mar. 22, 1967 (the date of Easter adjournment) is outlined in the following statement. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the *Statutes of Canada* in the given volume and chapter.

**Legislation of the First Session of the Twenty-seventh Parliament,  
Jan. 18, 1966 to Mar. 22, 1967\***

Subject, Chapter and Date of Assent	Synopsis
14-15 ELIZ. II	
<b>Agriculture—</b>	
<b>1966</b>	
17 May 12	<i>An Act to amend the Farm Credit Act</i> increases the capital of the Farm Credit Corporation from \$24,000,000 to \$40,000,000, the effect of which is to raise the limit of the amount that the Corporation may borrow from the Consolidated Revenue Fund from \$600,000,000 to \$1,000,000,000.
34 July 11	<i>The Canadian Dairy Commission Act</i> authorizes the establishment of a three-member Commission, the function of which is to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality.
37 July 11	<i>An Act to amend the Crop Insurance Act</i> increases the maximum contribution payable by Canada on crop insurance premiums; increases the maximum amount of the insurance that may be effected on any crop; authorizes contributions to a province providing insurance coverage against losses arising from the destruction of fruit trees or perennial plants or losses arising when seeding of land intended to be used to grow an insured crop is prevented by weather or other hazards; and makes other administrative amendments.
52 Nov. 17	<i>The Livestock Feed Assistance Act</i> authorizes the establishment of a Canadian Livestock Feed Board for the purpose of assisting livestock feeders in Eastern Canada and British Columbia; it empowers the Board to make payments related to the cost of feed grain storage and transportation for the benefit of livestock feeders, to ensure the availability of adequate supplies of feed grain and to enter into direct marketing operations in feed grain; the Act provides for the administration of the Board and for expenditures in connection with its operations.
<b>Economic Development—</b>	
<b>1966</b>	
11 May 12	<i>An Act to amend the Agricultural Rehabilitation and Development Act</i> extends the application of the Act to all rural areas in Canada where projects of the nature provided for under the Act can be advantageously undertaken whether or not the area in question is in whole or in part an agricultural area. The name of the Act is changed to "An Act to provide for the rehabilitation and development of rural areas in Canada".
31 July 11	<i>An Act to amend the Atlantic Development Board Act</i> increases the amount that the Minister of Finance may credit the Atlantic Development Fund from \$100,000,000 to \$150,000,000 and provides that Board revenues may be credited to the Fund; authority of the Board is extended to undertake projects alone or jointly with provinces or agencies thereof.
41 July 11	<i>The Fund for Rural Economic Development Act</i> authorizes the establishment of a fund for the economic and social development of special rural development areas and an advisory board for the administration of the Fund, the total of payments from which will not exceed \$50,000,000; the Act also authorizes the entering into agreements with the provinces for comprehensive rural development programs.
<b>1967</b>	
80 Mar. 10	<i>An Act to amend the Fund for Rural Economic Development Act</i> increases to \$300,000,000 the total amount that may be charged to the Fund for purposes of the Act.

\* Parliament adjourned Mar. 22, 1967; the first session continued on Apr. 3, 1967.

**Legislation of the First Session of the Twenty-seventh Parliament,  
Jan. 18, 1966 to Mar. 22, 1967—continued**

Subject, Chapter and Date of Assent			Synopsis
<b>Finance—</b>			
<b>1966</b>			
1	Feb. 8		<i>Appropriation Act No. 1, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1966.
3	Mar. 9		<i>Appropriation Act No. 2, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1966 (Main Supply).
5	Mar. 31		<i>Appropriation Act No. 3, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
6	Mar. 31		<i>Appropriation Act No. 4, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1966.
7	Mar. 31		<i>An Act to amend the Bank Act and the Quebec Savings Banks Act</i> extends the charters of existing banks to Dec. 1, 1966.
12	May 12		<i>An Act to amend the Bills of Exchange Act</i> permits banks to pay cheques on a Saturday or legal holiday on which they are open for business and enables banks to close on what would ordinarily be a business day, permitting them to comply with labour legislation and adjust to the business customs of a community. Adjustments were made with respect to certain legal holidays.
13	May 12		<i>An Act to amend the Bretton Woods Agreements Act</i> authorizes Canada's acceptance of an increase in its quota to the International Monetary Fund and a corresponding increase in its subscriptions to the resources of the International Bank for Reconstruction and Development.
20	June 2		<i>Appropriation Act No. 5, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
29	July 11		<i>Appropriation Act No. 6, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
30	July 11		<i>Appropriation Act No. 7, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
51	Nov. 17		<i>Appropriation Act No. 8, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
54	Nov. 28		<i>An Act to amend the Bank Act and the Quebec Savings Banks Act</i> extends the charters of existing banks to Jan. 1, 1967.
55	Nov. 30		<i>Appropriation Act No. 9, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967 (Main Supply).
56	Dec. 14		<i>Appropriation Act No. 10, 1966</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
<b>1967</b>			
70	Feb. 17		<i>The Canada Deposit Insurance Corporation Act</i> authorizes the establishment of the Canada Deposit Insurance Corporation, the objects of which are to provide, for the benefit of persons having deposits with member institutions, insurance against loss of such deposits, to provide deposit insurance for federal institutions and to enter into contracts of deposit insurance with provincial institutions; the Corporation is authorized to examine into the affairs of member institutions and to accumulate, manage and invest a deposit insurance fund and other funds accumulated as a result of its operations.
73	Mar. 1		<i>Appropriation Act No. 1, 1967</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
83	Mar. 10		<i>An Act to amend the Small Businesses Loans Act</i> extends the life of the Act to Dec. 31, 1969; extends the provisions to cover small construction, transportation or communications businesses; removes certain restrictions; increases the maximum annual gross revenue limit of a small business from \$250,000 to \$500,000 and increases the aggregate principal amount of all loans made to \$300,000,000.
85	Mar. 23		<i>Appropriation Act No. 2, 1967</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1967.
86	Mar. 23		<i>Appropriation Act No. 3, 1967</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1968.

**Legislation of the First Session of the Twenty-seventh Parliament,  
Jan. 18, 1966 to Mar. 22, 1967—continued**

Subject, Chapter and Date of Assent	Synopsis
<b>Finance—concluded</b>	
<b>1967</b>	
87 Mar. 23	<i>The Bank Act</i> is the decennial revision of the Bank Act, empowering the chartered banks to carry on business under revised legislation for a further period of ten years.
88 Mar. 23	<i>An Act to amend the Bank of Canada Act</i> authorizes the Government, under specified conditions, to give the Bank a directive concerning monetary policy, authorizes the imposition of a minimum variable secondary reserve requirement for the chartered banks and makes other technical changes.
89 Mar. 23	<i>The Federal-Provincial Fiscal Arrangements Act, 1967</i> authorizes the making of certain fiscal payments to provinces, authorizes the entry into tax collection agreements with provinces, and amends the Established Programs (Interim Arrangements) Act.
93 Mar. 23	<i>The Quebec Savings Bank Act</i> is the decennial revision of the Quebec Savings Banks Act, empowering these savings banks to carry on business under revised legislation for a further period of ten years.
<b>Government—</b>	
<b>1966</b>	
2 Feb. 23	<i>An Act to extend the time for consideration of objections pursuant to section 20 of the Electoral Boundaries Readjustment Act with respect to the reports of commissions established for the decennial census taken in the year 1961.</i>
21 June 2	<i>The Newfoundland Additional Financial Assistance Act, 1966</i> provides for the payment to the Province of Newfoundland of an annual grant of \$8,000,000, being additional financial assistance contemplated by Term 29 of the Terms of Union of Newfoundland with Canada.
22 June 2	<i>An Act to amend the Northwest Territories Act</i> increases the number of elected members of the Council of the Northwest Territories from four to seven; increases to \$5,000 per annum the maximum indemnity of elected members, provides for the payment of \$3,500 annually to appointed members, and exempts part of these indemnities from income tax; provides for the payment of reasonable travelling and living expenses for members attending sessions of the Council; and makes administrative and financial provisions in connection therewith, as well as other administrative changes.
25 June 16	<i>The Government Organization Act, 1966</i> authorizes the establishment of several new Departments of Government and the offices of the Ministers of those Departments, setting out their respective powers, duties and functions; administrative and financial matters related or incidental thereto are provided for.
28 June 16	<i>An Act to amend the Yukon Act</i> increases to \$5,000 per annum the maximum indemnity payable to members of the Council of the Yukon Territory, part of which is exempt from income tax, and provides for an annual indemnity of \$300 to members of the advisory committee on finance; provides for payment of reasonable travelling and living expenses for Council and committee members attending sessions or sittings; and makes administrative and financial provisions in connection therewith, as well as other administrative changes.
57 Dec. 14	<i>The Manitoba-Saskatchewan Boundary Act, 1966</i> declares a portion of the boundary line surveyed and marked on the ground under the direction of Commissioners appointed therefor to be the boundary line between the Provinces of Manitoba and Saskatchewan.
58 Dec. 14	<i>The Saskatchewan-Northwest Territories Boundary Act, 1966</i> declares the boundary line surveyed and marked on the ground under the direction of Commissioners appointed therefor to be the boundary between the Province of Saskatchewan and the Northwest Territories.
61 Dec. 21	<i>The Manitoba-Northwest Territories Boundary Act, 1966</i> declares the boundary line surveyed and marked on the ground under the direction of the Commissioners appointed therefor to be the boundary line between the Province of Manitoba and the Northwest Territories.
<b>1967</b>	
71 Feb. 23	<i>The Public Service Employment Act</i> replaces the Civil Service Act; it retains the merit system of appointment and promotion as well as the type of job security long in effect, but extends them to prevailing rate employees and ships' officers and crews; the Civil Service Commission becomes the Public Service Commission.

**Legislation of the First Session of the Twenty-seventh Parliament,  
Jan. 18, 1966 to Mar. 22, 1967—continued**

Subject, Chapter and Date of Assent	Synopsis
<b>Government—concl.</b>	
<b>1967</b>	
72 Feb. 23	<i>The Public Service Staff Relations Act</i> provides for the establishment of a system of collective bargaining applicable to employees in the public service of Canada, for the resolution of disputes that may arise in the negotiation of collective agreements, and for grievance procedures; it authorizes the establishment of a Public Service Staff Relations Board to be responsible for the administration of the Act and the constitution and appointment of other authorities and employees as are required.
74 Mar. 1	<i>An Act to amend the Financial Administration Act</i> amends certain provisions of the Act relating to the functions of the Treasury Board in order to define the expanded role envisaged for the Board in relation to the effective control and management of the public service, taking into account the institution of collective bargaining within the public service.
81 Mar. 10	<i>The Governor General's Retiring Annuity Act</i> provides for the payment of a retiring annuity to the Governor General of Canada.
84 Mar. 23	<i>The Statutory Salaries Revision Act, 1967</i> provides for the revision of certain salaries fixed by statute.
<b>Health and Welfare—</b>	
<b>1966</b>	
42 July 11	<i>The Health Resources Fund Act</i> provides for the establishment of a Health Resources Fund to assist provinces in the acquisition, construction and renovation of health training facilities and research institutions.
45 July 15	<i>The Canada Assistance Plan</i> authorizes the making of contributions by Canada toward the cost of programs for the provision of assistance and welfare services to and in respect of persons in need.
64 Dec. 21	<i>The Medical Care Act</i> authorizes the payment of contributions by Canada toward the cost of insured medical care services incurred by provinces pursuant to provincial medical care insurance plans.
65 Dec. 21	<i>An Act to amend the Old Age Security Act</i> provides for the payment of a guaranteed income supplement to certain Old Age Security pensioners up to a maximum of 40 p.c. of the amount of pension payable under the Act; it also provides for the determination of the income of a pensioner for purposes of the supplement and other related matters.
<b>Justice—</b>	
<b>1966</b>	
4 Mar. 31	<i>An Act to amend the Admiralty Act</i> authorizes the appointment of up to three deputy judges, each with full jurisdiction of a District Judge in time of the latter's incapacity; it also extends the area of jurisdiction of sheriffs as Marshals of the Court and provides that deputy sheriffs are to be Deputy Marshals of the Court.
8 Mar. 31	<i>An Act to amend the Judges Act</i> authorizes the provision of salaries for eight additional judges.
23 June 16	<i>An Act to amend an Act to amend the Combines Investigation Act and the Criminal Code</i> further extends the exemption of British Columbia fishermen or persons and associations engaged in the buying or processing of fish in that province from the provisions of the Act.
32 July 11	<i>An Act to amend the Bankruptcy Act</i> is an interim measure intended to provide remedies in situations where it has been shown by experience that abuses of the bankruptcy process are most likely to occur, to correct abuses that have occurred in the administration of small estates and to provide special measures for the orderly payment of debts.
39 July 11	<i>An Act to amend the Exchequer Court Act</i> is a minor amendment eliminating the use of taxation stamps in the payment of fees to the Registrar of the Exchequer Court of Canada.
44 July 11	<i>The Statute Law (Superannuation) Amendment Act, 1966</i> provides, because of the contributions required under the Canada Pension Plan, for a reduction in the contributions to certain superannuation or pension funds or plans established by Parliament and for the correlation of pensions or annuities payable under those funds or plans with the Canada Pension Plan; extends the portability provisions of certain of those plans; raises the limit on the amount of the supplementary death benefit payable to Public Service employees and members of the Canadian Forces; and makes related administrative amendments.

**Legislation of the First Session of the Twenty-seventh Parliament,  
Jan. 18, 1966 to Mar. 22, 1967—continued**

Subject, Chapter and Date of Assent	Synopsis
<b>Justice—concluded</b>	
<b>1967</b>	
68 Feb. 9	<i>An Act to amend the Judges Act</i> authorizes the provision of salaries for two additional judges.
76 Mar. 1	<i>An Act to amend the Judges Act</i> revises judicial salaries and makes other amendments respecting travelling expenses, etc.
<b>Labour—</b>	
<b>1966</b>	
24 June 16	<i>An Act to amend the Fair Wages and Hours of Labour Act</i> changes the general standard of hours of work on Federal Government contracts from 44 hours in a week to 40 hours, provides that no wage rate less than \$1.25 an hour shall be paid for work under such contracts, thus achieving consistency with the Canada Labour (Standards) Code.
27 June 16	<i>The Training Allowance Act, 1966</i> is an Act respecting allowances to persons being trained under technical and vocational training programs; it authorizes the entering into agreements with the provinces in connection therewith and contains certain changes relating to the administration of the Unemployment Insurance Act.
49 July 15	<i>The St. Lawrence Ports Working Act</i> ensures that the conclusions of the industrial inquiry commission, set up to inquire into working conditions at the ports of Montreal, Trois-Rivières and Quebec, be implemented, as recommended by the mediator.
59 Dec. 14	<i>An Act to amend the Canada Labour (Standards) Code</i> makes provision for general holidays and annual vacations in respect of employment within the jurisdiction of Parliament not previously covered in the Code because the employment is customarily provided for the benefit of a number of separate employers; this is particularly applicable to the stevedoring industry.
62 Dec. 21	<i>The Canada Labour (Safety) Code</i> sets out the duties of employers and employees respecting the prevention of employment injury in federal works, undertakings and businesses.
<b>1967</b>	
92 Mar. 23	<i>The Pension Benefits Standards Act</i> refers to pension plans organized and administered for the benefit of persons employed in connection with certain federal works, undertakings and businesses.
<b>Revenue—</b>	
<b>1966</b>	
14 May 12	<i>The Canada-United Kingdom Income Tax Agreement Act, 1966</i> implements an Agreement between Canada and the United Kingdom for the avoidance of double taxation with respect to taxes on certain classes of income and implements a Supplementary Income Tax Agreement between Canada and Sweden.
38 July 11	<i>An Act to amend the Customs Tariff</i> implements the Customs Tariff Resolution presented in the Budget Speech of Mar. 29, 1966.
40 July 11	<i>An Act to amend the Excise Tax Act</i> implements the Excise Tax Act Resolution presented in the Budget Speech of Mar. 29, 1966.
43 July 11	<i>The Public Utilities Income Tax Transfer Act</i> authorizes the Minister of Finance to transfer to the provinces a proportion of the income tax payable by certain public utility companies.
47 July 15	<i>An Act to amend the Income Tax Act</i> implements the Income Tax Resolution presented in the Budget Speech of Mar. 29, 1966.
<b>1967</b>	
75 Mar. 1	<i>The Canada-Trinidad and Tobago Income Tax Agreement Act, 1967</i> implements agreements for the avoidance of double taxation with respect to income tax between Canada and Trinidad and Tobago, Canada and Ireland, Canada and Norway and Canada and the United Kingdom, and implements a supplementary income tax convention between Canada and the United States.
79 Mar. 10	<i>An Act to amend the Excise Tax Act and the Old Age Security Act</i> increases the sales tax from 8 p.c. to 9 p.c. on all goods except building materials and other goods previously exempt, and also raises the old age security tax payable on the taxable income of an individual from \$120 to \$240.

**Legislation of the First Session of the Twenty-seventh Parliament,  
Jan. 18, 1966 to Mar. 22, 1967—continued**

<b>Revenue—concluded</b>	
<b>1967</b>	
91 Mar. 23	<i>An Act to amend the Income Tax Act and to repeal the Canadian Vessel Construction Assistance Act</i> incorporates in the Income Tax Act the provisions analogous to those in the Canadian Vessel Construction Assistance Act and repeals the latter. It also implements items of the Income Tax Resolution dealing with deferred profit-sharing and supplementary benefit plans.
<b>Scientific and Industrial Research—</b>	
<b>1966</b>	
19 May 12	<i>The Science Council of Canada Act</i> provides for the establishment of a Science Council of Canada.
26 June 16	<i>An Act to amend the Research Council Act</i> changes the formal title of the Council to "National Research Council of Canada", authorizes the payment of remuneration to members for duties performed in addition to their regular duties, authorizes temporary appointments and the establishment of a national science library, and makes relative administrative changes.
<b>1967</b>	
82 Mar. 10	<i>The Industrial Research and Development Incentives Act</i> provides general incentives to industry for the expansion of scientific research and development in Canada and effects certain related amendments to the Income Tax Act.
<b>Trade—</b>	
<b>1966</b>	
16 May 12	<i>An Act to amend the Export and Import Permits Act</i> extends the duration of the Act for a further period of three years, to July 31, 1969.
63 Dec. 21	<i>An Act to amend the Export Credits Insurance Corporation</i> to issue unconditional guarantees to banks in connection with transactions insured by the Corporation and to enter into agreements with foreign governments in connection with certain transactions and reschedule debts owed to the Corporation in respect thereof; it increases from \$400,000,000 to \$500,000,000 the maximum liability to the Corporation at any time.
<b>Transportation—</b>	
<b>1966</b>	
9 Mar. 31	<i>The Milltown Bridge Act</i> authorizes the construction of a bridge across the St. Croix River between the Province of New Brunswick and the State of Maine.
10 May 12	<i>An Act to amend the Aeronautics Act</i> authorizes the imposition of charges for the use of Department of Transport facilities and services and of charges for their availability to aircraft during flights within Canada; authorizes the establishment of boards to investigate aircraft accidents and provides for the payment of expenses of witnesses appearing before such boards; provides for an increase in the membership of the Air Transport Board, setting terms of office and retirement age; and makes other administrative changes.
15 May 12	<i>An Act respecting the construction of a line of railway in the Province of Ontario by Canadian National Railway Company</i> from the vicinity of Amesdale on the Redditt Subdivision of the CNR in a northwesterly direction for a distance of approximately 68 miles to a point in the vicinity of Bruce Lake in the District of Kenora.
35 July 11	<i>An Act respecting the construction by Canadian National Railway Company of a line of railway in the Province of Manitoba from the vicinity of Stall Lake on the Chisel Lake Subdivision of the CNR in a northeasterly direction for a distance of approximately 12 miles to a point in the vicinity of Osborne Lake in The Pas Mining District of that Province, and of a line of railway in the Province of Saskatchewan from the vicinity of Watrous on the Watrous Subdivision of the said Railway in a northeasterly direction for a distance of approximately 18 miles to a point in the vicinity of Guernsey in the Regina Mining District of that Province.</i>
50 Sept. 1	<i>The Maintenance of Railway Operation Act, 1966</i> provides for the resumption of operations of railways and for the settlement of the existing dispute with respect to terms and conditions of employment between railway companies and their employees.

**Legislation of the First Session of the Twenty-seventh Parliament,  
Jan. 18, 1966 to Mar. 22, 1967—concluded**

Subject, Chapter and Date of Assent	Synopsis
<b>Transportation— concluded</b>	
<b>1967</b>	
67 Feb. 9	<i>The Canadian National Railways Financing and Guarantee Act, 1965-1966</i> authorizes the provision of money to meet certain capital expenditures of the CNR system for the period Jan. 1, 1965 to June 30, 1967 and authorizes the guarantee of certain securities to be issued by the CNR.
69 Feb. 9	<i>The National Transportation Act</i> defines and implements a national transportation policy for Canada and establishes the Canada Transport Commission as the national transportation authority to effect the objectives of that policy.
<b>Miscellaneous—</b>	
<b>1966</b>	
18 May 12	<i>The Fisheries Development Act</i> provides for the development of the commercial fisheries of Canada through the undertaking of federal or federal-provincial projects and the financing thereof and provides for the establishment of advisory committees for carrying out the purposes of the Act.
33 July 11	<i>An Act to amend the Canada Student Loans Act</i> increases provincial allocations for the loan year commencing July 1, 1965 and subsequent years by authorizing a supplementary allocation to a province applying for it amounting to 20 p.c. of the basic loan for the year; the annual basic loan is increased to \$58,000,000.
36 July 11	<i>The Company of Young Canadians Act</i> provides for the establishment of the Company of Young Canadians, the objects of which are to support, encourage and develop programs for social, economic and community development in Canada and abroad through voluntary service.
42 July 15	<i>An Act to amend the Canadian Corporation for the 1967 World Exhibition Act</i> increases the protection afforded to marks of the Corporation and the official symbol of the Exhibition in their application to goods or wares, and vests in the Corporation copyright in reproductions of the site of the Exhibition and of artistic works located thereon for a limited term.
48 July 15	<i>The National Arts Centre Act</i> authorizes the establishment of the National Arts Centre Corporation, the objects of which are to operate and maintain the Centre, to develop the performing arts in the National Capital region and to assist the Canada Council in the development of the performing arts elsewhere in Canada.
53 Nov. 22	<i>An Act to amend the National Housing Act, 1954</i> increases the loan ratio for rental housing from 85 p.c. to 90 p.c. of the lending value; provides that loans on existing housing be insurable on conditions similar to loans for new housing; increases to \$9,500,000,000 the amount of loans that may be insured under the Act and to \$4,000,000,000 the amount available for lending by CMHC; increases to \$350,000,000 the amount available for student housing projects and authorizes the use of such housing for other than university students; and extends for three years the time limit relating to sewage treatment projects.
60 Dec. 14	<i>An Act to amend the Canada Lands Surveys Act</i> makes revisions relating to the appointment, duties and fees of special examiners of candidates for admission as articulated pupils with a Dominion Land Surveyor and makes certain other technical amendments to the Act.
<b>1967</b>	
66 Feb. 9	<i>An Act to amend the Canada Corporations Act to facilitate the incorporation by letters patent of corporations without objects of pecuniary gain</i> provides an effective alternative to incorporation by special Act for voluntary corporations functioning in a national patriotic, religious, philanthropic, charitable, scientific, artistic, social, professional or sporting field.
77 Mar. 1	<i>The Postal Services Interruption Relief Act</i> provides relief in certain cases against loss or hardship as a result of interruptions of normal postal services.
78 Mar. 10	<i>The Canadian Film Development Corporation Act</i> authorizes the establishment of a Canadian Film Development Corporation, the objects of which are to foster and promote the development of a feature film industry in Canada, and provides for this purpose an appropriation of \$10,000,000.
90 Mar. 23	<i>The Immigration Appeal Board Act</i> provides for appeals to an Immigration Appeal Board in respect of certain matters relating to immigration.

## PART V.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; and annually from that year on in successive editions. A reprint entitled *Canadian Chronology, 1497-1960* is also available from the Dominion Bureau of Statistics. The following listing covers the year 1966 and January 1967 and it should be mentioned that certain of the dates given therein are approximate. References regarding changes in federal and provincial legislatures or ministries are not included but may be found in Chapter II on Constitution and Government or in Appendix I.

## 1966

**January:** Postmaster-General Jean-Pierre Côté announced the dismissal of Victor Spencer, Vancouver postal clerk, for his alleged participation in a spy plot. Lucien Lamoureux, M.P. for Stormont, named Speaker of the House of Commons. *Jan. 3*, Council of regents to advise on location and operation of new community colleges, to be formally known as colleges of applied arts and technology, announced by Ontario Education Minister Davis. *Jan. 4*, Second annual review of the Economic Council of Canada released. *Jan. 5*, Resignation from the Senate of Hon. Wishart McL. Robertson, Speaker of the Senate from 1953-57, announced. *Jan. 6*, In an unprecedented agreement with the Federal Government, Ontario to undertake responsibility for Indian education, housing, employment, etc., in the province. *Jan. 6-7*, Federal-provincial conference of attorneys-general; the conference approved in principle the setting up of a Central Bureau of Information similar to "Interpol". *Jan. 7*, A CNR train stranded in Fraser Valley by snow and mud slides; about 200 passengers airlifted out. Convictions in Montreal for the sale of Irish Sweepstakes tickets resulted in a fine of \$15,000 for Mrs. Francis Kelly and of \$20,000 for Anthony Sullivan. Letter of Eric Kierans, acting Minister of Revenue in Quebec, to U.S. Commerce Secretary protesting guidelines asking for reduction of U.S. companies' investment abroad revealed; on Jan. 11 a letter to U.S. Treasury Secretary Fowler also revealed; Kierans admitted a diplomatic error. Sending of emergency food supplies to drought-stricken areas of Africa (Zambia, Rhodesia, Bechuanaland and Basutoland) in co-operation with Britain and Australia announced by Prime Minister Pearson. *Jan. 7-8*, Federal-provincial welfare ministers' conference at Ottawa resulted in increased financial aid to the provinces. *Jan. 10*, Death of Prime Minister Shastri of India at Tashkent, U.S.S.R., following agreement between Pakistan and India to settle their differences without war. First meeting of the National Indian Advisory Board held in Ottawa. *Jan. 11*, Death of Senator J. W. Comeau of Nova Scotia. *Jan. 11-12*, Commonwealth Prime Ministers met at Lagos, Nigeria, to deal with Rhodesian political issue; Prime Minister Pearson's suggestion for action accepted. *Jan. 13*, Federal-provincial conference on manpower training began in Ottawa. The Federal Government announced establishment of a major test-program to upgrade the skills of the unemployed. Announcement of a \$1,000,000 long-term loan to Ceylon for the purchase of industrial raw materials under the international development assistance program. *Jan. 14*, Announcement of Canada's intention to build a \$1,500,000 technical school in Nigeria and provide temporary teaching staff. *Jan. 17-21*, Strike of 27,000 students in Quebec trade and technical schools in protest against the extension of the school year by 2½ weeks. *Jan. 18*, Pledging conference for World Food Programme held in New York; Agriculture Minister Greene appointed Chairman; Canadian contribution valued at \$27,500,000 (U.S.). First session of the 27th Parliament opened; highlights of Speech from the Throne included a national medical care insurance

program, revision of the Railway Act and the Bank Act, and establishment of a National Dairy Commission, a Science Council, a Development Corporation, and the Company of Young Canadians. *Jan. 19*, Justice Minister Cardin announced the establishment of a commission of inquiry into the case of Mr. Justice Leo Landreville of the Ontario Supreme Court, to be conducted by Hon. I. C. Rand, former Judge of the Supreme Court of Canada. Mrs. Indira Gandhi, daughter of India's first Prime Minister, Jawaharlal Nehru, elected the first woman Prime Minister of India. *Jan. 20*, Nancy Greene, Rossland, B.C., won first place in the slalom event of the "Silver Jug" women's ski races at Bad Gastein, Austria. *Jan. 22*, Deferment of the Fulton-Favreau formula for constitutional amendment, approved by a Federal-Provincial Conference in 1964, announced by Hon. Guy Favreau, President of the Privy Council. *Jan. 25*, The Supreme Court of Canada ruled Indians on reserves are not entitled to unrestricted year-round hunting rights. *Jan. 27*, Announcement of return of Portland Island, a gift of British Columbia to H.R.H. Princess Margaret in 1958, to the province for use as a provincial park to be known as Princess Margaret Park. *Jan. 30*, 100,000 Canadians aged 69 became the first persons of that age eligible for the \$75 Old Age Security pensions. *Jan. 31*, The Quebec Court of Appeals reversed the contempt-of-court conviction against Montreal author Jacques Hebert, found guilty Feb. 23, 1965 for statements in his book *I Accuse the Assassins of Coffin*.

**February:** *Feb. 2*, Report of the Senate Committee on the Aging tabled in the Senate; recommendations include a guaranteed minimum income at age 65 and opportunity for the senior citizen to maintain himself as a productive member of society. *Feb. 3*, First soft landing on the moon accomplished by U.S.S.R. unmanned space capsule *Luna IX*. Prime Minister Pearson announced economic measures against Rhodesia: (1) a ban on all imports of goods of Rhodesian origin and (2) a ban on all exports of Canadian goods to Rhodesia with limited exceptions, in addition to previous embargo on arms and oil and oil products. *Feb. 4*, Death at Baddeck, N.S., of Dr. Gilbert Hovey Grosvenor, Chairman of the Board of the National Geographic Society and son-in-law of inventor Alexander Graham Bell, at age 90. The Northwest Territories Council gave approval in principle to a plan to form the Territories into a province. *Feb. 6*, Petra Burka of Toronto, 1965 world and Canadian women's figure skating champion, retained her Canadian title. *Feb. 9*, Ontario sales tax raised from 3 p.c. to 5 p.c. *Feb. 10*, Plan for Metropolitan Ottawa as outlined in report by Commissioner Murray V. Jones released Aug. 9, 1965, rejected by almost unanimous opposition from councillors and communities involved. Strike of members of the Oshawa unit of the Toronto Newspaper Guild against the *Oshawa Times*, which began Jan. 27, settled. Correspondence with provincial premiers confirming the federal decision to raise grants to Canadian universities from \$2 to \$5 per capita of provincial population tabled in the House of Commons; the grant to the Quebec Government was understood

by Premier Lesage to be unconditional. Violence marked the 21st day of the International Brotherhood of Teamsters strike against 14 companies in Toronto and Brantford. *Feb. 11*, Second National Press Club of Canada awards for outstanding contributions to journalism presented to Ross Munro, publisher of *The Canadian*, and Stuart Keate, publisher of *The Vancouver Sun*. *Feb. 12*, Nancy Greene, Rossland, B.C., won the women's slalom title at the Canadian international ski championship competitions held at Banff, Alta., the first held in Canada under the sanction of the International Ski Federation. *Feb. 14*, Australia's monetary system changed from sterling to the decimal system, both old and new currency to be acceptable for the next two years. *Feb. 15*, Agreement in principle between the Federal and Manitoba Governments to combine in \$300,000,000 development of the hydro potential of the Nelson River, the first phase to be completed by 1971. *Feb. 16*, Death of Senator Paul Henri Bouffard in Quebec, Que. Strike of 354 teachers in Hull, Que., area ended after seven weeks in the signing of a new collective agreement; this was the last of three Roman Catholic teacher walkouts in the province since the beginning of 1966. James Garfield Gardiner, a former Premier of Saskatchewan, and federal Minister of Agriculture for 22 years. *Oct. 11,* Report of the committee study of election expenses, commenced in 1964, tabled in the House of Commons; recommendations included full disclosure of election spending by parties and candidates, equal free broadcast time to all national parties within the four weeks preceding election, limited mailing subsidies, spending limit of 10 cents an elector on advertising by an individual candidate, etc. *Oct. 13,* \$1,000,000 mail robbery at Montreal International Airport. Eleven died in explosion and fire in Monsanto Canada Ltd. chemical plant in Montreal. *Oct. 14,* White Paper on Immigration tabled in the House of Commons; designed to remove discrimination and extend sponsorship privileges. *Oct. 17,* Montreal's first subway, the Metro, went into public use. Ontario's first community college, Centennial College of Applied Arts and Technology, opened in Scarborough. *Oct. 18,* Hon. Lionel Chevrier, High Commissioner for Canada in London, appointed Commissioner-General of State Visits in 1967; Lt.-Gen. Howard Graham to co-ordinate Royal Visits and Lt.-Gen. Robert Moncel to co-ordinate visits of Heads of State. *Oct. 19,* Announcement of agreement between Britain and Canada for sale of uranium oxide from the Elliot Lake area in Canada during the 1970s. Report of the Royal Commission of inquiry into working conditions in the Post Office Department tabled in the House of Commons; widespread improvements in working conditions and new attitudes toward employer-employee relations recommended. Approval for construction of the first stage of the Mines Research Establishment near Ottawa announced; first contract awarded Oct. 26. *Oct. 21,* Coal mine slag heap in Aberfan, Wales, buried a school and several homes, killing 116 children and 28 adults. *Oct. 24,* Canada's first satellite communications station, SATCOM, began commercial operations near Mill Village, N.S. Twenty-first anniversary of the United Nations. *Oct. 24-28,* Federal-provincial premiers fiscal conference held in Ottawa; concessions to provinces for next year include about \$150,000,000 more in equalization grants and about \$150,000,000 more in aid to education. *Oct. 26,* The Appeal Court of Ontario upheld the convictions of 26 union members for contempt in picketing Tilco Plastics plant in Peterborough.

*Oct. 27,* The UN General Assembly voted to end South Africa's mandate over South West Africa. *Oct. 30,* Death of John Drainie, Toronto, outstanding Canadian radio, stage and television actor.

**November:** *Nov. 1,* INCO announced plans to more than double the production of nickel in the Thompson area of Manitoba, expenditures to be about \$100,000,000. The Canadiana Room, a collection of early Canadian art, handicrafts and furniture assembled by Prime Minister and Mrs. Pearson in the official residence, officially opened by Mrs. Pearson. *Nov. 3,* Mr. Justice E. M. Hall, Chairman of the Royal Commission on Health Services, presented with the Bronfman prize for 1966 of the American Public Health Association for public health achievement. *Nov. 4,* Floods devastated northern Italy, submerging Florence and Venice; 100 drownings reported and untold damage done to priceless works of art. Air service between Montreal and Moscow began; agreement signed by Canada and the U.S.S.R. *July 11,* Prime Minister Pearson announced a gift of \$100,000 to the UN Children's Fund in memory both of the children of Aberfan and of Dorion who died in an accident *Oct. 7.* *Nov. 10,* Mr. Justice André Montpetit appointed mediator in dispute between the Federal Government and postal employees in an effort to avert a Christmas mail strike; settlement effected *Nov. 15* by a 25-cent-an-hour pay increase and a contract to the end of *July 1967.* *Nov. 11,* Canada elected to a two-year term on the UN Security Council. *Nov. 11-19,* Royal Agricultural Winter Fair held in Toronto; Larry Hixt of Beiseker, Alta., won world championship wheat title for second straight year; James Day, Oak Ridges, Ont., on Canadian Club won the *Prix des Nations* in the international horse-show jumping competitions; and David Hasson, Ariss, Ont., won the Queen's Guineas for his Aberdeen Angus steer. *Nov. 13,* Death in Quebec City of Mme Louis St. Laurent, wife of former Prime Minister St. Laurent. *Nov. 14,* Flight of U.S. astronauts in *Gemini 12* completed *Gemini* series designed to determine man's physical limitations in orbit. Increases in disability pensions and war veterans allowances announced. *Nov. 14-28,* First strike in the 29 years of Air Canada by machinists and auxiliary workers; flights resumed following new contract increasing wages 20 p.c. and fringe benefits 7 p.c. *Nov. 16,* Prime Minister Pearson announced the appointment of a Royal Commission headed by M. W. Mackenzie, former Deputy Minister of Trade and Commerce, to conduct an investigation into Canada's national security. Death at St. John's, Nfld., of Dr. Cluny Macpherson, 87, credited with inventing the first gas masks used by Allied troops in World War I. *Nov. 17,* The UN General Assembly called on Britain to end rebellion of Rhodesia, using force if necessary. *Nov. 21,* Bower Edward Featherstone, a Federal Government employee in the Mapping and Survey Section of the Department of Energy, Mines and Resources, charged with obtaining and retaining copies of a confidential chart relating to Canada's maritime defence. *Nov. 22,* Canada Council Medals for contributions to Canadian arts, humanities and social sciences presented to Morley Callaghan, author; W. A. Mackintosh, economist; Norman McLaren, film-maker; and Jean-Paul Riopelle, painter. *Nov. 23,* The Ontario Securities Commission began an investigation into the financial affairs of Prudential Finance Corp. Ltd., now under the control of a trustee. *Nov. 25,* Canada to contribute \$500,000 to a special Canadian Fund for aid to the people of Italy suffering from disastrous floods; public subscriptions invited. Riots in Vancouver on the eve of Grey Cup game. *Nov. 26,* The Saskatchewan Roughriders won the Grey Cup for the first time, defeating Ottawa Rough Riders 29-14. *Nov. 29,* At inquest into deaths of nine workers, deficiencies in the supporting wooden framework blamed for

the collapse of Heron Road Bridge on Aug. 10; O. J. Gaffney Construction Co. of Stratford and M. M. Dillon Consulting Engineer Co. of London held responsible. *Nov. 30*, Barbados became an independent nation within the Commonwealth after 339 years of British rule.

**December:** *Dec. 1*, Death of Senator Stanley S. McKen of Vancouver. *Dec. 2*, Joseph B. Brien, President of insolvent Prudential Finance Corp., arrested on theft, forgery and uttering charges. U Thant reappointed Secretary General of the UN for a five-year term. Death in Toronto of Ralph Allen, war correspondent, author and editor. *Dec. 8*, B.C. longshoremen's strike ended after three weeks. *Dec. 10*, Canadian women's curling team from Unionville, Ont., skipped by Mrs. Helen Jewett, won the world championship in Scotland. *Dec. 14*, Royal Assent given to Act to Incorporate the Bank of British Columbia. Presentation of the first Outstanding Achievement Award of the Public Service of Canada to Dr. Wilfrid Bennett Lewis, senior Vice-President (Science) of Atomic Energy of Canada Limited, by Mme Georges P. Vanier at Government House. *Dec. 16*, Threatened strike of air traffic controllers scheduled for Dec. 20 averted by agreement of Federal Government to pay salary increases averaging 13 p.c. *Dec. 19*, Finance Minister Sharp announced a 1-p.c. increase in the federal sales tax and higher payments for those in the higher income brackets for Old Age Security Tax. *Dec. 20*, Report of the Commons-Senate Special Joint Committee on Credit and Prices tabled in the House of Commons; recommendations include establishment of a government Department of Consumer Affairs, more simplified information concerning consumer prices and wider consumer education. *Dec. 21*, The Medical Care Act received Royal Assent; to come into effect July 1, 1968. An amendment to the Old Age Security Act received Royal Assent; provides for an additional \$30 a month to needy persons on the \$75 old age pension. Eight children died in the collision of a school bus and a sand truck near Windsor, Ont. Death in Toronto of Capt. Merton Wesley Plunkett, who organized the World War I entertainment group known as the Dumbells. *Dec. 23*, Premier Thatcher of Saskatchewan announced that the farm home near Borden, Sask., where former Prime Minister John Diefenbaker spent his early childhood, will be moved to Regina and restored as part of the Wascana Centre as a tribute to the only Saskatchewan citizen to become Prime Minister of Canada. Isabel LeBourdais, author of *The Trial of Steven Truscott*, named Woman of the Year by Canadian Press women editors. *Dec. 29*, Under a federal-provincial program for transforming the economic base of Cape Breton Island, the remaining coal mines in that area will be phased out gradually and new industry brought in. *Dec. 31*, Report on graduate studies and research in Ontario recommended that Ontario's 14 provincially supported universities be amalgamated into one institution with many campuses. Retirement of Donald Gordon as President of Canadian

National Railways after holding office for 17 years. Canada's Centennial Year ushered in with a ceremony on Parliament Hill in which Prime Minister Pearson ignited the Centennial Flame inside the main entrance to Parliament Hill.

## 1967

**January:** *Jan. 1*, Mme Georges P. Vanier, wife of the Governor General, dedicated Canada's Centennial Train at Ottawa prior to its departure for Victoria where it began, on Jan. 9, an 83-stop tour of Canada. *Jan. 4*, Dr. Helen Hogg, University of Toronto, awarded the Rittenhouse Silver Medal by the Rittenhouse Astronomical Society for her study of variable stars; she was the first Canadian and the second woman to receive the honour. *Jan. 5*, Death of David Roger Mitchell, M.P. for Sudbury. Federal proclamation that Jan. 11, 1967, the birthday of Sir John A. Macdonald, be commemorated across Canada in observance of his place in history as one of the Fathers of Confederation and the first Prime Minister of Canada. *Jan. 9*, Hon. Walter L. Gordon reappointed to the Federal Cabinet. Death in Winnipeg of Manitoba's Lieutenant-Governor, Hon. Errick F. Willis. *Jan. 11*, Canada's tallest and newest hotel, the 38-storey Chateau Champlain in Montreal, officially opened. *Jan. 13*, Nancy Greene, Rossland, B.C., won the Swiss international ski championship. *Jan. 14*, Large-scale strike by Roman Catholic elementary and secondary school teachers closed hundreds of schools in Montreal and Trois-Rivières; Mr. Justice André Montpetit of Quebec Superior Court appointed by the Quebec Government Jan. 17 as mediator. Death of Hon. J. L. Ilsley, former Minister of National Revenue, Minister of Finance and Minister of Justice. *Jan. 18*, Yellowknife, N.W.T., officially named capital of the Northwest Territories. *Jan. 23*, Special ministerial committee created to study the implications of foreign ownership and control of Canadian industry, headed by Hon. Walter L. Gordon. *Jan. 24*, The British Columbia Legislature opened its 28th Legislature at New Westminster in commemoration of the opening of the first session of the Legislative Council of the United Colony of British Columbia which merged the colonies of Vancouver Island and British Columbia in New Westminster one hundred years ago. *Jan. 27*, Col. Virgil Grissom, Lt.-Col. Edward White and Lt.-Cmdr. Roger Chaffee, crew of the U.S. *Apollo* spacecraft project, died in a fire on the launching pad. *Jan. 29*, Valerie Jones, Toronto, and Donald Knight, Dundas, Ont., won the Canadian senior singles figure-skating championships in Toronto. Explosions occurred at Yugoslav embassies and consulates in six North American cities, including Ottawa and Toronto; buildings were damaged but there were no injuries. *Jan. 30*, Bank of Canada interest rate reduced to 5 p.c. from 5½ p.c. City of Montreal clerical workers went on strike, closing down municipal courts, the social welfare department and the City Hall.

## APPENDIX I

### CONSTITUTION AND GOVERNMENT

Certain information given in Chapter II on Constitution and Government (closed off Oct. 1, 1966) is up-dated in this Appendix.

#### Page 85, Table 2

His Excellency General The Right Honourable Georges P. Vanier, D.S.O., M.C., C.D., died Mar. 5, 1967. The Hon. Roland Michener, P.C., Q.C., was appointed as the 20th Governor General of Canada on Apr. 4, 1967 and sworn in on Apr. 17, 1967.

#### Page 87, Table 4

On Jan. 9, 1967, the Hon. Walter L. Gordon was appointed Member of the Administration, precedence following the Hon. Paul Theodore Hellyer.

On Apr. 4, 1967, the Hon. Lucien Cardin resigned as Minister of Justice and Attorney General; the Hon. Guy Favreau resigned as President of the Queen's Privy Council for Canada; the Hon. Walter Gordon was appointed President of the Queen's Privy Council for Canada; the Hon. John Turner was appointed Registrar General of Canada; Pierre Elliot Trudeau, Parliamentary Secretary to the Prime Minister, was appointed Minister of Justice and Attorney General; and J.-J. Jean Chrétien, Parliamentary Secretary to the Minister of Finance, was appointed Member of the Administration.

#### Pages 88-89, Table 5

On Jan. 11, 1967, the Prime Minister announced that His Excellency the Governor General had approved his recommendation that the Premiers of the Provinces be appointed to be members of the Queen's Privy Council for Canada, to be sworn in at a later date.

The Rt. Hon. James Lorimer Ilsley died Jan. 14, 1967.

Mme Georges P. Vanier was appointed a member of the Queen's Privy Council for Canada on Apr. 11, 1967.

#### Pages 91-92, Table 8

The Hon. Douglas Everett was appointed Senator for Manitoba on Nov. 8, 1966. Senators appointed Apr. 6, 1967: the Hon. Maurice Lamontagne, P.C., Montreal. Que.; Mrs. R. A. Kinnear, Port Colborne, Ont.; Keith Laird, Q.C., Windsor, Ont.; and Andrew Thompson, Kendal, Ont.

The Hon. Adrian K. Hugessen resigned as Senator for Quebec on Jan. 1, 1967. The Hon. Stanley Stewart McKeen, Senator for British Columbia, died on Dec. 1, 1966; the Hon. William Rupert Davies, Senator for Ontario, died Mar. 11, 1967; and the Hon. Alexander Neil McLean, Senator for New Brunswick, died Mar. 12, 1967.

#### Pages 95-100, Table 10

R. Mitchell, Member of the House of Commons for Sudbury, Ont., died Jan. 5, 1967.

Footnote<sup>1</sup> (p. 96)—by-election for Hull electoral district had not yet been held at the date of going to press.

#### Page 118, Government of the Yukon Territory

R. G. Cameron retired as Commissioner, dated May 31, 1966, and James Smith was appointed Commissioner on Oct. 14, 1966.

#### Pages 118-119, Government of the Northwest Territories

B. G. Sivertz retired as Commissioner on Jan. 16, 1967; Deputy Commissioner Stuart M. Hodgson was appointed Commissioner and John H. Parker, Deputy Commissioner on Mar. 2, 1967.

An Act to amend the Northwest Territories Act (SC 1966-67, c. 22), which received Royal Assent on June 2, 1966, authorized the addition of three elected members to the Council of the Northwest Territories. The following were subsequently elected: Simonie, E7-551 for Eastern Arctic electoral district; Duncan Pryde for Central Arctic electoral district; and Robert Williamson for Keewatin electoral district.

On Jan. 18, 1967, Yellowknife became the capital of the Northwest Territories.

## APPENDIX II

### POPULATION

The statement was made on p. 182 that this Appendix would include as many of the population figures from the 1966 Census as were available at the time of going to press. However, it was found that the first 1966 Census data would not be ready for distribution for about two months following the cut-off date for inclusion of material in this volume. As stated in the Population Chapter, a list of publications of the 1966 Census is available, on request, from the Queen's Printer or the Dominion Bureau of Statistics.

Since the printing of the Population Chapter, population estimates by province as at June 1, 1966, have become available and elements of population growth from June 1, 1961 to June 1, 1966 are shown in the following table. Total population as of June 1, 1966 was estimated to be 19,919,000, an increase of 9.2 p.c. during the five-year period; this compares with a 13.4-p.c. increase between 1956 and 1961 and one of 14.8 p.c. between 1951 and 1956. The slowing down of the rate in the latest five-year period is partly accounted for by the marked drop in the birth rate in Canada from 26.1 to 21.4 per thousand population, reflecting the decrease in the number of births from 475,700 to 418,595.

The number of births over the whole 1961-66 period was about 2,250,000 compared with 2,362,000 in the previous census period, a decrease of 112,000. In the same comparison deaths were 45,000 greater, resulting in a decline in natural increase of 157,000. The falling-off in immigration in the later five-year period was even greater, being 539,000 compared with 760,000 in the previous period, and, because emigration was estimated to be about 30,000 greater in the 1961-66 period, the decrease in net migration was 251,000. It should be noted, however, that immigration has increased each year since the low point of 1961; in 1966 it reached a total of 194,743, more than two and a half times the 1961 figure.

Among the provinces, population growth over the 1961-66 period was especially marked in British Columbia where the increase of 233,000, or 14.3 p.c., was largely accounted for by the heavy movement of people from other provinces; net interprovincial population gain recorded by that province since 1961 was estimated at just over 100,000. The only other province showing a net gain in this period through interprovincial migration was Ontario, where it amounted to just over 50,000. Immigration was also an important factor in Ontario's population growth, which amounted to 659,000, or 10.6 p.c., since 1961; some 287,000 or a little over half of all immigrants to Canada between 1961 and 1966 settled in that province. Newfoundland also recorded an increase in population of just over 10 p.c. during 1961-66. The growth rates of Alberta and Quebec at 9.9 p.c. and 9.2 p.c., respectively, corresponded closely with the Canada rate but the Maritime Provinces, Manitoba and Saskatchewan all showed an average rate of increase of less than 1 p.c. per annum.

**Elements of Population Growth, June 1, 1961 to June 1, 1966**
